Yep, 35 years later they've got Collins. Keepin' up with the times.

-40C and -40F are not roughly the same point, they are EXACTLY the same
point.

(Celsius * 9/5) + 32 = Fahrenheit
(-40C * 9/5) + 32 = -40F

That's right, "William", I've got a modified 75A-3 which is about 51 years old, a 51S-1 which was produced in the late seventies and a KWM-2A which was built about the same time as Len's Icom R-70 receiver. I have an Orion which was produced last year.

I also have other functional ham gear from the twenties, thirties, forties, fifties, sixties, seventies, eighties and nineties. I'm keeping up with the times--ALL of 'em.

> magazines, books, manuals, etc. The picture shows only a small part of the

> library.
>
> >(archives of the renowned historian no doubt). :-)
>
> Who would that be?

I think he means you, Jim. Our Leonard seems to be bothered that you have the information contained in those magazines. It gives you unfair advantage over him.

I have the QSTs, the whole run of CQ, nearly the whole runs of EI and Pop'tronics, the whole run of the now-defunct Ham Radio and most of HRH. Add to that a ten-year run of ER, five years worth of Radio Amatoori (Finnish), about ten years worth of RadComm, some miscellaneous issues of ham mags from Japan, Germany, Denmark, Italy and Russia, ten or so years of Radio, loads of old Radio and Radiocraft mags.

I'm sure it'll come as no surprise to Leonard that my funeral pyre will be fueled with those magazines. I'll lie in a rack cabinet as I'm sent off to the amateur radio valhalla. A special A-1 Op Club honor guard will be present. The ceremony will be performed by local members of the Royal Order of Wouff Hong.

That's right. That portion of the radio spectrum used by radio
amateurs.
That's the portion of the spectrum of concern to those in this
newsgroup.

> Amateur licenses aren't legal for out-of-amateur band transmission
> even if one has a four-on-the-floor extra license.

Right again. We all knew that. It hasn't bothered us in the least.

No non-amateur-licensee can possibly operate legally on Field Day? I'd think you'd get one right once in a great while, Leonard. That response would be wrong.

> >about subbands and synthesizers to be completely without basis in fact.
>

> Tsk. That's not a post. Your judgement is a post hole.

I take it that you really can't defend your earlier statements. The end result is that you're reduced to answering with the nonsense above.

> >The plain simple fact remains that Len has not had to deal with
> >subbands-by-license-class in amateur radio. Or any other amateur-radio
> >issues. His observations are those of a spectator only, not a participant.
>
> Tsk. Jimmie want to dismiss the FCC because the FCC does not
> require any commissioner or staff to hold amateur radio licenses?

There are some things you just don't get no matter how many times the explanation is provided for you: The FCC staff gets paid to regulate and administer amateur radio in the U.S. They aren't spectators. We are participants. We're not spectators. You are neither a regulator nor a participant. Have you grasped the concept?

> >Actually, I don't think Len invented *any* of the circuits or systems now used

>
> Tsk. Recycling old parts circa-1990 and using vacuum tubes is
> hardly "invention." :-)

You walk a few steps and then you trip. It was written that YOU didn't invent any of the circuits or systems used in "modern ready-built" radios.
He didn't claim that he invented the recycling of parts and vacuum tubes.
You really need to pay attention.

> But, Jimmies qualification is the phrase "Not any radios I know of,
> anyway." That imperious declaration infers he is judge, jury, and
> supreme court of all "radio" that is meaningful anywhere, anytime.
> :-)

I really have no trouble accepting that you believe that is what Jim's phrase meant.

...at least as written by you.

> Tsk, tsk. If Davie had actually worked in USAF communications
> he would have KNOWN that military communications does not
> engage in "radiosport contests" nor does it "QSL."

Tsk, tsk. I did actually work in USAF communications. Since you were
in the Army and since you wrote the confusing piece above, I thought
perhaps you Army types did things differently. Nothing I encountered in
Air Force communications caused me to lose interest in DXing, contesting
or QSLing.

> 24/7 radio communications on HF (or any other EM spectrum) is
> professional-quality work for the military.

So the guys who work in stations which aren't open twenty-four hours per day, seven days per week aren't doing professional quality work in the military? If you worked in a station which was open around the clock and you worked for eight to ten hours per day and got a day or two off from time to time, was your work less than professional quality?

> >So am I to understand that you have
> >no actual experience in DXing, contesting or QSLing?
>
> Define "DXing." If that means listening to radio broadcasting stations

Nope, that isn't it.

> If that means working distant HF stations on a two-way, full duplex
> basis over 8000 miles away 24/7, yes, I have experience in that.

Nope, that isn't it.

> If that means "only" having an amateur license and making out like
> the world's greatest amateur (windbag), no, definitely no experience
> in that.

Don't sell yourself short. All you need now is the amateur radio license.

> >I fail to see what difference that makes. Why should we, as radio
> >amateurs, posting in an amateur radio newsgroup, be concerned about what
> >qualifications are required for other services? Is is your aspiration
> >to participate in other radio service? Please, go forth and do so.
>
> Tsk. Why does Davie want to abrogate the First Amendment and
> deny citizens the right to petition their government for change in
> federal regulations?

Have you petitioned your government? Have you posted here? End of story.

> Don't you understand that neither FCC commissioners nor FCC
> staff are NOT required to have amateur radio licenses...and they
> regulate ALL U.S. amateur radio.

I seem to understand it far better than you do. They are paid to administer amateur radio. We radio amateurs are participants. You are not a paid administrator nor are you a participant. You are a bystander.

> Tsk. You should really drop the arrogant "show your papers!"
> and elitist demand-by-intimidation-attempt that this newsgroup
> "belongs only to already-licensed hams."

You have had no amateur radio license. You currently have no amateur radio license. You've told us that you have no intention of obtaining an amateur radio license in the future. You don't look good as a potential licensee, Leonard.

> YOU don't, nor ever have, regulated or controlled U.S. amateur
> radio. You are only a participant.

Only? Without the participants, there'd be no amateur radio to regulate.
The participants ARE amateur radio, "William".

> You aren't gang boss, aren't
> a government official, aren't even a 'hood chieftan. All you are
> is a participant.

Let's see....I'm one of the items from your list. You are which one?

> What is at stake is a possible restructuring of U.S. regulations
> on amateur radio to eliminate or retain the morse code test for an
> amateur license having below-30-MHz privileges.

Really? That'll effect you how?

> YOUR ranting and raving is confined to nastygramming anyone
> who wishes to eliminate that code test. It isn't "civil discourse"
> much less discussion. YOUR ranting and raving is about
> control over who can post and who cannot. Clue: This newsgroup
> is unmoderated and open to anyone with Internet access.

You're still posting aren't you?

> Try, oh TRY to get used to the fact that neither you nor Jimmie
> are the Supreme Arbiter of Ham things. No one MUST do as you
> say.

I'd think you'd want to remember those words of yours. You, especially as one who has no stake in amateur radio, are not the Supreme Arbiter of Ham things. Neither the regulators nor the participants in amateur radio are compelled to do as you say.

> There is still some freedom left in the world and considerable
> independent thought.

Your thought is....well....really, really, really independent.

> Your long tenure in hamdom does not give
> you any "position" of control over others. Not here, not anywhere.

Thous sayest.

> Try to adjust to that, big Arbiter. Bite me.

Is this more of the civil discoarse course (coarse)?

How are you involved? Wanting to win at something and being competitive
are part of being human. Don't want to participate in an amateur radio
contest? Don't enter. Oh, that's right--you couldn't enter if you
wanted to.

Don't you ever try to impress folks who visit your shack, Len? You know, take 'em in to view the R-70?

>Yep, 35 years later they've got Collins. Keepin' up with the times.

Or, on the cheap side of the coin, "recycled" parts using mainly technology that is 50 to 40 years old (K4YZ homepage). Geez, absolutely zilch time spent in trying to make any of it attractive. Not the stuff of "marketable design!"

Collins Radios, back when tubes were king, were REAL boat-anchors...and performed very well although their specifications were not great in sensitivity nor in IMD. I've aligned and calibrated enough R-391s (the R-390 with motorized tuning added, electronics the same) to be familiar with them.

Kellie is going to name- and number-drop (once he refreshes his memory on old advertisements) that HIS gear is "the best" and "superior" and anything that an NCTA has is "crap." HIS "engineering examples" all involve machinery things, never electronic stuff. Must be difficult for those who "sit at captain's tables" to regress and crack open a theory book, huh?

We can't complain about that because the PCTA are royalty and thus above reproach...but I complain anyway since I know that electrons, fields, and waves don't much give a snit which radio service it is or how the modulation is made. Can't convince the PCTA of that. Color them inviolate.

>I think Len would prefer that all of amateur radio be channelized.

WRONG. INCORRECT. My opinions are based on FACTUAL
evidence of over a half century of observation.

One of those observations is the NON-civil diss-cuss technique
of alleged mind-readers who imagine what I think. I've said
NOTHING about "channelizing" any ham band. But the FCC has
given U.S. hams five "channels" to play with.

>>> >Repeatedly proven to be incorrect, in error, and without any basis in

>
>The Morse Code test was not mentioned at all, but Len cannot see any other
>issue.

Hello? The message thread title is "US Lincensing Restructuring ???
When ???" At stake are some 18 petitions sitting at the FCC waiting
for someone there to put together an NPRM. Most of those petitions
involve the retention or elimination of the morse code test.

Jimmie and Davie (those 'sweethearts') feel that folks in here must
talk ONLY about the subjects THEY approve of?

>>...as compared to your attempting to take over the flow of debate with
>>your pet fun and games and promoting the abolition of morse code testing
>>in an endeaver in which you play no part?
>>
>>> But, you consider yourself Superior and therefore "must" triumph
>>> in all things. :-)
>>
>>Don't you mean "but you've proven me wrong and I just can't abide that"?
>>
>bingo!

Tsk...I've not "been proven wrong," just issued the usual baseless
non-facts by PCTA determined to damn every NCTA they can
find.

>>> >The K2 has a single-loop PLL LO that achieves very low phase noise by
>>> >an ingenious design. This design intentionally trades off some
>>> >accuracy and general coverage reception in order to improve phase
>>> >noise, simplicity and power consumption. Its performance against
>>> >"ready built" transceivers costing much more is well documented.
>>>
>>> Jimmie has a K2. Naturally it is "superior" to all others.
>>
>>That's funny, I didn't see that written. Do you suppose it is
>>ego-driven as well?
>
>Not by my ego...

1. Jimmie "designs and builds his own equipment."

2. Jimmie has often praised the Elecraft K2 that he built.

Conclusion: Jimmie is claiming design of the K2...yet his
name is not at the Elecraft company.

That's all in Google and there more than once. Jimmie will deny
it but there it all is.

>>> >It wasn't designed by Len. I doubt very much he understands how it
>>> >works, nor could he explain it....;-)
>>>
>>> Jimmie designed the K2? :-)
>>
>>Do try and stay with the flow. He said it wasn't designed by you.
>>
>>> >Which is to say, none of them are perfect!
>>> >
>>> >Len's errors here prove he's not perfect either...
>>>
>>> Heavens...Jimmie wants PERFECTION in all things!
>>
>>Don't you strive for perfection, Leonard, or are you happy with slapdash
>>design?
>>
>>> Naturally, PCTA extras are "always perfect" in everything?
>>
>>I'm sure it seems that way to a guy like yourself.
>>
>>> Of course they are. They will tell you right off... :-)
>>
>>Actually, telling you off isn't at all unpleasant.

"It just seems to write itself!" :-)

>>> Doesn't bother me a bit. :-)
>>
>>Not much, it doesn't.
>>
>>> I've still "done" modes, modulations far more than is allowed in the
>>> U.S. ham bands. [that even includes CW, heh heh heh]
>
>I don't think Len has operated using Morse Code.

Quite true. Most manual scalpels are metal, the RF Cauteries
use continuous wave, no keying. Operations are done with both.
The most "operating" I've done is removal of splinters. I'm not
allowed to "operate" on anyone by law. Are you two Clingons?

The spliners resulted from normal wear and tear remodeling this
house, a mere four rooms worth, that including a center room
workshop with a bench 104 inches long with five 19" racks (also
hand built) above and below the bench. And I'm not a licensed
cabinetmaker and never had to use morse code once to do any
of that remodeling. :-)

>>Why are you always living in the past?
>>

Poor baby, still feel hurt at not being "respected" for that vaunted
extra class status?

I was NOT thinking what you imagined. I was thinking that a sales
outlet that didn't know about its product nor could offer to help
potential customers find out, wasn't a very good business. To this
day I won't look to HRO for "technical answers."

>>> I'll have to go back to old checkbook transactions to find the
>>> purchase date (one has to be EXACT for Jimmie da Perfectionist).

>
>It also won't transmit....

Duhhhh...receivers aren't designed or manufactured to transmit.

That's what transmitters do. They transmit.

Have you got that straight yet?

>Of course, what we see here is another classic case of Len's behavior that can
>be summed up in one sentence: Do as Len says, not as Len does.

Yeah. I believe in freedom and liberty and less-restrictive government
regulations. Independence of thought allowed, not restricted, and
separation of church and state continued so as to separate the
Church of St. Hiram from the FCC.

Tsk. I know that isn't in your ethos or mythos since you two Clingons
demand that ALL follow your example, doing as you did.

Why are you two Clingons so anal-retentive on holding everyone to
outdated standards and practices?

??

Not everyone likes sports, either. Particularly when the roads are clogged with people going to and from the stadiums, TV programs are preempted for sports coverage, etc.

Were the recent Olympics all about "contests for the simple reason that they are contests, organized by contestant-wannabes so that they can Win and show off that they are "better" than the non-contestants"?

Perhaps we should inform the IOC.
>
>How are you involved? Wanting to win at something and being competitive

>contest? Don't enter. Oh, that's right--you couldn't enter if you
>wanted to.

Len can enter any amateur radio contest he wants to. All that's needed is for him to obtain a valid amateur radio license, and an amateur radio station. His choice of home location may be more suited to listening to cbers on the nearby freeway than to working the rest of the USA, however.

>If he doesn't have enough, I'll give 'em to him. If I die first, I'll
>will them to him.

Thank you, Dave!

In fact, I've been reducing my tube and parts stock because I have far more than enough. It would be wonderful if I could live long enough to wear them all out!

The fact remains, however, that a lot of solidstate electronic devices (including ham gear) were made with custom parts which can be difficult or impossible to find, or even identify. End result is "can't fix it because the parts cannot be had". It is probably easier to restore a 40 year old R-390A or 75S3 than a 20 year old R-70, if certain parts are needed.

Of course this is driven by a whole bunch of factors, ranging from increased reliability (if it doersn't break you don't need to be able to fix it) to length of production (the R-390A was manufactured for at least 30 years by a number of companies, including a few made under a contract awarded to Helena Rubenstein), to the fact that newer electronics are often not designed to be fixable, and are meant for a limited design life - if it fails, you just get a new one.

Of course there are exceptions, like Ten Tec's policy of board-swapping. And there are specialists who can bring almost anything electronic back to life.

One of the design parameters of all my homebrew projects is that the result must be serviceable with parts and tools on hand. Nothing is built with "one of a kind" or rare parts, and nothing is pushed hard. Result is that I've had very few problems.

>He can have enough to see him through his lifetime.
>Does that suit your definition of "always"?

I hope to outlive my supply...

>> Of course...you can "recycle" them...somewhat after their useful
>> life...and "impress all who visit your shack."

??

A recycled component is still in its useful life, because I'm getting use out of it. Nothing in the Type 7 is "after its useful life".

And when a tube finally fails, its base is often useful as a connector or plug-in coil form. Other defective components sometimes yield useful parts, too. Nothing goes to waste at N2EY.

>Don't you ever try to impress folks who visit your shack, Len?

What impresses folks most is that I can recall schematics and other info from memory.

>You
>know, take 'em in to view the R-70?

He bought it for CASH, Dave ;-) Somehow, that is supposed to be significant.

I find it interesting, though, that Len does not tell us of *his* homebrew radio projects. Frankly, I would have thought that he designed and built his own receivers, rather than buying a ready-built imported unit like the R70. A person doesn't need any knowledge or skill in radio-electronics to buy or use one of those.

73 de Jim, N2EY

And while we're on the subject, how about these specs for a new receiver:

MDS -135dBm
AM Sensitivity -110dBm
Blocking Dynamic Range 5Khz 119dB, 20Khz 119dB
3rd Order dynamic Range 5Khz 87.7dB, 20Khz 95dB
Image rejection >152dB
IF Rejection 106dB

No, it's not the Southgate Type 7.

>No non-amateur-licensee can possibly operate legally on Field Day? I'd
>think you'd get one right once in a great while, Leonard. That response
>would be wrong.
>
No, he's right, Dave.

FCC specifically defines the term "operate an amateur radio station". It means to be the control oeprator, responsible for rules compliance. By definition, only a licensed ham can do that. Others "participate in amateur radio". Len cannot legally operate an amateur radio station, according to FCC. Nor can Michael Powell, for that matter.

But all that is besides the point. What matters most in amateur radio - or any field of endeavor, really - is what is actually done, not what's theoretically possible. That's the point of the story about my highschool friend who had lots of great ideas (and lots of criticism) but no station of his own. The computer folks have a word for it: Vaporware.

Who do you have more respect for, Dave:

The person with a modest amateur station who is actually on the air making QSOs

or

The person who talks endlessly about "state of the art", "better modes and modulations", "the future of amateur radio", "progress", etc., etc., yet who isn't on the ham bands at all?

??

The entire run of QST is available on CD-ROM, so the info is available to anyone willing to spend the $$. (I spent a lot less on the paper mags, but they take up more space and it's taken me decades to build up the collection).

>I have the QSTs, the whole run of CQ, nearly the whole runs of EI and

That's more extensive than my collection. But if you really want to see a radio library, go to the AWA annex.
>
>I'm sure it'll come as no surprise to Leonard that my funeral pyre will
>be fueled with those magazines.

Please don't! Future generations will be deprived of those magazines if you burn them. Much of my collection was saved from destruction by hams who would not let them go to the dump or incinerator. Same for the parts.

I know an amateur (not me) who was *given* a near-complete collection of QST by an elderly ham who knew he would soon be SK. He had saved every issue from the post WW1 reawakening to the prsent day. He had many duplicates, too. It took 3 trips in a Citation to move them all.

>I'll lie in a rack cabinet as I'm sent

.-.

> Made the circuit boards meself and all.

Lotta jollies there if yer into such things. I "burned" a number of
homebrewed circuit boards, late '60s? Something like that. Making PCBs
then was basically a drafting and photographic process which
"integrated"nicely into my darkroom "assets" so I went at it a few
times. Translate the circuit diagram in QST to a physical layout for
openers. Yeah, they can draw circuits which show conductors leaping
over other conductors without shorting them but that don't work on
single-sided boards dammit! Which all homebrewers could do then. Dunno
how you did yours but there were complete PCB "kits" available from
Kass and Radio Shack when I did mine.

They provided sheets of transfers with "donuts" for wire and component
connections and IC pinouts all of which were layed out on a
transparent film. Then ya *very carefully* connected all the dots with
thin tape to make the conductor traces. Tedious. Net result was a 1:1
photograhic negative of the circuit. From there it went into the
darkroom where the negative was positioned over a piece of sensitized
board stock and exposed, developed, neutralized and washed just like
all photos are developed even today. I did a few boards which I
sensitzed myself.

The rest was easy. Drill all the holes, trim the board to size and
stuff it with the components. Then go back and solder-patch all the

busted traces! Hee!

I guess I did ten boards all told. Three keyers, one a monster K3JH
developed which was first large-capacity memory keyer, several
stripline SWR bridges, a vacuum relay QSK TR switch, etc. I think I
showed you some of those "works of art" before I dumstered all that
old crap. I have a yen now to build a couple more widgets using
homebrewed PCBs but so far I have not been able to find the board
stock or chemicals in hobby quantities.

That leaves Sweetums and his half-vast "experience" out. Long-haul
military HF comms are channelized and if a station is weak they just
twist the Variac clockwise. 40kW with rhombics just to push RTTY from
Tokyo to the west coast . . SPARE me . . !

. . . boink . . POINT!

It's no big deal at all. As far as the "math" goes any kid who has a
decent grip on 9th grade alegebra can hoof thru it, this is not double
integral or tensor analysis country. All one needs to pull it together
is the material physical properties and the ability to jiggle a few
simple algebraic equations which are only a half-step beyond jiggling
Ohm's Law. All of it is readily available out on the Web and it can
all be done with a pencil and a calculator.

Typical materials info source:

http://www.matweb.com/SpecificMaterial.asp?bassnum=MA6016&group=General

Here's a taste of the number-crunching:

http://hsc.csu.edu.au/engineering_studies/civil_structures/bending/bending_stress.html

For my own part I've gotten into semi-automating the whole process in
order to design widgets like tapered aluminum yagi elememts,
fiberglass quad (squalo?) spreaders, masts and towers. I run a LISP
rountine in Autocad to come up with the cross-sectional properties
then diddle the rest in Excel or Mathcad or a slick little $50

shareware program called "DTbeam" which is a finite elememt analysis
beam analyzer. The M.E.'s version of a Java-based Smith Chart solver.
Sort of.

http://www.dtware.com/

>
> Tsk. You haven't spent much time with a spectrum analyzer...

Sure have. You can nitpick over the minor points but the main thing is correct: Frequency synthesizers do not produce perfectly clean LO signals, and that phase noise in the LO causes performance degradation in HF ham gear.

> >Trouble is, in the amateur HF environment we often want to listen to a weak

> other
> >various nonlinearities in the front end - it's due to phase noise alone.
>
> Tsk. Simplistic untruth.

No, it's true. You just don't understand the point.

I should have included a clarifying phrase in the above, but I thought the average technically knoweldgeable reader would understand the point anyway.

The clarifying phrase is:

"Even with an ideal receiver front end"

meaning that even if IMD and IP3 aren't causing problems, phase noise *alone* can cause the apparent noise floor to rise if there are strong adjacent-channel signals.

Note how, in lab tests, there is sometimes the annotation "noise limited" when certain tests are made. What do you think that term means?

>
> Intermodulation distortion and front end noise is enough to cause that.
> As part of the IMD, the 3rd Order Intercept point values figure in.

Only if the LO is clean enough to allow it. Note how, in lab tests, there is sometimes the annotation "noise limited" when certain tests are made. What do you think that term means?
>
> You can get IMD in stages beyond the mixer. To "prove" that point,
> you would have to measure the IMD at various gain settings (manual
> or AGC).

Of course. But even in an ideal signal path, phase-noisy LOs can degrade performance. That's the point. Note how, in lab tests, there is sometimes the annotation "noise limited" when certain tests are made. What do you think that term means?

> The worst part of that untrue statement is that "all those other things"
> were existant before the advent of frequency control by synthesizer.
> In ham radios as well as the radios in every other radio service.

Nobody denies that. However, in many sets the phase noise is the limiting factor. Particularly in real-world situations.

> >1 Hz is common in modern manufactured amateur equipment. But that's not
> >really the issue.

> equipped with a handle on the side, apparently for that purpose. :-)
>
> But, you will try to use my owning an R-70 as all sorts of denigrations.

Like what?

R70s were made 1982-84 (approximately), so the design is at least 23 years old (1981). You frequenctly denigrate others as "behind the times", yet the R70 is the newest/most modern piece of HF radio equipment you mention owning. Just another example of "do as Len says, not as Len does".

> Kellie did...and was completely wrong...but then he only "favors" those
> equipments that he's owned or has handled.

Just like you, Len ;-)

Have you ever used the receiver he mentions?
>
> >How many points did Len get with it in the last CQWW? Or even the last SS or
> >Field Day?
>
> Irrelevant.

No, completely relevant. One important measure of amateur equipment
quality is how it performs in actual on-air operation.

> Had I an HF-privilege ham license, I wouldn't bother with
> contesting. I've said that before.

So the answer is: Zero.

There are VHF/UHF contests - including Field Day.
>
> If I wanted sports, I would go to athletics...REAL sport.

Who decides what is "real sport"? You're not the IOC. Or TAC ;-)

> [if I wanted "road races," I'd get a sports car as I used to have and
> do minor gymkhanas, etc., in REAL road races]

The term "road race" is not limited to motor vehicles. It's
understandable that you don't like sports.

> >btw, some years back I was there, at NIST in Boulder. Saw the various

> Okay, so your resume got rejected.

Nope. Didn't bring one; wasn't looking for a job.

> Sorry to hear about it. Glad you
> got nice pictures.
>
> Anyone can see nice pictures at the NIST website.

Not the same as being there. It seems you enjoy only second-hand
experiences.

> >Still living in the past...
>
> Tsk. You are repeating yourself...as you've done many times in the

Not nearly so many times as you, Len. ;-)
>

> Poor baby. Still with the insults sugar-coated with hypocritical
> "civility?"

Are you insulted? Why?

The above story is true. The ham involved (actually an ex-ham; he no longer shows up in the database) behaved exactly as described. He probably went on to a career in electronics in some capacity or other. And as I said, most of his ideas were pretty good - he just never carried them to completion or even to partial implementation. At least he held a ham license for a while - you haven't even done that.

You *do* sound just like him, Len. Lots of words and lots of put-downs and lots of theory. But in terms of actual radios built on your own time, with your own resources, from your own design....nada. Zip. Zilch. Zero. Nothing. Not that anyone here knows about in all your years and petabytes of posting.

I even looked through the online database of ham radio magazine articles. You had 24 "bylines" in ham radio from 1977 to 1982 (even

though ham radio magazine was in operation a lot longer than that).
Most of them were in the 1977-79 time frame (20 bylines). Not one
"build this radio!" article - lots of commentary, some theory, lots of
basic stuff on digital logic theory.

Last mention was over 22 years ago...

You talk about "independent thought". Designing and building a ham
station with only one's available personal resources requires a lot of
independent thought - and action. It also explodes the myth of
amateurs as simple consumers of manufactured products.

> Tsk. I lost interest in DXing in "radio sports" and the wallpaper
> collection of QSLs after working at station ADA long ago.

To each his own. Why do you denigrate what others find as fun? What is
wrong with live and let live?

> Became a professional in the radio-electronics industry, got regular
> money for not only designing, but building and testing, following
> through in the field, etc., etc., on many projects.

Completely different game. You sound like someone saying the Tour de
France is no big deal because you did the same route in a car in less
time. Or that a marathon is no big deal because you can do 26.22 miles
in less than half the time on a motorcycle.

Point is, for your own personal use, you just go out and buy a radio.
Yet you put down the salesfolk of 20+ years ago for not knowing some
arcane bit of info about the innards of the set.

Does it work any better because you know it has a 3 loop PLL?

> Do you find that without honor?

Nope.

> Without any worth?

Nope. You got paid, I presume?
>
> Why do you?
>
Why do you presuppose my answer?

And why do you make fun of others' work and accomplishments, yet
expect honor for your own?

"Do as Len says, not as Len does".

> >The main point is simple: Hams did not need synthesizers to stay in their
> >bands and subbands. Nor do they need 1 Hz or even 10 Hz accuracy on HF.
>
> In Jimmie's world, yes. :-)

Why is such accuracy needed by hams, Len?

> It must be right across the border from nursieworld. :-)
>

Actually that would have to be metrology (the science of measurement) since
temperature is not limited to weather.

Looks like we are slowly heading for a one class system and at the highest class at that as the greatest increase was in the number of Extras. On a percent growth basis, it's even more noticeable. The Extra class grew 34% in that time period.

Good point. :-)

Having been IN an emergency situation when ALL the electrical
power to 10 million were cut off, the existing infrastructure got
busy with repairs and rescue anyway...using VHF-UHF which
aren't supposed to be affected by the present-day BPL.

Sunnuvagun!

Tsk. Well, if you don't know how to use them, toss 'em.

You are PCTA extra royalty. Save the TUBES, recycle 'em into
world-beating contest-quality radios to win all those accolades!

>That leaves Sweetums and his half-vast "experience" out. Long-haul
>military HF comms are channelized and if a station is weak they just
>twist the Variac clockwise. 40kW with rhombics just to push RTTY from
>Tokyo to the west coast . . SPARE me . . !

You "know" all about military communications? Of course you do.
You were of the royalty that was never IN.

You've never worn an AN/PRC-104 HF manpack raddio, have you?
Big, powerful 20 W out on HF, operational with U.S. land forces
now. Same RF power out as the SGC 2020 being made in Belleview,
WA, by the company started by Don Stoner and Pierre Goral (both
SK, sadly, long-time hams).

The full manual for the 2020 is on the SGC website in case you
wanted to find out what is done TODAY. I could tell you were to

get the four full government manuals for the PRC-104 free but you
will only tell me "where to go." :-)

The "4 KW" and (later) "40 KW" pushing from Tokyo to San Fran or
anywhere else in ACAN was for SIDEBAND. The 12 KHz first
variety of SSB carrying four voice-bandwidth circuits. If you wanted
24/7 communications on HF back a half century ago, you needed
power and antennas. You spit on that fact, relegating such "menial"
tasks to "drudges" while you brag about "eating at the captain's
table."

>It's no big deal at all. As far as the "math" goes any kid who has a

>Ohm's Law. All of it is readily available out on the Web and it can
>all be done with a pencil and a calculator.

That's why Phil Smith came up with the Smith Chart back before
WW2. :-)

Not for designing antennas...for easing the work required by
Bell Telephone on long-distance transmission lines. Work that
required slide-rules and mechanical desk calculators (sometimes)
due to pocket calculators not being invented yet. :-)

>For my own part I've gotten into semi-automating the whole process in

>rountine in Autocad to come up with the cross-sectional properties
>then diddle the rest in Excel or Mathcad or a slick little $50
>shareware program called "DTbeam" which is a finite elememt analysis
>beam analyzer. The M.E.'s version of a Java-based Smith Chart solver.
>Sort of.

Tsk. You should use Roy Lewallen's EZNEC. Roy is a long-time
ham. EZNEC is advertised in QST.

USN Postgraduate School folks came up with the Numerical
Electromagnetic Code (NEC) which is all free to anyone (no
copyright). Too bad the USN types at the "captain's table"
didn't mention that to you...

"Vaporware" is best suited for newsgroup commentary by self-
styled PCTA radio police describing their "reasons" for retention
of the morse code test. :-)

>Who do you have more respect for, Dave:

Any PCTA who worships at the Church of St. Hiram.

>The person who talks endlessly about "state of the art", "better modes and
>modulations", "the future of amateur radio", "progress", etc., etc., yet who
>isn't on the ham bands at all?

Tsk. Keep the faith, Jimmie, make that Living Museum of Archaic
Radiotelegraphy continue...hold everyone back in the tube era
with all those "recycled" parts.

Keep talking snarly at all those non-ham people who have actually
had an entire career in radio-electronics involved in the contstantly-
changing state of the electronics and radio arts...and succeeded.

Work that key and collect those points and QSLs, remake tube
bases into plug-in coil forms, memorize all those schematics to
be the Ninth Wonder of the Radio world to anyone visiting your
shack. Force everyone to learn telegraphy to play in your ham
sandbox on HF.

>same band.

Where was all that talk about "phase noise" over a decade ago?

Hint: Cellular telephony had not the impact on electronics design
a decade and a half ago. "Phase noise" wasn't talked about much
back then. Some MUST have their buzzwords to sound "grown-up"
in hum raddio... :-)

There were contests a decade ago and farther back. Those that
don't have much to communicate can always have "contests" to
prove they are "somebody" through point scores. :-)

Especially good point scores through the efforts of "reducing
phase noise." :-)

>Not everyone likes sports, either. Particularly when the roads are clogged
with
>people going to and from the stadiums, TV programs are preempted for sports
>coverage, etc.

So...all the citizenry must learn and test for morse code in order to
"enjoy sports?" :-)

My reply makes about as much sense as Jimmie's...:-)

>Were the recent Olympics all about "contests for the simple reason that they
>are contests, organized by contestant-wannabes so that they can Win and show
>off that they are "better" than the non-contestants"?
>
>Perhaps we should inform the IOC.

Let the IOC work out their present problems.

NOBODY has yet to petition the IOC for "radiosport." :-)

>Len can enter any amateur radio contest he wants to.

Why should I?

Are your "roads so clogged with traffic" that you need to engage in
"radiosport" to enjoy yourself? :-)

>All that's needed is for
>him to obtain a valid amateur radio license, and an amateur radio station.

Why are you so focussed on all MUST have a ham license to
discuss anything in here? Are you finally starting to see that
your vapid arguments for the code test retention are that weak?

>His choice of home location may be more suited to listening to cbers on the
>nearby freeway than to working the rest of the USA, however.

Tsk. Bringing out the old bigoted remarks about CB, ey? :-)

More tsk. My choice of residence location is NOT primarily
motivated by any slavering desire to erect a radio station of
any kind. Residences are HOMES, a place of living.

I've lived ON a huge radio station long ago, one much bigger than
is possible in any residential area. Not my idea of living for the

rest of my life...but important back then. If you want to live ON
or IN a radio station, feel free to apply for a broadcasting license
and make sure the local ordinances allow living on business
premises.

For a small part of my life the radio station complex was built
ON an old airfield. Not even the old Press Wireless station
in Palos Verdes, CA, (the one bought by a ham) was that large.

>>> So...you think vacuum tubes will be with you always? :-)
>>
>>If he doesn't have enough, I'll give 'em to him. If I die first, I'll
>>will them to him.
>
>Thank you, Dave!
>
>In fact, I've been reducing my tube and parts stock because I have far more
>than enough. It would be wonderful if I could live long enough to wear them
>all out!

So...what marvelous improvements in the state of the art have you
conjured up with all those vacuum tubes?

I've heard that hams are supposed to keep up with the state of the
radio art...that was in the Amateur's Code way back (before the FCC
existed) and stuffed in to the 97.1 definitions by the FCC.

>The fact remains, however, that a lot of solidstate electronic devices
>(including ham gear) were made with custom parts which can be difficult or
>impossible to find, or even identify.

Tsk, tsk, tsk. Excuses, excuses. :-)

I can look in one of several distributor and retailer catalogs and get
tens of thousands of solid-state parts which can be bought for
very low cost. Look in Digi-Key's paper or on-line catalog...almost
overwhelming that quantity...and quality.

Problem is, you will NOT find many of the "traditional ham parts"
that were once on the market back in the 40s. You CAN get some
old style parts in niche resellers such as Ocean State Electronics
(specializing in sales to hobbyists...not all of whom are hams).

>End result is "can't fix it because the
>parts cannot be had". It is probably easier to restore a 40 year old R-390A
>or 75S3 than a 20 year old R-70, if certain parts are needed.

BWAHAHAHAHAHAHHAHAHAHA!!!!

Riiiiight. Try to find a replacement for an R-390 power transformer...
or anything inside that PTO...even in 1980... :-)

The designer-manufacturers of electronics and radios "didn't" use
house numbers back in the 40s and 50s? It only happened when

solid-state era arrived? Tsk. Untrue.

TUBES need to be replaced because their operating life is short
compared to solid-state devices. That's why they were mounted in
sockets...so consumers (like hams) could remove them and "test
them in tube testers" such as what used to be in supermarkets
and drug stores. :-)

>Of course this is driven by a whole bunch of factors, ranging from increased
>reliability (if it doersn't break you don't need to be able to fix it) to
>length of production (the R-390A was manufactured for at least 30 years by a
>number of companies, including a few made under a contract awarded to Helena
>Rubenstein), to the fact that newer electronics are often not designed to be
>fixable, and are meant for a limited design life - if it fails, you just get
>a new one.

Oh ho! Sound the Alarum, start the Hue and Cry, FACTUAL ERROR!

Helena Rubenstein (or whatever the cosmetic company was) NEVER
MADE any R-390s. According to legendary story, they thought to
expand their business horizon by going for a contract bid to the DoD
on building those (DoD owned all the plans and data, would supply
them). Once the executives saw what was involved and that they
were WAY out of their league trying to make those, they went out
and bought someone else's R-390s and stuck on their nameplate
identification in order to avoid contract fraud and other problems.
The cosmetics company didn't make any profit on that venture and
never tried it again.

>Of course there are exceptions, like Ten Tec's policy of board-swapping. And
>there are specialists who can bring almost anything electronic back to life.

You should open up a business with a name like "Lazarus Inc." or
whatever. Do it with tubes. You can memorize all the plans and
schematics, cut the paperwork enormously.

>One of the design parameters of all my homebrew projects is that the result
>must be serviceable with parts and tools on hand. Nothing is built with "one
>of a kind" or rare parts, and nothing is pushed hard. Result is that I've had
>very few problems.

Hnarf! :-)

>>He can have enough to see him through his lifetime.
>>Does that suit your definition of "always"?
>
>I hope to outlive my supply...

Remember Jim Fixx... :-)

>>> Of course...you can "recycle" them...somewhat after their useful
>>> life...and "impress all who visit your shack."
>
>??

>
>A recycled component is still in its useful life, because I'm getting use out
>of it. Nothing in the Type 7 is "after its useful life".

Wonderful. But...Kluge City stil looks the same with "remodeling"
from other kluge parts.

>And when a tube finally fails, its base is often useful as a connector or
>plug-in coil form. Other defective components sometimes yield useful parts,
>too. Nothing goes to waste at N2EY.

Keep a hammer and anvil handy...flatten all those tin and aluminum
cans to use for chassis.

"Plug-in coil forms?" You have coils that burn out?

>>Don't you ever try to impress folks who visit your shack, Len?
>
>What impresses folks most is that I can recall schematics and other info from
>memory.

Wow! Like "so few" are able to do that? :-)

>>You know, take 'em in to view the R-70?

When it was new, the only one "taken in to see the R-70" was Al
Walston, W6MJN, when he was over to my house. We talked
over the design, features, etc., looked at the rather large schematic
supplied with the Manual, usual stuff. Wasn't to "show off."

>He bought it for CASH, Dave ;-) Somehow, that is supposed to be significant.

I recycled some money. :-)

>I find it interesting, though, that Len does not tell us of *his* homebrew
>radio projects.

HAR! Not in THIS newsgroup full of PCTA extras! :-)

>Frankly, I would have thought that he designed and built his
>own receivers, rather than buying a ready-built imported unit like the R70.

Last vacuum tube receiver I DESIGNED and built was in 1964-1965.

HF. Wasn't for listening to on-off keyed radiotelegraphy! [horrors!]

Terrible thing! NOT A LICENSED AMATEUR DESIGNING AND
BUILDING AN HF RADIO! Call out the radio police!

It didn't use any "recycled parts."

>A person doesn't need any knowledge or skill in radio-electronics to buy or
use
>one of those.

Riiiiight...why "everyone knows all about" RIT and AGC time-constants
and stuff like that there...just ask any civilian customer at Best Buy
or Circuit City...they all KNOW everything about HF radio! :-)

"Common knowledge" in consumer electronics, right? :-)

>And while we're on the subject, how about these specs for a new receiver:
>
>MDS -135dBm
>AM Sensitivity -110dBm
>Blocking Dynamic Range 5Khz 119dB, 20Khz 119dB
>3rd Order dynamic Range 5Khz 87.7dB, 20Khz 95dB
>Image rejection >152dB
>IF Rejection 106dB
>
>No, it's not the Southgate Type 7.

"Sounds just like his 'high school friend'..." :-)

Wow! A true thing by a morseperson! :-)

I've been testing electronics IN a -55 C environment. Involved in
metrology. Was cold. I didn't stay in the walk-in chamber for
any longer than necessary. :-)

Wasn't degreed or credentialed in metrology at the time. Nobody else involved in that testing was degreed or credentialed in metrology. NIST doesn't demand that, either!.

Sunnuvagun!

But...to be super-legal on ham HF one MUST be tested for morsemanship. Ham radios won't work without that credential?

LenAnderson@ieee.org

Oh, my, aren't you royals Talking Down to the proletariat!

Difficult to discuss the subject of "US Licensing Restructuring"
in the presence of such nobility. :-)

>The clarifying phrase is:
>
>"Even with an ideal receiver front end"
>
>meaning that even if IMD and IP3 aren't causing problems, phase noise
>*alone* can cause the apparent noise floor to rise if there are strong
>adjacent-channel signals.
>
>Note how, in lab tests, there is sometimes the annotation "noise
>limited" when certain tests are made. What do you think that term
>means?

Heh heh heh...I'm sure you will eventually get around to showing
that...and that on-off keying telegraphy MUST be tested for in
order to operate in ham HF bands...with or without "recycled
parts" raddios.

So...was all this "phase noise" invisible way back in the
1990 time? It didn't exist? It only came up when a frequency
synthesizer was incorporated? :-)

>R70s were made 1982-84 (approximately), so the design is at least 23
>years old (1981). You frequenctly denigrate others as "behind the
>times", yet the R70 is the newest/most modern piece of HF radio
>equipment you mention owning. Just another example of "do as Len says,
>not as Len does".

That little Icom R-70 still works fine, as advertised. I've got one.
You don't. :-)

The only thing I "recycled" was some paper to get one in working
order. :-)

"Phase noise" wasn't a big buzzword then. It has a three-loop
PLL in it plus a microcontroller. Sensitivity is still good and
comparable with any contemporary HF receiver.

>Have you ever used the receiver he mentions?

R-390? Yes. R-391 (which he didn't mention)? Yes. R-388?
Yes. A Collins 74 or 75 something or other owned by Ed Dodds,
(W6AFU?) long ago. A KWM2? Yes.

I have an Icom R-70. You don't. :-)

>No, completely relevant. One important measure of amateur equipment
>quality is how it performs in actual on-air operation.

Duhhhhh. :-)

>Who decides what is "real sport"? You're not the IOC. Or TAC ;-)

I thought YOU were one of the Ruling Elite on What Is What
in amateur radio? You and all the elite PCTA extras...

>The term "road race" is not limited to motor vehicles. It's
>understandable that you don't like sports.

Tsk. Your "sport" here is trying to establish a world-record in
sarcastic conclusion-jumping!

I like and used to enjoy (as a participant) certain sports such as
international football (you may know it as "soccer").

I've yet to get close to the concept of sitting around a shack
making as many contacts as possible in a given time as any
"sport." Neither is that activity "pioneering the ariwaves" nor
any sort of "training for emergencies" to reasonable-thinking
human beans.

Like chess or checkers or board games, radio contesting is
a GAME.

It is FAR from an ATHLETIC sport.

>Not the same as being there. It seems you enjoy only second-hand
>experiences.

Tsk. You've never been in the military, certainly not in military
radio communications, yet you consistently put down what I
experienced in military HF radio communications. You "know"
about it?

>The above story is true. The ham involved (actually an ex-ham; he no
>longer shows up in the database) behaved exactly as described. He
>probably went on to a career in electronics in some capacity or other.
>And as I said, most of his ideas were pretty good - he just never
>carried them to completion or even to partial implementation. At least
>he held a ham license for a while - you haven't even done that.

Heh heh heh...back to the "Sermon on the Antenna Mount" thing.

You still claim over-riding expertise in radio design from what?
Recycling parts in your shack? Building Elecraft kits? A double
degree way back when? RADIO INDUSTRY experience?

Yahhhh...to be "knowledgeable in radio" requires a radio amateur
license?!?!?

>You *do* sound just like him, Len. Lots of words and lots of put-downs
>and lots of theory. But in terms of actual radios built on your own
>time, with your own resources, from your own design....nada. Zip.
>Zilch. Zero. Nothing. Not that anyone here knows about in all your
>years and petabytes of posting.

If I had extra copies, I could, with a year or so off to do it, digitize
those things and put them on a website that allowed at least 100
MB user space. That includes corporate documents (public)
along with photographs. Not worth it, since the typical PCTA
extra "commentary" (to use a word very loosely) would be

totally derogatory. My little text and photo memorabilia on the
ADA assignment takes 6 MB in PDF.

YOU have REJECTED simple things like a digitized license
repro in the past. You would be expected to reject anything I
present...as "credentials" or whatever real proof there is...and
there is a lot of it.

>I even looked through the online database of ham radio magazine
>articles. You had 24 "bylines" in ham radio from 1977 to 1982 (even
>though ham radio magazine was in operation a lot longer than that).
>Most of them were in the 1977-79 time frame (20 bylines). Not one
>"build this radio!" article - lots of commentary, some theory, lots of
>basic stuff on digital logic theory.
>
>Last mention was over 22 years ago...

Yes. I did it then. Even got paid for it!

I have an Icom R-70. You don't. :-)

>You talk about "independent thought". Designing and building a ham
>station with only one's available personal resources requires a lot of
>independent thought - and action. It also explodes the myth of
>amateurs as simple consumers of manufactured products.

Right. All hams do the "recycle" thing. :-)

>> Tsk. I lost interest in DXing in "radio sports" and the wallpaper
>> collection of QSLs after working at station ADA long ago.
>
>To each his own. Why do you denigrate what others find as fun? What is
>wrong with live and let live?

A federal REGULATION requiring morse code testing in order
to get an AMATEUR license to operate on HF is NOT
"live and let live."

>> Became a professional in the radio-electronics industry, got regular
>> money for not only designing, but building and testing, following
>> through in the field, etc., etc., on many projects.
>
>Completely different game. You sound like someone saying the Tour de
>France is no big deal because you did the same route in a car in less
>time. Or that a marathon is no big deal because you can do 26.22 miles
>in less than half the time on a motorcycle.

Lower your lance, Armstrong. This is NOT about athletic sports
or motorcycling.

>Point is, for your own personal use, you just go out and buy a radio.
>Yet you put down the salesfolk of 20+ years ago for not knowing some
>arcane bit of info about the innards of the set.

"Arcane?" :-)

I put down ANY salesfolk that want to give me a snowjob about a product they are selling or - in this case - just NOT KNOWING ENOUGH - about an expensive product.

>Does it work any better because you know it has a 3 loop PLL?

No. It works better BECAUSE it has that 3-loop PLL.

I could explain the reasons it does so, but you will dismiss it as "arcane" and Kellie will think it is all "bafflegab" (because he is not up to speed on control theory). Davie will snarl and start babbling about his mini-radio-museum and "you should SEE this Orion!" :-)

Oh, yeah, the gunnery nurse will probably jump in and talk about "healthcare credentials" and call everyone "Putz."

>Well, now we know where *your* mind is at, Len...

You aren't even close. But, if it pleases you to "recycle" some imagination and fantasies, you will NOT do "nothing" as you signed off.

LenAnderson@ieee.org

44. Amateur Radio Newsline™ Report 1416 October 1, 2004

Newsgroup: rec.radio.amateur.policy
Date: 2004-10-01 20:41:43 UTC
From: radionews@aol.com
Message-ID: <20041001164143.16740.00001397@mb-m11.aol.com>

Amateur Radio Newsline™ Report 1416 October 1, 2004

Amateur Radio Newsline report number 1416 with a release date of Friday, October 1, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio is ready as Hurricane Jeanne hit Florida. Find out the details on Amateur Radio Newsline report number 1416 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAM RADIO MEETS HURRICANE JEANNE

Making landfall near Stuart, Florida, early on Sunday, September 26th, Hurricane Jeanne blew across that state with 120 mph wind and drenching rain. News reports say that the storm hurled debris into the air, tore rooftops off buildings and sent monster waves onto the shoreline. And as Jeanne's wrath played out on television screens across the nation, it was the calm voices of ham radio operators of the Voice Over I-P Hurricane Watch Net that signaled it was about to arrive:

--

"At 11 PM, the center of Hurricane Jeanne was located near Latitude 27.2 North and Longitude 80 West, or about 15 miles East of Stuart Florida. Jeanne is moving slightly North of West near 13 Miles Per Hour."

--

Hams also relayed a stark warning from the National Hurricane Center. One that said -- stay out of Jeanne's way:

--

"...with maximum sustained winds of 115 MPH with higher gusts, Hurricane Jeanne is a is a dangerous Catagory 3 hurricane on the Saffer-Simpson Hurricane Scale."

--
Over two million residents had been urged to evacuate. State officials said more than 42,500 stayed at shelters. Many of these were staffed by ham radio operators associated with A-R-E-S and RACES groups.

As Jeanne made her way across Florida, many residents were without telephone service and more than a million people lost power. But ham radio operators using all kinds of emergency power sources were on the air. In fact they were the ones who relayed word of some of the major outages:

--

"KA4EPS in Deerfield Beach passing on some information you might be interested in. Have some numbers passed along by the local utility company. Dade County has 2900 without power. Broward County 71,000 and Palm Beach County 487,000 without power."

"QSL Lou, Thanks."

--

The Category 3 storm became the fourth hurricane to pummel Florida in a single season. The three other hurricanes - Charley, Frances and Ivan - have all hit within the last six weeks. And hams like Paul Goodell, KG4GOQ, in the town of Lake Worth might not have sounded that great through all of the radio links, but he did get the word out:

--

"Estimated winds in excess of 100 miles per hour. Trees bent and laying over."

--

Then for a while there was a period of calm. This as the eye of the storm came ashore. It gave first responders a chance to assess the damage done so far:

--

"KG4YQK at the Port St. Lucie E-O-C W4SLC. We are in the eye of the storm presently. We had sustained winds of well over 110 miles an hour. We received substantial damage here locally. Trees down. Powerlines down. Flooding as well."

hurricanes. As it did, even public service communications took a hit:
--

"Net control is listening. Go ahead Paul:

"I just heard second han that the communications tower for Riviera Beach has collapsed. Probably not something for the national hurricane Center, but just as a note to anyone else out there listening to hear how bad these winds are going."

--

By late morning, Jeanne had weakened to a Category 1 storm with 75-mph top sustained winds, but its 400-mile diameter covered most of

the central part of the state including Tampa and Orlando. As Jeanne proceeded to fall apart while heading North-East over Georgia and the Carolina's she dumped torrential rain and spawned close to a dozen twisters. More on the aftermath of Hurricane Jean in future Amateur Radio Newsline reports. (ARNewsline(tm) with audio from the VoIP Hurricane Watch Net)

**

THE BPL FIGHT: PERTH INTERFERENCE NOT BPL RELATED

A widespread interference problem in Perth, Australia, that sounds like B-P-L has to be something else. This, after the city's Power Authority tells Dennis Muldownie, VK6KAD, that it is not using Broadband Over Powerline technology to monitor its electrical network.

There is now some supposition that noise that wiping out free to air TV channels 2, 7, 9 and 10 may be coming from some home network gear which uses the power mains to connect the various pieces in a home Local Area Network. But the noise is so widespread that it has to be more than one installation causing the problem. This, by radiating back out over the local Perth power grid. (WIA News)

**

THE BPL FIGHT: FCC TO RELEASE R&O ON BPL ROLLOUT

Meanwhile, back at home the ARRL says that an initial Report and Order on the rollout of B-P-L could be on its way out of the FCC this month. Amateur Radio Newsline's Mark Abramowicz, NT3V, has been following the story and has more:

--

The ARRL says that an initial Report and Order on the rollout of B-P-L could be on its way out of the FCC this month. Amateur Radio Newsline's Mark Abramowicz, NT3V has been following the story and has more…

As predicted almost on cue, the Federal Communications Commission appears ready to render its decision on Broadband Over Powerline Internet access.

And despite thousands of comments on the subject, many of them raising concerns about the interference potential of the technology, the ARRL says it has learned the panel is ready to act.

As one high-ranking ARRL official has told Amateur Radio Newsline, it's not a question of whether there will be BPL. There will. The question is in what form will it be rolled out and how effective will the safeguards be to protect other services.

In its recent bulletin, the ARRL advised it had learned the FCC's Office of Engineering and Technology would have its draft order on BPL ready for the commission's Oct. 14 meeting.

The ARRL has mounted a vigorous information campaign to raise awareness about the threat BPL poses. And, it has also tried to lobby at various levels to change some minds about the benefits the BPL industry says the technology will bring.

But it appears, based on the ARRL's BPL bulletin, that the organization is pessimistic about what will be coming out of the FCC's technology arm.

In fact, the ARRL's Chief Executive Officer David Sumner, K1ZZ, in a letter sent as a follow-up to a recent meeting with FCC commissioner Jonathan Adelstein sums up what the League is expecting.

"…the ARRL has no confidence that the draft report and order will be based on sound engineering and believes the rush to adoption is unwarranted and premature. " That excerpt of Sumner's letter from the ARRL's Bulletin.

In interviews with Amateur Radio Newsline, ARRL President Jim Haynie W5JBP says there was little doubt in his mind the issue would be decided BEFORE the presidential election. Haynie contends the issue is being driven by business interests who have the ear of the president and his technology advisors.

Haynie has told Amateur Radio Newsline of his concerns about the FCC's apparent lack of interest in following up on the many pending BPL complaints - filed as a result of system tests. He has told us he fears when the commission finally acts, it may bow to BPL interests that are seeking to weaken the impact of any interference complaints.

So the question many amateurs may be asking themselves as we await the FCC's order is where will this leave me? Is it time to put my radios up on Ebay and turn my focus to my computer and EchoLink?

The answer: Not so fast!

The National Telecommunications and Information Administration still has a card or two to play. Its technical people have raised interference issues and are continuing studies and plan to release more results in the next several months.

Will the FCC wait for the NTIA? Will the FCC table BPL? Not likely to both. Is there room for an appeal of any FCC BPL decision? If so, it would likely wind up tied up in the federal courts.

With the planned rollout out of Wireless Internet access here in Philadelphia and other cities across the nation, do the economics dictate a utility recovering its investment in BPL technology at a pace investors are willing to wait?

The questions are many and the debate is likely to continue for the next several days.

From our perspective, it seems unlikely the FCC decision - if it goes against amateur radio interests - will stand without a challenge. Too much time and talent has been invested in preparing the data showing what BPL can do to the amateur frequencies and our ability to operate.

We'll stay on top of it for you. And, once the FCC order arrives, we'll have the first reaction and what it will mean to you.

Stay tuned!

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

More on the B-P-L issue in future Amateur Radio Newsline reports. (ARNewsline(tm, ARRL)

(5 sec pause here)

**

THE BPL FIGHT: BPL COMES TO CENTRAL VIRGINIA

Still with news on the B-P-L front, Charles Rivelle, K3FT, has some news about one electric company's future. He says over QRZ.com that the Central Virginia Electric Cooperative has completed testing of its B-P-L system in Nelson County and the company is now serving customers on 40 miles of operational lines.

The K3FT posting provides a link to a two-page advertisement that has been sent to thousands of customers throughout central Virginia. The ad alerts them to look forward to B-P-L service in the area noting that line crews are now installing the equipment needed to deliver Broadband over Powerline services. Up to 4000 homes and businesses will be eligible to participate in the first phase of this program. Central Virginia Electric Cooperative says its "always on" 256 kilobaud per second broadband connection is priced at a very competitive $29.95 a month.

Check this web site for details: http://www.forcvec.com/bplcoop/ (K3FT via QRZ.COM)

**

THE INTERNET: US FALLING BEHIND IN BROADBAND ROLLOUT

Meantime, the FCC insists that the United States is making progress in rolling out high-speed Internet service. This, despite facts showing that the nation is falling further behind other countries.

A new Federal Communications Commission report found that U.S. high-speed Internet lines had tripled to 28.2 million by the end of 2003 from June 2001, but the country at best was 10th place in international rankings down from fourth, lagging nations like Canada and South Korea.

FCC Commissioner Michael Copps criticized his own agency over the disappointing news. He says that the agency had failed to establish a coherent policy for broadband, sacrificing the nation's rank. Copps also noted that service was as cheap as $10 a month in Japan for 8 megabits a second versus $30-$50 for 1-3 megabits in the United States. (Published news reports)

**

CHANGING OF THE GUARD: STAN BURGHARDT, W0IT - S.K.

The changing of the guard in ham radio continues with word of the passing of two well known radio amateurs. The ARRL Letter reports that Stan Burghardt, W0IT of Watertown, South Dakota, died on August 22nd at age 93. Burghardt was the founder of Burghardt Radio Supply Inc. which is now known as the Burghardt Amateur Center. He was first licensed in 1931 as W9BJV and became W0BJV in 1946. Burghardt remained active on the air -- especially on 6 meters -- until his death. (ARRL)

**

CHANGING OF THE GUARD: ROGER BAKER, G4IDE - S.K.

And ham radio software writer Roger Barker, G4IDE, has passed away. Baker died on September 9th following a long bout with cancer. Baker was the author of UI View, PSK31SRV and a host of other digital mode software and was recently named as the first recipient of the 'Lifetime Achievement Award' by the Tucson Amateur Packet Radio for his services to digital communications.

Baker's packet radio program Winpack is currently in use by tens of thousands of radio amateurs around the world, while his UI View program is now considered to be the benchmark by which all other APRS Raster Mapping software is compared. (KB7TBT, G3ZHI, others)

**

ENFORCEMENT: KEEP OFF 10 METERS

The FCC has written to five trucking and transport companies warning them to keep their drivers from operating radio gear on 10 meters.

The letters went to Con Way CWX Trucking of Long Beach, California; Dowell Express, Inc. of Lavonia, Georgia; K & K Cartage, Inc. in Sunbury, Pennsylvania; Teeberry Trucking LLC whose home base is Charlotte, North Carolina and United Van Lines of Fenton, Missouri. Divers for these companies were heard operating radio gear without licenses on 28.085, 28.115 and 28.215 MHz

Each letter carries a stern warning that continued operation could lead to confiscation of the radio gear as well as a prison term and a hefty fine and for the unlicensed radio operator. These monetary forfeitures normally range from $7,500 to $10,000. (FCC)

**

ENFORCEMENT: A DEAL A PIRATE COULD'T REFUSE

And there appears to be two ways to get someone to stop rebroacasting your radio station. You can complain to the FCC or you can take another and apparently much quicker route that one station has. Norm Seeley, KI7UP, explains the unique and effective approach:

--

An unlicensed broadcaster is off the air in San Diegio, California. This, after a licensed broadcaster in San Clemente kind of took matters into its own hands and made the pirate a deal he could not refuse. Legally speaking that is.

When KWVE was recently advised that its signal was being rebroadcast by apparently unauthorized translator station in Lakeside, California, the station dcided to act. Rather than wait for the FCC to investigate and politely ask the pirate to cease and desist, representatives of KWVE paid the party a visit. The station also threatened in writing to seek legal injunction if the unauthorized rebroadcasts continued.

And you can call this approach as being very effective. The translator fell silent in short order and has not been heard since.

--

While this system is seemingly a lot faster it also means having to hire a lawyer and pay his fee. (CGC)

**

RESCUE RADIO: FCC PARTICIPATES IN COUNCIL ON EMERGENCY PREPAREDNESS AND INDIVIDUALS WITH DISABILITIES

The FCC has participated in the first meeting of the Interagency Coordinating Council on Emergency Preparedness and Individuals with Disabilities. This, at the Department of Homeland Security in Washington D.C..

The FCC was represented by K. Dane Snowden, the chief of the FCC's Consumer & Governmental Affairs Bureau. At the meeting, Snowden

announced that the FCC has issued policies and will launch outreach efforts. This, to ensure that facilities that provide telecommunications relay services for persons with hearing and speech disabilities are designated priority for restoration of service in cases of emergency. Snowden also described a rulemaking by the FCC to improve the emergency alert system to make it more accessible for people with disabilities.

The Interagency Coordinating Council on Emergency Preparedness and Individuals with Disabilities was established by Executive Order on July 22nd. Its purpose is to address the safety and security needs of people with disabilities. (FCC)

**

HAM RADIO ON THE INTERNET: BIG DATABASE UPGRADE AT QRZ.COM

The QRZ.com website call sign system is running a lot faster these. This as the result of a major an upgrade to a new and more powerful server.

The new database engine is a Sun E280R. This is a 64-bit industrial strength machine with dual 900 MHz processors, 4 GB of RAM, and a pair of 36 gigabyte 10,000 R-P-M Fibre channel disk drives.

Fred Lloyd who runs QRZ.com says that these new disks are really impressive. Fred says that he has clocked them at speeds of up to 64 megabytes per second. That equates to an entire C D ROM's worth of data being moved internally in only 10 seconds.

Lloyd adds that this new server only handles the call sign database. The main QRZ.com web server remains a 450 MHz Sun E420R with 2 gigabytes of RAM. (QRZ.com)

**

THE SOCIAL SCENE: THE WSWSS VHF/UHF CONFERENCE IN CA IN OCT

Turning to the ham radio social scene, a reminder that the Western States Weak Signal Society's annual VHF UHF Conference takes place on Saturday, October 9th. The venue is the M2 Antenna Systems facility in Fresno, California and features prizes, technical programs and a great BBQ Dinner. More info at www dot wswss dot org. (WSWSS)

**

THE SOCIAL SCENE: OPRC HAMFEST IN AZ. IN OCTOBER

Just to the East in Arizona the Old Pueblo Radio Club will hold its hamfest on October 16th at the Kinko Sports Complex in Tucson. For more information on this one please contact John Kalmes, KC7LIB, by e-mail to kc7lib@aol.com (SW Communicator)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

ARNEWSLINE(TM) SUPPORT FUND REPORT WITH N6TCQ

Audio report only: Hear it at www.arnewsline.org

**

RADIO HERITAGE: NAVY TO CLOSE SUB COMM CENTERS

The United States Navy says that it will dismantle two extremely low frequency radio transmission centers used to communicate with submerged submarines. The Navy says that the 400-million submarine-communications system, which has been in use since 1989, is outdated and no longer needed.

Two transmitter sites are involved. One is in northern Wisconsin and the other in Michigan. They will go out of service on September 30th but could take up to three years to disassemble and close down permanently.

Each system consists of a transmitter and an antenna strung on 600 12 meter high poles. The navy has used these extremely low frequency transmitters to maintain secure communications with submarines at sea but now will use 12 smaller transmitters, sited worldwide. (Pulished reports)

**

HAM RADIO IN SPACE: ISS REPEATER ON AGAIN

The FM Repeater and BBS on board the International Space Station was again open for general ham radio contacts on September 27th and 28th. During that time voice contacts were available on by transmitting up to the I-S-S on 145.920 MHz with a 67 Hz CTCSS tone while listening for replies on 435.300 MHz. The Bulletin Board used an uplink of 145.860 F-M and a downlink at 435.150 MHz. This operation was followed by a PSK-31 Experimenters Wednesday Test on September 29th.

The system will be on periodically and ARISS will announce the dates and times in advance. Check with the I-S-S Fan Club web page at www.issfanclub.comto see what the latest status is.

Also, keep in mind that the radios on board the space station are not able to correct for Doppler as the frequencies are channelized. It

is up to the ground station to do the Doppler correction. For 2 meters, the Doppler shift is about +3kHz at the beginning and goes to about -3kHz at the end. For 70 cm, the Doppler is about +10kHz at the beginning and goes to about -10kHz at the end.

The 70cm Doppler is roughly 3 times the 2m Doppler. Many of the tracking programs have the ability to calculate the frequency shift. (ARISS)

**

HAM RADIO IN SPACE: MIKE FINCKE ON THE AIR

And as his time on board the I-S-S begins to wind down ham astronaut Mike Fincke, KE5AIT, has been on the air quite a bit. Not only to talk to school students in pre-scheduled contacts, but also to any ham who wants to chat a bit. One of those who had the opportunity to talk recently with the intrepid space traveler is Scott Avery, WA6LIE, in Salinas, California, who had had his recorder running:

--

Contact audio here. Hear it at www.arnewsline.org

--

Scott says that his QSO with KE5AIT space mobile took place at about O2:15 on September 28th. Needless to say that signals were 5 by 9 and full quieting both ways.

Fincke and Commander Gennady Padalka, RN3DT will be finishing their tour of duty on the ISS in the middle of October. They will be replaced by Expedition 10 Astronaut Leroy Chiao, KE5BRW, and Cosmonaut Salizhan Sharipov. WA6LIE's full contact with the I-S-S can be heard on line at www.qsl.net/wa6lie (WA6LIE)
**

DX

In D-X word that Crete will be coming on the air in October. This as SV9FBM and SV9FBZ become active as active as SY9Y in the CQ World Wide DX SSB Contest on the 30th and 31st as a Multi- Single entry. QSL to Stelios Aggelakis, P.O.Box 113, GR 72200 Ierapetra, Crete Island, Greece. (OPDX)

And EA1QF and EB1AA will be on the air from Cuba from October 12th to the 25th. The pair will be working on a "Radiosolidarity" project, but will also be operational on the H-F bands from several station locations as T42R. QSL to EA4URE at his callbook address. (GB2RS)

**

THAT FINAL ITEM: THE ARDF REPORT

What do Burrowing Owls and 80-meter transmitters have in common? They are both targets of hams who like to do radio direction finding. Newsline's Joe Moell K0OV tells us more:

--

There's lots happening in the world of radio direction finding this summer. More young Burrowing Owls are leaving their nests in western Florida, so hams in that state who aren't busy with hurricane communications are by their receivers, listening for the radio tag signals to see where these critters will go. If you can help, please join them -- I'll tell you how in a moment.

Also, a 21-member delegation of ARDF Team USA competitors, trainers, jurors, and family members went to the Czech Republic and the World Championships of radio foxhunting, September 7th through the 12th. These World ARDF Championships take place every two years. USA's 2004 team members were OMs and YLs ranging in age from 19 to 62. Among them was Jay Thompson W6JAY, Newsline's Young Ham of the Year for 2003 and recent winner of the ARRL Hiram Percy Maxim Award. Each competed once on 80 meters and once on two meters, looking for three, four or five transmitters, depending on age and gender category.

USA began attending the World Championships in 1998, but European and former Soviet countries have been holding ARDF events for over 30 years. So it's no surprise that they dominated in the final standings. Nine of these nations garnered all of the individual and team medals. The total medal count was led by Czech, Russia, and Ukraine with 34, 28 and 26 respectively.

USA, Australia, and Great Britain were among the 19 nations that won no medals. But we're getting better every year. Two Team USA members had top-ten individual finishes in their categories. Nadia Scharlau of Cary, NC took 6th place out of 22 on two meters. She might have won a medal on 80 meters, but the battery fell out of her receiver and she had to find the last fox transmitter with just the bearings that she already had on her map, losing about ten minutes. Bob Cooley KF6VSE, age 62, of Pleasanton, CA placed 9th out of 34 on his two-meter run.

All of our team members earned their spots by taking medals in the USA National Championships. This year's were in California in June, and a site is already being sought for the national championships in 2005, 2006 and beyond. As USA's ARDF Coordinator, I would like to hear from you if your club is interested in putting on the championships.

You can read all about the ARDF championships, Team USA, and volunteer wildlife tracking -- and find out how to get involved -- at the usual place, www.homingin.com. That's homingin, as one word, homingin.com.

From southern California, this is Joe Moell K-zero-Oscar-Victor, for Amateur Radio Newsline.

--

Again, that website Joe mentioned is www.homingin.com. And homingin is one word. (K0OV, ARNewsline(tm))

Not particularly Sweetums but there was this quirky little redhead I
ran into a number of years ago and spanking was one of her . . . Oops:
Off topic again. Knowing how important staying on topic is to you and
all that. Apologies.

Of course. He's just like my brother's big Labrador retriever, I toss bones down the yard for Gunther to gnaw on and I toss bones out around here for Sweetums to gnaw on. The only significant difference between the two being that Gunther doesn't know his way around a keyboard.

Groan, I doan believe it . . ! You're not only flat out dead wrong *again* but 180 degrees wrong. Fact is Sweetums that at FD sites non-licensed folk are *encouraged* to operate. At least you're amazingly consistent.

That's your interpetation of the rules and I consider it far too
literal James. By any normal standards the individual punching the
buttons, doing the tuning and doing the communicating or in any
combination is defined as the operator. Everywhere, not just in ham
radio. In the case of ham radio Part 97 requires that a licensed ham
has to be onsite, watching and listening if the operator does not have
a ham license.

> But all that is besides the point.

THAT I agree with!

If you consider the Tech and Tech Plus as one class, it sure seems that way,
Dee.

Of course Novice, Advanced and Tech Plus have to decrease, because no new ones
are being issued. Extra can only decrease by expiration/cancellation, of
course.

Note how little Advanced has decreased, (percentagewise) though.

>single-sided boards dammit! Which all homebrewers could do then. Dunno
>how you did yours but there were complete PCB "kits" available from
>Kass and Radio Shack when I did mine.

My method was very simple - and I did double-sided ones.

1) Lay out both sides on grid paper
2) Lightly center punch holes on both sides
3) Cover both sides with transparent packaging tape
4) Use Xacto knife to cut out non-copper parts of tape
5) Ferric chloride bath to etch
6) Wash, remove tape
7) Drill through holes

Some what crude looking but they all worked. To save layout time, I made each
counter decade on one board, then wired the decades together.
>
>They provided sheets of transfers with "donuts" for wire and component

>> signal and the rest is obvious.
>
>Not quite. I gotta chase down the links Dave supplied and keep
>digging.

It's all there. Main point is simply that the output of many synthesizers isn't nearly as clean as what comes out of xtal or self-controlled oscillators of good design. Which is why this wasn't a problem in, say, a Ten Tec Corsair 2.

>> That's just one source of phase noise.
>
>OK

Note also that most modern rigs synthesize *all* the LOs, so the effect is magnified.

Typical Ikensu box starts out by converting the input to about 70 MHz. This permits covering ~DC to 30 MHz without gaps. Also makes image rejection really good with just a lowpass filter on the input. Of course the LO tunes 40 to 70 MHz, but that's not a problem with a synthesizer.

Keeping the synthesizer *clean* is another matter.

Then the 70 MHz is converted down to the first filter frequency - typically 8.83 MHz. Requires another oscillator - typically synthesized because that way you can do things like PBT easily. Then BFOs, and such....all synthesized.

Just a different environment. Army of Occupation takes over JA in 1945, one of the first orders of business is good comms back to DC and Arlington. Pick out a good site, put up the poles, haul up the diamonds, fire away. All on the taxpayer's nickel. Well spent money but has little to do with the reality of self-funded avocational radio.

Now that is a little more complicated, Jim. While it would seem
apparent that Lenover21 would like us to treat Steve in a manner similar
to Brian or his own reactions to Steve, I don't think it is that simple.

If we did, than he would be deprived of the opportunity to respond to
us in criticism of our own reactions toward Steve's postings. Although
I am not 100 percent sure (though for statistical purposes am, within
accepted errors) I do not think he would enjoy that

> but Morse Code *use* by hams!

I never did understand that argument anyhow. SSB is what, nearly a
century old? FM? WAY too much hangup on how we modulate our signals.

Here's a question. Digital is more "up to date" than say SSB. Should
digital voice be mandated, and SSB phased out ASAP?

But wait! Unless we are willing to accept apparently unacceptable audio
quality, we have to use a signal that is wider than a SSB signal. And
the digital units that I have seen have a little quirk of having to
receive the beginning of a transmission in order to decode the signal.
So much for listening for a CQ. If you don't hear the beginning, you
don't hear anything!!!!!

But it's closer to the state of the art, it *must* be better. not

Or SSB or RTTY or anything else not "in the now".

I'm curious just why people would think that using a computer is "High
Tech" or why using a little walkie-talkie that only works for part of
the time is "High Tech". It's not high tech, its technology that is
reduced to practice.

Morse code is an old comm method. So what?

But, but, but... Len. I -need- her to be licensured or credentialed
in metrology whether there's such a thing or not.

I -must- have it.

I DEMAND IT!!!

If >>>SHE<<< doesn't produce licensure in metrology within 24 hours,
Dee will forever be known as a LIAR and a Bag Lady and a Horse Thief!

Because >>>I<<< say so!

;^)

> But...to be super-legal on ham HF one MUST be tested for
> morsemanship.

Only in the land of the free and the home of the brave.

> Ham radios won't work without that credential?

Nope - they refuse.

Physics is altogether different.

Haven't you learned that by now? You've been told often enough.

If you don't get that by now I'm going to have to start Dialing...

> LenAnderson@ieee.org

Strange brew. The things you learn in a ham newsgroup.

Any high school graduate who paid attention during the science
classes knows that -40F = -40C without having to calculate it.

Folks have flunked out of first-year engineering and science classes
for less than that.

I think you're nuts, that's all. Did I state a diagnosis or prescribe a treatment?

> Are you not aware that it's a felony to represent yourself as a physician
> or healthcare provider without the appropriate license?

Probably a felony for a nurse to represent herself as a "doctor of pathos" as well.

My, my. You seem to want it both ways. Just a few posts ago, they were
just opinions when I wrote that you presented something as fact. Now
they are opinions based on FACTUAL evidence of over a half century of
observation.

In that case, your facts and your opinions on synthesizer spurs and
phase noise are wrong.

> >>> If you don't like it, TS.

You didn't answer the question posed to you.

> >Note that Len simply attacks an opposing opinion without any facts to
> >substantiate his attack.
>
> WRONG. INCORRECT. My opinions are based on FACTUAL
> evidence of over a half century of observation.

My, my. You seem to want it both ways. Just a few posts ago, they were
just opinions when I wrote that you presented something as fact. Now
they are opinions based on FACTUAL evidence of over a half century of
observation.

In that case, your facts and your opinions on synthesizer spurs and
phase noise are wrong.

> Since when did you two Clingons become sole arbiter and judge of
> what is "fact?"

Your view then is that there is no correct or incorrect, no right or
wrong and that there is no invalid opinion?

Is this part of the civil discoarse lesson? Should I be taking notes?

> >>> >Repeatedly proven to be incorrect, in error, and without any basis in

Balderdash, Leonard. You have indeed been proven wrong by very real
facts, supplemented with several urls where those facts might be
verified.
You're beginning to look very, very silly.

His "point" was to impress us with how much he knew about the devices.
Whether he actually knew much or just presented material glommed from
the web is irrelevant. He needed to impress us. Nobody can know more
than Leonard H. Anderson. Certainly not mere radio amateurs.

Len isn't going out to see his pals at the local HRO store to buy QST on
CD-ROM. He certainly isn't going to go round up the actual magazines.

> >I'm sure it'll come as no surprise to Leonard that my funeral pyre will

> trips in a Citation to move them all.

Jack Fulmer, then W4HAV (now W4YF) was Vice President of Cincinnati Milacron lived near me in Fort Thomas, Kentucky early in '68. He had a complete run of QST but his late Uncle was also a ham and left Jack his magazine. Jack gave me the complete run of 1934-1958. That formed the core of my QST collection. Jack was the guy, who with Jean Shepherd started the short-lived first VW dealership in the Cincinnati area a few years after the war.

Then you agree with me when I observe and identify YOUR penchant
for pathological lying, antagonism, and other socially aborrant
behaviour. Bravo. A brave step forward, Lennie.

Now...what can we do to get you to STOP ying and to STOP
misrepresenting the truth?

And by the way, it DOES take medical or psychiatric licensure to
diagnose, Lennie..even in California.

> > Are you not aware that it's a felony to represent yourself as a physician

>He's a hateful little jellybean, isn't he?

He is condoned/tolerated by all the other PCTA extras.

Doesn't look good to the public to see such examples of U.S.
amateur radio defending the Archaic Radiotelegraphy Society
(ARS).

Tsk. Nursie gets all upset and tries to turn EVERY subject thread
into a hate-outlet for nursie's frustrations.

I sure hope Canada doesn't have many like nursie in their amateur radio...there aren't enough telephone exchanges to handle all the "dialing."

...only if those students were PCTA and tried to beat up an NCTA teacher. :-)

Tsk. I never saw anyone flunked out of ANY engineering classes due to not knowing the merge-point of the scales. I just cheat now by punching a few keys on my little HP 32S II...does the scale conversion automatically. :-)

>us in criticism of our own reactions toward Steve's postings. Although
>I am not 100 percent sure (though for statistical purposes am, within
>accepted errors) I do not think he would enjoy that

Agree again, but the question remains unanswered.

It seems to me that the only thing which would please Len would be for us to
change to NCTA opinions and respond to Steve the same way he does. In other
words, it's OK to behave like Len if and only if you agree with all of his
opinions.

>>>>>>> It is hard to control what Jim posts.

>> Not for me!
>
>hehe

The idea that others are somehow responsible for how Steve posts is faulty.
Brian has admitted to intentionally insulting Steve even when Steve did not
insult Brian. "Do as Biran says, not as Brian does"....

>>>>>>> It would be a lot easier if you were the moderator.

>>>>>> I'm not the "moderator" in here. This is an open forum.

>> limited specialty in ham radio.

We had some RTTY stuff at the Penn ham club station. None of it bought new. I
got pretty good at using it.

>> Do you think Len ever bought a new teleprinter for hobby use with his
>> own money?
>
>snort!

but that's what he suggests we hams do!

Here's some more points:

-Those RTTY machines were noisy as heck. Unless a ham had a shack with pretty
good sound isolation, everyone in the house could hear the machine banging
away. But when operating CW, all that's needed is to put on headphones and
nobody else is bothered by the sound. (The sound was beautiful to us hams, but
nearby classrooms didn't appreciate it).

-Those RTTY machines required paper and ribbons to operate. While not
expensive, it was an expense item. You couldn't put just any paper in them.

>>>No, i can't. Unless you are saying you want no testing at all for HF
>>>access, your argument is only half formed. If you ARE saying you want no
>>>testing for the Amateur Radio service, Well, I *most* respectfully
>>>disagree!

>> Bingo.

Note that Len never says what he wants something to be, only what it should not be. Except for his never-retracted demand that FCC enact an age requirement of 14 years for any class of ham license.

That age-requirement thing is important because Len provided absolutely no evidence of any problems caused in the ARS by the licensing of younger people. Not *one* example. Not *one* statistic, enforcement case, or other example. But he somehow knows that such a requirement is needed, even though it has never been part of US regulations.

>>>>> I guess history must be bad, huh?

>>>> For U.S. amateur radio in comparison to the rest of the radio
>>>> world, it IS "bad."
>
>> What is bad about history? What is bad about doing what someone likes
>> to do?

>> To use one of Cecil's phrases: "What is wrong with live and let live?"

>>>> "Bad" in that it lags far beyond the state of the radio art...supported
>>>> only by the radio designers and manufacturers using developments
>>>> from the rest of radio to modernize amateur transceivers so that they
>>>> can best "work" on-off keyed carriers a la the 1920s.

>> Ah - so it's not just the Morse Code *test* which Len thinks is bad,
>> but Morse Code *use* by hams!

>I never did understand that argument anyhow. SSB is what, nearly a
>century old? FM? WAY too much hangup on how we modulate our signals.

SSB in theory dates to 1915; in practice on radio to the mid 1920s (LF) and very early 1930s (HF). Practical FM dates to the 1930s (btw, I saw the actual pioneering FM equipment developed, built and used by Major Armstrong).

And of course Reginald A Fessenden was using AM in 1900, and achieved 2 way transatlantic AM voice operation in 1906.

>Here's a question. Digital is more "up to date" than say SSB. Should
>digital voice be mandated, and SSB phased out ASAP?

Why not? It's what cell phones use....

>But wait! Unless we are willing to accept apparently unacceptable audio
>quality, we have to use a signal that is wider than a SSB signal. And
>the digital units that I have seen have a little quirk of having to
>receive the beginning of a transmission in order to decode the signal.
>So much for listening for a CQ. If you don't hear the beginning, you
>don't hear anything!!!!!

Does any other service "call CQ" anymore? Or operate on random frequencies
instead of predetermined channels?

>But it's closer to the state of the art, it *must* be better. not

"State of the art" is a term invented to sell things. Nothing more. It is used
when A wants B to buy what A has to sell, to replace whatever B has that works.

>>> State of radio art would not pe permitted in the ARS.

>> By whom would it be prohibited?
>
>You do know don't ya?
>
No - really.

If somebody wants to try out something new, they can do it as a ham, with very
few exceptions (like encryption). Hams are already using digital voice on HF.

If Len or somebody like him really wanted to do "state of radio art" on ham
radio, all they'd need would be a license and maybe an STA.

But that's not what it's about.

>>>>>> There's only a few PCTA extras in here. But, they are resolute
>>>>>> and quite uncivil in condemnation of all those who do not love,
>>>>>> honor and obey morsemanship. All readers have seen that.

>>>>> I'm PCTA and an Extra. I respectfully disagree with that statement.

>>>> skill demonstrations. PCTA wound far too easily.

>>>Respectfully disagree. You make the statement, please provide the proof.

>> "The world has advanced" means "you should not use or enjoy Morse Code
>> any more".
>
> Or SSB or RTTY or anything else not "in the now".

Correct. Not "state of the art".
>
>I'm curious just why people would think that using a computer is "High
>Tech" or why using a little walkie-talkie that only works for part of
>the time is "High Tech". It's not high tech, its technology that is
>reduced to practice.

I disagree! "High Tech" is just another sales phrase.

>Morse code is an old comm method. So what?
>
Len doesn't like it. Therefore, he says it must go away. Not just the test, the
code itself.

>> I guess people who like sailboats, stick-shift cars, horseback riding,
>> bicycles and a bunch of other pursuits should listen up too...

Heck, I run for fun and fitness. Very old fashioned. Guess that should not be
allowed either.

Ever read Orwell's "1984", Mike? One of the minor themes in that book was that
the mindset of "newer is better" needed to be implanted in everyone's head
early one. "Ending is better than mending" was a constant theme. Even
children's games had to be made more complex, and requiring lots of specialized
equipment, to keep consumption high. The same mindset opposes simplicity in all
things.

>>>>>> For most folks, that rule-by-intimidation isn't comfortable, isn't
>>>>>> open, certainly isn't conducive (in any way) to discussion...the
>>>>>> intimidation consists mostly of diss and cuss at non-morse folks,
>>>>>> zero discussion.

>>>>> hmmm, I don't see it that way at all. Well, everyone is entitled to
>>>>>their opinion.

>K4YZ's homepage?

Because, Dave...As usual, Lennie was looking for a quick jab to render to his "opponents".

But as usual, he swung blindly, solidly landing a punch in his own eye!

There's only a picture of me on my QRZ page with verbal descriptions of my station. None of the gear therein mentioned is based on "technology that is 50 to 40 years old"...

Neither of the two pages I maintain on AOL (one for myself, the other for my deceased daughter) has any radio gear mentioned therein either.

>> Geez,
>> absolutely zilch time spent in trying to make any of it attractive.
>> Not the stuff of "marketable design!"
>
>That'd be a real problem if it was built to be a marketable design.

Yeppers...there's that "built to experiment with" thing again.

And yet another example of why Lennie the Lame is wrong yet again about Amateur Radio, even if it is over a piece of nostalgia gear.

>> Collins Radios, back when tubes were king, were REAL boat-
>> anchors...and performed very well although their specifications
>> were not great in sensitivity nor in IMD.
>
>Have I told you lately just how much you remind me of John Kerry?

Now I don't care for his politics, but WHY would you want to insult John Kerry like THAT, Dave...?!?! Lennie's an overbearing, pompous "almost been" who insists on trying to make the world fit into his several-decades old perception of the world.

Kery is an overbearing, pom.....

Oh...Yeah...I guess so...CARRY ON ! ! ! !

Dialed.

Interesting conversation about current Ohio law, record keeping and
cross-referencing to files of other agencies when an inquiry or "expression of
concern" has been made.

Especially wherein the "person of concern" has access to and influence
over persons under the age of 18.

Very enlightening.

Does it matter?

Folks talk about the Pope all the time, but don't have to say "The
Catholic Pope". People are smart enough to know he's Catholic.

You are a pathological liar. Everyone else knows it. Too bad you don't
seek some of the "treatment" that you would suggest others need in order to
bring this very destructive personal trait under control, Brain.

>> >You remain recalcitrant in efforts to validate

Nope.

And I don't have to answer my own questions in order to "prove" you wrong,
Lennie (and Brain by proxy...) Both of you have a penchant for setting
yourselves up for failure by not keeping your word, making assertions of fact
that are nothing of the sort, and generally not keeping your OWN stories
straight.

>core of my QST collection.

Cool!

Mine started out in 1968 with my subscription. Got some 50s and 60s copies when a local radio club got rid of their small library. Then various hamfests and such. The ham who got the collection detailed above had some duplicates and gave them to me. A few copies even came from eBay. Recently, a local ham gave me his old library, which was in better shape than some of mine. Etc.

Along the way I accumulated a lot of dupes, which were then sold off. All part of the collecting game.

Len is confused. He cannot deal with the fact that K4YZ and N2EY are not the
same person.

Nothing in the Southgate Type 7 is "cheap". The parts used were very
inexpensive, but of high quality.

>> Geez,
>> absolutely zilch time spent in trying to make any of it attractive.

Wrong again!

A lot of time and effort were spent making it attractive to the intended
market. No time or effort was spent making it attractive to Len.

>> Not the stuff of "marketable design!"
>
>That'd be a real problem if it was built to be a marketable design.

The intended market thinks it's an excellent design and of high quality
manufacture.
>
>> Collins Radios, back when tubes were king, were REAL boat-

Lab tests prove differently - particularly for a meatball 75S3C. See the Sherwood Engineering receiver comparison chart.

What amateur radio HF receivers, transmitters and/or transceivers has Len designed and built on his own time, with his own resources?

Where is Len's home page?

The whole world wonders....

> for less than that.

I don't doubt that. No one ever flunked out of weather school for
that simple equation.

What do they flunk out of law school for?

Oooh. Ow. I've got a headache this morning. Terrible, terrible
dreams. I should have known they're would be a backlash to acting so
crazy.

Sorry, to Dee. I ventured where no sane person should go.

Yep. Dee was correct. :)

Hey, what's that box-van with 911 painted on the side doing in my
driveway?

Hi, hi!

How do you like using the Orion?

I stopped by Ten-Tec last year and looked at it, didn't buy it.

How about just being a good appliance OP and opening an operations
manual or TO? He can't even get the power supply voltage correct.
Wonder how many radios he's fried over the years?

Steve, "putz" and "butts" huh?

Always the very, very strange foci of your attention.

So you're back to calling people the Yiddish word for penis, even
after all the backchannel plea's from the PCTA Bosses. Thumbing your
nose at the Bosses just might be construed as "shooting off your
mouth." You're your own worst enemies.

I'm aware of FAR and the boards they offer, nice stuff, quite
affordable and they can save a lot of drudgery. But I'd still like to
burn a few of my own from scratch just for the helluvait.

> Don't keep old "crap." Save that to toss at NCTAs in

Nah. Just about everything radio in that heap which was more than
twenty years old landed in the dumpster on general principles.

> You are PCTA extra royalty. Save the TUBES, recycle 'em into
> world-beating contest-quality radios to win all those accolades!

I already gave 'em to Miccolis, ALL of 'em. 'Cept for the NOS Eimac
3-500Z. I'll prolly make a lamp out of it.

I hate to bust yer bubble again Sweetums but they're all over the ham
bands used mostly by the "pack radio" crowd. Nice rugged little
minimalist's xcvr but somewhat lacking in rcvr basic performance.

> Nothing earlier?

To have anything earlier, I'd have to find something earlier. All I
have is a piece of something earlier. My late friend W4JBP first became
a ham in 1912 on the family farm near Indianapolis. John gave me the
spark coil from an old Reo truck. It was the basis for his very first
rig. It is coated in pitch and mounted in a small dovetailed wooden
box.

Yes indeed....Glenn Baxter is doing a fine job.

September 15, 2004

Mr. Glenn A. Baxter
RR 1 Box 776
Belgrade Lakes, ME 04918

RE: Warning Notice--Amateur Radio License K1MAN
Case #EB-2004-07

Dear Mr. Baxter:

On April 14, 2004, the Commission notified you of two areas of operation of your Amateur Radio station that, if not corrected, would lead to enforcement action against your licenses and/or designation of your renewal application for a hearing to determine if you are qualified to remain a licensee. Those were: 1) deliberate interference resulting from your commencing operation on top of ongoing communications, in violation of Sections 97.101(a) and (d); and 2) use of your Amateur station for pecuniary interests, in violation of Sections 97.113(a)(2)and (3).

We warned you that your transmissions start up on top of existing communications. We warned you that your publishing a "transmission schedule" does not give you the right to begin transmitting on a certain frequency at a certain time if there are ongoing communications on that frequency.

Regarding use of an Amateur station for pecuniary interest, we warned you you're your Amateur radio program transmissions regularly advertise your web pages at www.K1man.com, and on those pages you advertise items for sale, sales commissions and "overrides" that your State Directors and Section Managers can receive, and detail ways in which your Section Managers can earn money by recruiting members, selling hats, name badges or T shirts.

Not only have these violations not been corrected, but your web site that you continue to advertise offers credit cards and discounts for AARA card holders, in addition to the items and commissions mentioned above. Additionally, you advertised a physics conference and hotel rooms on June 6, 2004.

Additionally, we have received approximately a dozen complaints that your Amateur radio transmissions started on top of ongoing communications of individual operators, as well as on top of ongoing communications of the Salvation Army Team Emergency Radio Net, which handles health and welfare traffic for this season's hurricane victims.

Section 308(b) of the Communications Act of 1934, as amended, 47 U.S.C. Section 308(b), gives the Commission the authority to obtain information from applicants and licensees regarding the operation of their station and their qualifications to retain a Commission license. Accordingly, you are requested to respond to this letter within 20 days from receipt of this letter certifying: 1) what action you are taking to correct these deficiencies in the operation of your station; and 2) specifying what method of station control you have implemented for your Amateur radio transmissions.

Failure to correct the violations will subject you to enforcement action against your station and operator licenses.

In an inquiry of this type we are required to notify you that a willfully false or misleading reply constitutes a separate violation made punishable under United States Code Title 18, Section 1001.

CC: FCC Northeastern Regional Director
FCC Boston Office District Director
Honorable Paula D. Silsby, United States Attorney, U. S. Department of Justice,

The part about interfering with a real emergency net might just be what

is needed for the FCC to actually take action. It eliminates the need
for a decision that could be called subjective based on the content not
being bulletins.

Yes I believe it is necessary to consider them one class. Some new Techs still do test for code and get HF privileges yet will only be listed as Techs while all Tech Plus licensees will be listed as Tech after their next renewal.

> Of course Novice, Advanced and Tech Plus have to decrease, because no new
ones
> are being issued. Extra can only decrease by expiration/cancellation, of
> course.
>
> Note how little Advanced has decreased, (percentagewise) though.

Yet shouldn't the Advanced be decreasing rapidly since they can now go to Extra with little effort (they already know the toughest part of the material from their Advanced study)? Is it that many haven't heard of the licensing changes, or are they hung up on having a class that "proves" they passed 13wpm (it doesn't since waivers have been around for over 10 years), or are they simply satisfied with the range of frequencies that they have?

The minimal decrease in Advanced licensees would tend to lead me to believe that the majority of people now receiving their Extra class licenses are relatively new. They are the ones who just keep going after they pass that first test. This would also explain the apparently low growth in Tech/Tech+ and General. They aren't in those classes long enough to get counted in your postings under those classes.

It's exactly as I thought from their April letter to him, in which they say that he is "generally in compliance with the Commission's rules in the Amateur Service related to broadcasting and information bulletins"

As soon as they did that, he should have felt the noose tightening. It only meant that they had him on other things. So now there is NO argument that "W1AW does it, why can't Glenn" .

hehe, the wheels of the gods turn slowly, but they do turn.

buh-bye!

Yup Dan. Now they don't need to approach it from the dicey "broadcast" angle. That one was always a coin toss, and We might have lost the broadcasts from W1AW in the process. But between interfering with other hams, the money items, and and opening up on top of an emergency net, I would say this should about wrap it up.

>Len is confused. He cannot deal with the fact that K4YZ and N2EY are not the
>same person.

There's a whole lot that he is confused about.

For example, he keeps trying to confuse Amateur Radio with PLMRS, GMRS,
Armed Forces Communications, CB, etc etc etc.

>Nothing in the Southgate Type 7 is "cheap". The parts used were very

>
>>> Geez,
>>> absolutely zilch time spent in trying to make any of it attractive.
>
>Wrong again!
>

>A lot of time and effort were spent making it attractive to the intended
>market. No time or effort was spent making it attractive to Len.

Of course...the Supreme Engineer forgot that the purpose of the project
was to provide a functional device. Jim's radio did just that. Mission
accomplished.

>>> Not the stuff of "marketable design!"
>>
>>That'd be a real problem if it was built to be a marketable design.

We forget Lennie's only reason for being a "radio professional"...profit.

WE do what we do for FUN!

Lennie's NOT a "fun" person.

>>> Collins Radios, back when tubes were king, were REAL boat-
>>> anchors...and performed very well although their specifications
>>> were not great in sensitivity nor in IMD.
>

>
>What amateur radio HF receivers, transmitters and/or transceivers has Len
>designed and built on his own time, with his own resources?
>
>Where is Len's home page?
>
>The whole world wonders....

Lennie once HAD an AOL page...No pictures or even a remote mention of
radios, but he did make allusion to fantasizing about being the old man that
Ruth Buzzy (the comedienne) used to pelt with her purse on the park bench on
the old :Laugh In" series.

Some imagination, eh? Musta be reeeeeeeeal proud of that "radio
professional" background.

Sounds OK for small one-off boards but there are some downsides to
that method. The biggest I see is that you can't get multiple boards
out of a single layout, you have to do the "artwork" for each board
which is the intensive labor part of DIY PCBs. The stripline SWR
bridge I built worked quite well and as a result I got several
requests for copies of the board and I was able to churn 'em out
pretty quickly by simply reusing the "negative". Which I also was able
to keep on file for possible use again.

An advantage of using the commercially-supplied to-scale transfer
patterns for chips and transistors was high accuracy and density
without having to draft and cut them manually. Which is a *lotta* work

if you did a big board like the K3JH keyer which used a couple dozen
chips. Solder-patching the traces was a 5-10 minute per board
no-brainer, I did it to all traces as "insurance". In the end both
approaches have their applications.

>old crap. I have a yen now to build a couple more widgets using
> >homebrewed PCBs but so far I have not been able to find the board
> >stock or chemicals in hobby quantities.
> >
> I have the board stock. Ferric chloride is a different matter...

Bare double-sided board stock is readily available but sensitized
board stock ain't and neither are the chemicals. No doubt it's just a
matter of Googling around to locate the stuff. Maybe the technology
has improved to the point where DIY "board burning" is now a piece of
cake.

> >I fed the aformentioned dumpster a *shoebox* full of those old 7400

Right on the money. As if Sweetums ever sank dime one of his own wad
one into any "station he operated". Fact is that he wouldn't have done
any of it if us taxpayers hadn't paid him to do it . . . Hell, we even

paid him to trudge thru the University of Monmouth Vo-Tech Division.

Sponge. Bleh!

There is no way that any guy/gal even with the world's quietist rcvr
and offscale BDRs and IMD3s is gonna "coexist" and ragchew with
anybody on 7.020 at sundown and beyond during the two big CW DX
contests, just isn't possible in any even remotely practical scenario.
Try it the last weekend of November. Move up the band or go to 30M.
'Way up the band . . .

Agreed. Also, if a Novice takes Element 2, s/he gets a Tech, not a Tech Plus,
and retains HF privileges and Element 1 credit as long as s/he keeps the old
Novice documents.

It's interesting to note that the Tech/Tech Plus total has been dropping.
>
>> Of course Novice, Advanced and Tech Plus have to decrease, because no new

>>
>> Note how little Advanced has decreased, (percentagewise) though.
>
>Yet shouldn't the Advanced be decreasing rapidly since they can now go to
>Extra with little effort (they already know the toughest part of the
>material from their Advanced study)?

Supposedly. But the fact is that not so many Advanceds are upgrading.

>Is it that many haven't heard of the
>licensing changes, or are they hung up on having a class that "proves" they

>passed 13wpm (it doesn't since waivers have been around for over 10 years),
>or are they simply satisfied with the range of frequencies that they have?

Probably a combination. Note also this:

If, after April 15, 2000 but before April 15, 2001, someone presented the FCC with valid CSCEs or other acceptable documents for 5 wpm code and all the writtens required for Advanced, they'd be issued an Advanced without a waiver. Some folks actually did that. Of purely academic interest now, of course.

I think the biggest factors are that some haven't heard of the changes, and others are satisfied with what they have.

There's also the fact that an unknown number are inactive, and may be SK. Remember that Advanced is a very old license class - it goes all the way back to the beginning of the FCC, when it was known as "Class A". When FCC closed Advanced to new issues at the end of 1952, there were well over 40,000 of them, and when the Advanced was reopened to new issues in 1967, their number had not diminished much. There were less than 5000 Extras then, by comparison.

>The minimal decrease in Advanced licensees would tend to lead me to believe
>that the majority of people now receiving their Extra class licenses are
>relatively new. They are the ones who just keep going after they pass that
>first test. This would also explain the apparently low growth in Tech/Tech+
>and General. They aren't in those classes long enough to get counted in
>your postings under those classes.
>
All true. In fact, if someone goes from, say, Tech to Extra in one VE session, they will never show as General on the FCC database.

Two tricks I've read about but not tried yet:

Get a pen plotter (remember them?) and set it up with your favorite CADD system to draw the resist onto the boardstock directly. Of course it's a dedicated piece of hardware....

There are also various techniques where you print a positive (?) onto a transfer sheet which is then ironed onto the boardstock (literally) and peeled off. Then etch.

Then the slickest trick of all:

There are prototype board shops that will make boards for you. You feed 'em the artwork and they make the boards in an almost totally-automated process. Prices are low enough that if you make a few copies it gets really attractive - particularly since the price includes things like coating and component locations. And you don't have to deal with the chemicals or board stock.

>
>Right.

Here's how I'd do it today:

Still need a timebase, input amp/gates/sequencer and counters. But the counters could be simple 2N, not decade counters.

The counter outputs would be managed by a PIC that would also do the job of latching, storage, and up/down add/subtract functions. Also a lot of control functions.
>
>> Or just do a mechanical dial...
>
>Why would I do that when shaft encoders and freq counters are a
>helluva lot smarter way to go??

They're only "smarter" if you have all the goodies to go with 'em. Like the whole synthesizer and the controller and the programming. For a one-off project that gets to be a bit much.

This is one of the trends that makes homebrewing unattractive.

In the ancient times, you mounted the parts on a wooden base, then wired it up. Build a rig in an evening.

Then came metal chassis and panels. Do the metal layout, the metal work, mount the parts, wire it up. Build a rig in a bunch of evenings.

Then came PC boards. Do the metal layout, the metal work, the PC board layout, fabricate the PC boards, stuff the PC boards, mount the rest of the parts. Build a rig in some weeks of evenings.

Then came PICS and other programmable devices. Do the metal layout, the metal work, the PC board layout, fabricate the PC boards, stuff the PC boards, mount the rest of the parts. Then do the software development, debug, program. Build a rig in many weeks of evenings.

Given typical basement resources, I'll have my mechanical dial built and calibrated before the other guy has his PC boards done.

>> of self-funded avocational radio.
>
>Right on the money. As if Sweetums ever sank dime one of his own wad
>one into any "station he operated".

Sure he did. He had a cb set, for one.

>Fact is that he wouldn't have done
>any of it if us taxpayers hadn't paid him to do it . . . Hell, we even
>paid him to trudge thru the University of Monmouth Vo-Tech Division.

So what? That's what it was there for.

Where the disconnect occurs is in situations like this:

Len says there was no use of Morse Code at ADA. Or anywhere in US Army "point-to-point" radio comms back in 1952 or whenever. All done by RTTY...or RATT, as they called it then. All of which is almost certainly true.

Where the disconnect occurs is that Len seems to think that the Army's non-use of Morse then and there means that hams should not use or have a test for Morse here and now. The connection is never explained.

Source record: 97965

Assuming that my receiver (a TS440SAT) isn't giving
me an image, why is there a SW broadcaster at 3965 KHz?
In some foreign language, maybe French. It's not a ham
"broadcaster" selling the Bible or such. But an AM
SW station. Is 80M turning into 40M?

Location: NNJ, time 4:26 zulu on Oct 3rd.

You guys deserve each other....HA!!!! now for a real
BWWWWWWWWHHHHHHHHHHHHAAAAAAAAAAAAAAAAAAA!!!

Mr. Glenn A. Baxter
RR 1 Box 776
Belgrade Lakes, ME 04918

RE: Warning Notice--Amateur Radio License K1MAN
Case #EB-2004-07

Dear Mr. Baxter:

On April 14, 2004, the Commission notified you of two areas
of operation of
your Amateur Radio station that, if not corrected, would
lead to enforcement
action against your licenses and/or designation of your
renewal application
for a hearing to determine if you are qualified to remain a
licensee. Those
were: 1) deliberate interference resulting from your
commencing operation on
top of ongoing communications, in violation of Sections
97.101(a) and (d);
and 2) use of your Amateur station for pecuniary interests,
in violation of
Sections 97.113(a)(2)and (3).

We warned you that your transmissions start up on top of
existing
communications. We warned you that your publishing a
"transmission schedule"
does not give you the right to begin transmitting on a
certain frequency at
a certain time if there are ongoing communications on that
frequency.

Regarding use of an Amateur station for pecuniary interest,
we warned you
you're your Amateur radio program transmissions regularly
advertise your web
pages at www.K1man.com, and on those pages you advertise
items for sale,
sales commissions and "overrides" that your State Directors
and Section

Managers can receive, and detail ways in which your Section Managers can
earn money by recruiting members, selling hats, name badges or T shirts.

Not only have these violations not been corrected, but your web site that
you continue to advertise offers credit cards and discounts for AARA card
holders, in addition to the items and commissions mentioned above.
Additionally, you advertised a physics conference and hotel rooms on June 6,
2004.

Additionally, we have received approximately a dozen complaints that your
Amateur radio transmissions started on top of ongoing communications of
individual operators, as well as on top of ongoing communications of the
Salvation Army Team Emergency Radio Net, which handles health and welfare
traffic for this season's hurricane victims.

Section 308(b) of the Communications Act of 1934, as amended, 47 U.S.C.
Section 308(b), gives the Commission the authority to obtain information
from applicants and licensees regarding the operation of their station and
their qualifications to retain a Commission license. Accordingly, you are
requested to respond to this letter within 20 days from receipt of this
letter certifying: 1) what action you are taking to correct these
deficiencies in the operation of your station; and 2) specifying what method
of station control you have implemented for your Amateur radio
transmissions.

Failure to correct the violations will subject you to enforcement action
against your station and operator licenses.

In an inquiry of this type we are required to notify you that a willfully
false or misleading reply constitutes a separate violation made punishable
under United States Code Title 18, Section 1001.

CC: FCC Northeastern Regional Director
FCC Boston Office District Director
Honorable Paula D. Silsby, United States Attorney, U. S. Department of
Justice,
District of Maine
David Collins, Assistant U.S. Attorney and Chief, Civil Division,
U. S. Department of Justice, District of Maine

Yeeee-haw! One of those was my very first "transmitter"!

In seventh or eighth grade I found a big thick dusty 1920s compilation of DIY projects which had appeared earlier in Popular Mechanics in the jr. high library. What there was of it. 1950 timeframe. Lotta radio projects and I built a couple crystal sets from the articles. None of this 1N34 nonsense, go find a chunk of Galena then go find a hot spot on it with a home-brewed cat whisker . . worked.

There was an article on building a spark TX based on a Model T Ford spark coil which is obviously the same critter Reo used. I went spark coil hunting and bought mine from J.C. Whitney which stocked heaps of Model T parts and diddled with it. My Lionel train transformer did a good job as it's "power supply".

I wrapped a dozen or so turns of wire around the wooden box to serve as the "secondary" of the spark coil and grounded one end of it to a copper water pipe in the rafters. Then I strung up some wire from the "output" end of the secondary fom my cellar "laboratory" to an apple tree out back. Connected a J-38 between the Lionel xfmr output and the spark coil primary and was set to hit the airwaves.

I needed somebody to listen for me and after several days of getting patted on my noggin and being written off as a nutcase I managed to finally recruit George Barnum who lived a block and a half away to listen for me. His older brother had a radio and TV repair shop so George sorta understood what I was up to. He heard me *good* when I fired the thing up on sked.

The problem was that I really screwed up by arranging the sked when every houswife in town was listening to the Don McNeil Breakfast Club Hour while they were doing their ironing. I completely obliterated the AM b'cast band for blocks around, the phone rang off the hook and Mom not only terminated my Grand Experiment but almost terminated me too. Again.

. . . growing up is such a bitch . .

Sorry, Brain, no "back channel pleas". (Note to TypoGod...It's
"pleas", not "plea's")

Lennie's a putz. That's been proven. It's his own doing.

As for the butts, it's his own that he keeps showing out...Again, it's his own doing. He got caught doing EXACTLY what he tells others to not do. Documented. Proven. Didn't require any help from me.

As for who is whose worst enemy, you should stop and do the math, Brain.

Take your shoes off if you need extra help.

There is no "CW subband" on 40 meters.

The ONLY "CW subbands" in the US Amateur Radio Service are on 6 and 2 meters.

I am not sure how far down into the Amateur allocation it goes,
but there is broadcasting allowed on that end of the band outside of
Region 2.

> Florida. Find out the details on Amateur Radio Newsline report
> number 1416 coming your way right now.

> RESCUE RADIO: HAM RADIO MEETS HURRICANE JEANNE

Hmmmmm...Not necessarilly a "policy" tem, however certainly of
interest specifically to Amateur Radio Operators.

Snip to...

> THE BPL FIGHT: PERTH INTERFERENCE NOT BPL RELATED

BPL certainly is of interest and a hot "policy" topic in several
different forums, this one included.

Snip to...

> THE BPL FIGHT: FCC TO RELEASE R&O ON BPL ROLLOUT

As I was saying...

Snip to...

> THE BPL FIGHT: BPL COMES TO CENTRAL VIRGINIA

Yet another definite policy issue item.

Snip to...

> THE INTERNET: US FALLING BEHIND IN BROADBAND ROLLOUT

Definetly a policy issue item. Directly related to AMATEUR
policy, since the methodology of deployment affects us...

Snip to...

> CHANGING OF THE GUARD: STAN BURGHARDT, W0IT - S.K.

And snip to...

> CHANGING OF THE GUARD: ROGER BAKER, G4IDE - S.K.

Sad news, indeed. Not policy, however of interest to Radio
Amateurs.

Snip to...

> ENFORCEMENT: KEEP OFF 10 METERS

Do I even need to mention this one...?!?!

Snip to...

> ENFORCEMENT: A DEAL A PIRATE COULD'T REFUSE

Or this?

> RESCUE RADIO: FCC PARTICIPATES IN COUNCIL ON EMERGENCY PREPAREDNESS
> AND INDIVIDUALS WITH DISABILITIES

Emergency Services AND of general interest to Amateurs.

> HAM RADIO ON THE INTERNET: BIG DATABASE UPGRADE AT QRZ.COM

More Amateur Radio-specific stuff. Not policy oriented, but
again, of specific interest to all Radio Amateurs.

Snip to...

> THE SOCIAL SCENE: THE WSWSS VHF/UHF CONFERENCE IN CA IN OCT

Want to bet that they discuss issues of interest to Amateur Radio
policy at this convention? Think ANYone might be interested?

Snip to...

> THE SOCIAL SCENE: OPRC HAMFEST IN AZ. IN OCTOBER

More fun stuff...

Snip to...

> ARNEWSLINE(TM) SUPPORT FUND REPORT WITH N6TCQ
>
>
> Audio report only: Hear it at www.arnewsline.org

UH OH! THEY WANT MONEY, DIETER! SAVE US, DIETER, SAVE US ONE
AND ALL RIGHT NOW!

Snip to...

> RADIO HERITAGE: NAVY TO CLOSE SUB COMM CENTERS

Certainly of interest to a great number of present day Amateurs
who cut thier radio teeth as RM's in the Navy.

Also of "policy" interest since these guys are going QRT, does
that preceed a possible introduction of Amateur activity to this part

of the spectrum?

Snip to...

> HAM RADIO IN SPACE: ISS REPEATER ON AGAIN

There's some more of that confounded Amateur Radio stuff being
discussed in an Amateur Radio forum by Radio Amateurs...I can REALLY
SEE how Dieter get's so mad at them...

Snip to...

> HAM RADIO IN SPACE: MIKE FINCKE ON THE AIR

STOP IT, BILL PASTERNAK! STOP DISCUSSING AMATEUR RADIO STUFF IN
AN AMATEUR RADIO FORUM...! ! ! WHAT'S WRONG WITH YOU ANYWAY...?!?!

> DX

Whoa is me...More Amatuer Radio stuff. Next thing ya know
they'll be offering money to teenagers for thier continued education.
Sheeesh.

Snip to...

> THAT FINAL ITEM: THE ARDF REPORT

Well...that just seals it. I've had ALL I CAN TAKE of this...I
just can't stand reading Amateur Radio stuff in an Amateur Radio
forum...

Ya missed the point.

"Attractiveness" is in the eye of the beholder. Look at how clothing designs
have changed over the years.

I find that most of the "modern ready-built" radio sets are very unattractive.
Cluttered front panels, poor color choices, knobs and displays way too small
and too close together, etc., etc. So I purposely avoid such design in my
projects. If the set is a little bigger because of it - so what?

>Jim's radio did just that.

And much more.

There is when you try to force square pegs into round holes.

Lennie has that very hammer in his hands, determined to make the wrong
pegs fit for the wrong reasons.

>> WE do what we do for FUN!
>
>Also service to our country.

Yep...Of course now that you alluded to "service" and Amateur Radio in the
same sentence, His High Holiness of Radio will launch into yet another analogy
between us and the Nazi Party.

>> Lennie's NOT a "fun" person.

>Right on the money. As if Sweetums ever sank dime one of his own wad
>one into any "station he operated".

WRONG. INCORRECT. ERROR!

PLMRS VHF two-way, base and mobiles, as part of a partnership...
which required a helluva lot more than a "dime." :-)

Tsk.

>Fact is that he wouldn't have done
>any of it if us taxpayers hadn't paid him to do it . . . Hell, we even
>paid him to trudge thru the University of Monmouth Vo-Tech Division.

What do you mean "we paid," Kellie?

Were you a "taxpayer" in 1952? How much did you actually pay ME?
:-)

Well, isn't that so terrible...a citizen volunteers for military duty and serves honorably, then some arrogant elitist comes along and calls all such for "drudges." His noble, elite, royal self was TOO GOOD for any such menial task such as defending this country.

God forbid any HARM that might come to blessed royalty such as his noble self from actually SERVING his country!

It was at the Fort Monmouth, NJ, Signal School, not a "university." As a member of the United States Army.

Feel free to continue looking down your noble, royal nose at veterans who volunteered. No problem. You won't change, not even if you get all the peasants to eat cake instead of hard-to-get bread. Madame la Guillotine will have the cure.

Meanwhile, go ahead, continue to damn the peasantry. Isn't it awful that the "peasantry" have freedom of speech? Tsk.

>Sponge. Bleh!

Ooooooo...the ELITE speak against the "drudges!"

>You do your things, I add my things and we get the job done. But
>Sweetums can do it ALL . . . of course his history proves otherwise.

Tsk. "My history" disproves Kellie's ASSumptions.

But...he is of the nobility, the elite, and doesn't recognize "drudges"
who worked for a salary. :-)

>Lemmee know when you get yer home installation of Microstation to spit
>out the plane and torsional moments of inertia of a tower section.

...and don't forget to inform everyone that MECHANICAL elements
of antennas are MUCH MORE important than any menial
electrical "drudge" characteristics.

Why don't you two sweetums move this to private e-mail? Or are
you bound and determined to turn this public-access newsgroup
into a cozy little private chat room suitable only for PCTA extras?

Tsk, it's not even a "question" to the PCTA. Simply do as they
tell one to do and that, intrinsically, is "without error!" :-)

>It seems to me that the only thing which would please Len would be for us to
>change to NCTA opinions and respond to Steve the same way he does. In other

PCTA extra Double Standard: It's okay to treat NCTAs like dirt,
smutz, river bottom slime, etc., because the PCTA think they
deserve it. Blow the sanctimonium for any arrogant elitist PCTA
behaving every which way but loose 'cause they be "okay." :-)

>>>>>>>> It is hard to control what Jim posts.
>
>>> Not for me!
>>
>>hehe
>
>The idea that others are somehow responsible for how Steve posts is faulty.

Riiiight...all those who oppose nursie are "at fault!" [from the PCTA
extra Double Standard Handbook]

Gotta love the rationalizing carried out to absurdity by the PCTA.

>Perhaps Len just wants all opposing opinions squelched.

No "perhaps," "sweetums" (a Kellie-ism).

It's impossible to squelch the PCTA...they don't have squelch
controls...but they have lots of knobs that get tweaked... :-)

>>Have you ever seen an old married couple where the Husband and wife
>>spend a lot of time bickering at each other? Yet they have been married
>>for years and years.
>
>>Its what works for them!
>
>There was an old radio series called "The Bickersons" which was just that.

Wow! Time Machine Time!

That radio series starring Don Ameche and Frances Langford was
a bit BEFORE Jimmie's LIVE listening?

Is Jimmie's "other" hobby listening to CDs of OLD radio shows? :-)

>Whether such inteeraction "works" is debatable. I say it's dysfunctional and
>destructive. It usually exists because the people involved cannot imagine
>anything else.

Tsk. Sounds like another person needs their "psychological
credentials" checked for authenticity. :-)

>>For all its sound and fury, it signifies nothing.
>
>I say it signifies immaturity and lack of imagination on the part of the
>name-caller.

Tsk. In that case, under those rules, all the PCTA in here are
chin-deep in IMMATURITY. It's a given that their "imagination"
is limited to fantasies of maintaining the standards and practices
of the 1930s into this new millennium...

>>And I wouldn't mind being able to better perform Morse code, but don't
>>lose any sleep over it. So that puts us at distinctly different points
>>of the spectrum. Yet we are both PCTA.
>
>Because we see the value of the code and the code test.

The Holy Grail of the Church of St. Hiram.

What next? "The Amateur's Code" transformed to The Ark of the
Covenant?

Talk about blowing their own shofar...!

>> hehe, I must be your straight man today, Jim!
>
>Sometimes all one has to do is write the plain, simple truth, Mike..

Most of the time my replies "seem to write themselves!" :-)

[guess who wrote that phrase? hee hee]

>So who is oppressing whom? If any of us told Len to shut up, he'd go
>ballistic, complain to ISPs, etc.

Oh, my, Jimmie KNOWS the future! :-)

Several in here have stated publicly, "be quiet and take the damn
test!" That's rather close to being told "shut up" to ordinary folk.

PCTA extra Double Standard does not recognize such things as
nasty. They can say it but no NCTA can. :-)

>>> Now - did the US Army not use any morse code after 1952?
>>> How about the US Navy? COast Guard? Air Force? Marines?
>
>Of course they did.

And Jimmie and Mikey were THERE to prove it! [gotta love it]

Tsk. Jimmie and Mikey ought to look beyond the ARRL
phrases and ask the military what is actually used. One on-line
source is the USAF's free download "From Flares to Satellites,"
available at the USAF Communications Command website. An
informative small book.

I've mentioned that before in here. Matters not to Jimmie and
Mikey because they WERE THERE and KNOW? Riiiight...in
their dreams they were...

I've pointed out all sorts of references and sources of information
for quite a while in here on the REST of the radio world and what
is used there...but "that does not apply." The PCTA still think
that morsemanship is a required skill in the U.S. military and that
radiotelegraphers are "still needed!" Wrong, of course, but it
seems that the PCTA extras just don't believe it...it defies their
Belief System.

>>> Perhaps Len wants *all* amateur radio tests eliminated.
>
>>I am beginning to suspect that may be the case..
>
>Me too. Make amateur radio just like cb. No legal homebrewing, no tests, no
>Morse code at all.

Tsk. ERROR. WRONG. INCORRECT.

I've advocated TOUGHER written tests for U.S. amateur radio,
never total elimination of the written test. That's in Google.

I haven't mentioned that in the last few years because there's too
much ignorance of both theory and regulations on the part of those
self-righteous PCTA.

>>> Do you think Len ever bought a new teleprinter for hobby use with his
>>> own money?
>>
>>snort!
>
>but that's what he suggests we hams do!

I've never suggested that. I've bought and contributed three surplus
Western Union Model 19s to charity, a group that overhauled TTYs
for use by deaf people. That was before the solid-state TDDs
(Telecommunicaitons Devices for the Deaf) became more
commonplace, less expensive and (lately) having a subsidy by
various government plants to aid the deaf.

Are you now going to search through Google again looking for
something that says "I suggested that hams use teleprinters?"

Electronic terminals that can emulate teleprinters of any rate
have been around since 1975, almost 30 years. The IBM PC
has been around since 1981 (at least) and that is 23 years ago;
it can emulate a teleprinter very well just by using software for
that purpose.

>-Those RTTY machines were noisy as heck. Unless a ham had a shack with pretty
>good sound isolation, everyone in the house could hear the machine banging
>away. But when operating CW, all that's needed is to put on headphones and
>nobody else is bothered by the sound. (The sound was beautiful to us hams,
>but nearby classrooms didn't appreciate it).

Those weren't "RTTY" machines...they were TTY machines. The R isn't
there unless it is connected to a radio transmitting apparatus.

Tsk. So, for at least 29 years there have been very SILENT electronic
terminals available which could be used in any residence...much like
personal computers are used today in about one household in ten in
the USA.

Tsk, tsk. For all the "poll information" from Jimmie, one would think
that hams "didn't use teleprinter mechanisms because of the noise."

That doesn't seem to be the case with several ham user groups
involved with actual RTTY.

>-Those RTTY machines required paper and ribbons to operate. While not
>expensive, it was an expense item. You couldn't put just any paper in them.

Wow! "Big drawback!" Cheap paper on a roll is "so difficult to
get!" BS. ERROR. INCORRECT.

From Model 15 to Model 33 Teletype Corporation teleprinters, the
ribbons were standard typewriter ribbons one can get today at
Staples and Office Depot. For that matter anyone can buy paper
rolls at those places today.

I get the picture of Jimmie busy "recycling" paper pulp to make
the greyish notepads he uses to design tube equipment in the
1990s...to fit with the alleged "$100" cost of the "famous" Type 7.
The felt-tip ink marker used to make "front panel markings" on
that Type 7 are an "expense item!" :-)

>>> And no use of HF. All of amateur VHF/UHF has been available without a
>>> code test since 1991.
>
>And for a 5 wpm code test even longer.

Wow! "The world of radio" open to anyone who can pass a morse
test! Wow! [bwahahahahahhahahahahhoohoohoohoohoo]

Myself and others were operating HF transmitters 51 years without
one single morse test and NO requirements for an amateur license!

Sunnuvagun!

>>>>> GPSS has been with the world (along with GLONASS) for two decades
>>>>> and with civilian users for over a decade, yielding precise terrestrial
>>>>> location determination AND precise time...all over radio. Radio clocks
>>>>> are available at consumer electronics stores for under $30 that update
>>>>> themselves automatically to precise time from several LF broadcast
>>>>> services. No need to tie into wire services or listen on HF for
precise
>>>>> time...the little inexpensive radio clocks offer one-second-per-day
>>>>> accuracy, along with calendar information without operator assistance.
>
>No use of HF either.

WRONG. ERROR. INCORRECT.

Heathkit had a "radio clock" which tuned to WWV on HF. To jog
your memory (since it wasn't an item of ham lore), that is mentioned
on the NIST website under the history of radio clocks.

>>> Should WWV be shut down?
>>
>>All those people with the ill named "atomic clocks" might be disappointed!

>>
>What you're really seeing is a list of reasons why *HF* isn't needed
>anymore....

Tsk. You think (imagine) conjectures, therefor it "is?"

Tsk, tsk. Read the FCC's own Report & Order on why hams got
only five "channels" and not a whole band (to play in). It's on
public view. Do you need tips on how to get there on the 'web?

>>> Has the internet replaced amateur radio?
>
>Note the lack of answers...

Tsk, you demand IMMEDIATE answers to YOUR questions! :-)

Poor baby...stamping your little feet and having a tantrum?

>Of course! But consider the billions spent to build the enormous
>infrastructure. And note that the whole cellular system is based on the idea
>that radio only carries the signal the short distance from the customer to
>the nearest cell site, not radio the whole way.

So...you define "radio" as ONLY the way hams do it?

Tsk. That shoots down all of broadcasting, all satellite services
(including relay of any radio service desiring to rent transponder
space), radiosondes, two-way radio used by public safety officials,
and the entirety of the U.S. military!

Offhand, I'd say your denigration of all radio that is NOT on the
ham model is a bit off-center.

>
>>>>> All that while, during a veritable many-quantum-level-jumps in
>>>>> technology, U.S. amateur radio "qualifications" (test regulations)
>>>>> have required the morsemanship ability test to authorize operation
>>>>> below 30 MHz by amateurs. That is still required.
>
>>> That's a good thing.
>
>Because amateur radio has different goals, purposes and resources.

Of course...it is to preserve and protect the sanctity of the morse
code in radio. [nobody else cares to...]

>Note that Len never says what he wants something to be, only what it should
not
>be. Except for his never-retracted demand that FCC enact an age requirement of
>14 years for any class of ham license.

You forgot to add "...and therefore Len should be barred forever from
saying anything about anybody under penalty of law!" [do not remove
that tag]

>SSB in theory dates to 1915; in practice on radio to the mid 1920s (LF) and
>very early 1930s (HF). Practical FM dates to the 1930s (btw, I saw the actual
>pioneering FM equipment developed, built and used by Major Armstrong).

That's COLONEL Armstrong to the "drudges" who never served. :-)

Two-way FM radio was pioneered by Link and Motorola with Dan
Noble as the star of doing that. Ol' Ed A. was only into broad-
casting on FM.

By gosh, you've done a one-upmanship on Armstrong's "actual
pioneering" stuff. I've only used, operated, maintained SSB on HF
51 years ago...not near as good as someone touring a museum,
huh? :-)

>And of course Reginald A Fessenden was using AM in 1900, and achieved 2 way
>transatlantic AM voice operation in 1906.

Riiiight...and all AM broadcasting adopted the Fessenden system
of modulation putting one microphone in series with the antenna
lead! Riiiight. WRONG. ERROR. INCORRECT. NOBODY
followed that example...for rather obvious technical reasons that
anyone who has "credentials" in technology SHOULD HAVE
KNOWN. Ptui.

>>Here's a question. Digital is more "up to date" than say SSB. Should
>>digital voice be mandated, and SSB phased out ASAP?
>
>Why not? It's what cell phones use....

Tsk. Cellular telephones did NOT begin with digital modulation.

ERROR. INCORRECT. WRONG.

Besides, why should amateur radio in the U.S. follow ANY other
radio service?

Isn't U.S. amateur radio all about preserving the glory and majesty
of morse code communications below 30 MHz?

>If somebody wants to try out something new, they can do it as a ham, with very
>few exceptions (like encryption). Hams are already using digital voice on HF.

Riiight. About like old Reggie F. got all broadcasters to do AM
with a microphone in the antenna lead. :-)

DRM has been test-broadcasting on HF for over three years. The
only hold-up is standardization on a A digital system since there
is another standard vying for that. Both have been successful.

>If Len or somebody like him really wanted to do "state of radio art" on ham
>radio, all they'd need would be a license and maybe an STA.

Riiiiight. I should look to the "model" of ham kluges of tube
boxes "designed" in the 1990s...

>But that's not what it's about.

What it's "about" in here is a bunch of PCTA extras wanting to
beat up NCTAs about the morse code test. :-)

>>> Note that Len assumes you are a white male, Mike...
>
>Also assumes that about me.

Are either or both of you non-white females? Girlie men? :-)

No problem, "sweetums," your posting I'm replying to is FULL
of assumptions (all invalid) that YOU made. :-)

>"Do as Len says, not as Len does"

Riiiight...exercise freedom and independence, do what everyone
wants to do under minimal regulations.

The PCTA can take up collections to build an artifact museum
for the Archaic Radiotelegraphy Society. I've nothing against
that. :-)

>>Morse code is an old comm method. So what?
>>
>Len doesn't like it. Therefore, he says it must go away. Not just the test,
>the code itself.

Tsk, tsk, tsk, "sweetums," you've got your ASSumption in a sling
again.

I'm on record as saying anyone can USE morse code all they want
but the TEST should go.

...and I'm NOT against the use of marking pens to do such
professional marking on the "front panels" (boxes) of 1990s
tube kluges. Do what you want.

>Heck, I run for fun and fitness. Very old fashioned. Guess that should not be
>allowed either.

Think of Jim Fixx and what happened to him... :-(

>>Say something often enough, and at least you will believe it!! 8^)
>
>Exactly

I agree with that...because that is why U.S. amateur radio is
the last radio service to require a morse code test for a license
having below-30-MHz privileges. :-)

God bless those olde-tyme hamme morsemen...they've insured
that future generations will be held to THEIR mighty macho
morse standards!

>>>>> Not conducive to a hobby activity. More conducive to a dictatorship.
>

>Like telling people to shut up...

"Shut up, just take the damn test!" (from others to me...)

Hello? Is your grace irritated at not being revered and respected?

:-)

>I hate to bust yer bubble again Sweetums but they're all over the ham
>bands used mostly by the "pack radio" crowd. Nice rugged little
>minimalist's xcvr but somewhat lacking in rcvr basic performance.

Awwww...not up to Kellie's mighty standards? Tsk.

Are you in the tRoll opinion against the "shack on the belt crowd?"

"Minimalist?" It does SSB very well. It includes a lot of self-
check features as standard.

Maybe you want a "top of the line contester" transceiver that not
only has all the super selectivity and sensitivity to leap tall pileups
but also keeps the logs and prints out QSLs? All on battery power?
:-)

>> That's why Phil Smith came up with the Smith Chart back before

>> copyright).
>
>I'm not new to NEC either Sweetums, I have NEC2 two mouse clicks away
>from here along with it's Nec Win Plus interface.

Riiiiiight...You are so schmardt in methods of moments theory...

>> Too bad the USN types at the "captain's table"
>> didn't mention that to you...
>
>. . . in 1963??

Tsk. Didn't the USN use radio then?

Oh, yes, they used only morse code! Morse code gets through
when anything else does...

What DID you talk about? How "rough" the "war" was? Did YOU
have some "hostile actions" and collect a shoebox full of medals?

Oh, I AM sorry. I'm acting like a "drudge." I'm not supposed to
DO such things, being an NCTA and all. This newsgroup is
RESERVED for the PCTA extras, the elitists who meet to beat.

Steve, little nits like to pick little nits.

1. Hans has stated that the mode is CW.

2. It is a CW subband by Gentleman's Agreement.

3. Honoring the Gentleman's Agreements is Good Amateur Practice.

4. Rileys says not using Good Amateur Practice is Enforceable.

5. You're a nit.

"Sorry Hans, MARS >>>IS<<< Amateur Radio!"

Yet MARS doesn't use CW, subbands or not. Hi, Hi!

Best of Luck!

September 15, 2004

Mr. Glenn A. Baxter
RR 1 Box 776
Belgrade Lakes, ME 04918

RE: Warning Notice--Amateur Radio License K1MAN
Case #EB-2004-07

Dear Mr. Baxter:

On April 14, 2004, the Commission notified you of two areas of operation of your Amateur Radio station that, if not corrected, would lead to enforcement action against your licenses and/or designation of your renewal application for a hearing to determine if you are qualified to remain a licensee. Those were: 1) deliberate interference resulting from your commencing operation on top of ongoing communications, in violation of Sections 97.101(a) and (d); and 2) use of your Amateur station for pecuniary interests, in violation of Sections 97.113(a)(2)and (3).

We warned you that your transmissions start up on top of existing communications. We warned you that your publishing a "transmission schedule" does not give you the right to begin transmitting on a certain frequency at a certain time if there are ongoing communications on that frequency.

Regarding use of an Amateur station for pecuniary interest, we warned you you're your Amateur radio program transmissions regularly advertise your web pages at www.K1man.com, and on those pages you advertise items for sale, sales commissions and "overrides" that your State Directors and Section Managers can receive, and detail ways in which your Section Managers can earn money by recruiting members, selling hats, name badges or T shirts.

Not only have these violations not been corrected, but your web site that you continue to advertise offers credit cards and discounts for AARA card holders, in addition to the items and commissions mentioned above. Additionally, you advertised a physics conference and hotel rooms on June 6, 2004.

Additionally, we have received approximately a dozen complaints that your Amateur radio transmissions started on top of ongoing communications of individual operators, as well as on top of ongoing communications of the Salvation Army Team Emergency Radio Net, which handles health and welfare traffic for this season's hurricane victims.

Section 308(b) of the Communications Act of 1934, as amended, 47 U.S.C. Section 308(b), gives the Commission the authority to obtain information from applicants and licensees regarding the operation of their station and their qualifications to retain a Commission license. Accordingly, you are requested to respond to this letter within 20 days from receipt of this letter certifying: 1) what action you are taking to correct these deficiencies in the operation of your station; and 2) specifying what method of station control you have implemented for your Amateur radio transmissions.

Failure to correct the violations will subject you to enforcement action against your station and operator licenses.

In an inquiry of this type we are required to notify you that a willfully false or misleading reply constitutes a separate violation made punishable under United States Code Title 18, Section 1001.

CC: FCC Northeastern Regional Director
FCC Boston Office District Director
Honorable Paula D. Silsby, United States Attorney, U. S. Department of Justice,
District of Maine
David Collins, Assistant U.S. Attorney and Chief, Civil Division,
U. S. Department of Justice, District of Maine

Enclosed are recordings of violations on the repeater by N8WWM. The
transmissions continued for a considerable time and there was no evidence of
a control operator.

This newsgrope is full of square pegs. Those are also called
"PCTA extras." :-)

> Lennie has that very hammer in his hands, determined to make the wrong
>pegs fit for the wrong reasons.

Tsk, tsk. I have three hammers, one a very heavy-duty type, but
need none of them in here. An ounce of pressure off the end of
my finger tips is enough to cause most PCTA extras to go berserk.
Such as yourself. :-)

>>> WE do what we do for FUN!
>>
>>Also service to our country.
>
> Yep...Of course now that you alluded to "service" and Amateur Radio in
the

BWAAHAHAHAHAHHHHAAAAAWHOOOOOHOOOHOOO...!!!!!

"Service to the country!!!!" For engaging in a part-time HOBBY!

Tsk. Delusional nursie, off on another bender. No degree needed
to see the irrationality of delusion.

>>> Lennie's NOT a "fun" person.
>>
>>I'm sure some people think he's fun.
>
> The Marque deSade...?!?!

Coming from Sader and Masoch, that's a typical comment...even if
"marquis" is spelled wrong.

Poor nursie, nuts to the core, an all-year celebratory fruitcake
eating himself delusional on high-calorie irrationality.

Make that "call," nursie, have YOURSELF committed. Do a REAL
service for your country.

>>> Lennie once HAD an AOL page...No pictures or even a remote mention of

In that case the Department of Defense (before Donny R.) is also
"confused." :-)

Nursieworld requires that all radio amateurs be "qualified" by
having a "healthcare professional" license and be members of
the Civil Air Patrol. :-)

It's still possible that nursie is suffering from Post-Traumatic
Stress Disorder as a result of those "seven hostile actions."
Tsk.

Tsk. Kluges are still kluges.

You should call it "modern radio art" and thereby rationalize that
you are "advancing the state of the radio art!" :-)

Riiiiiight...by making "modern" radio designs using tubes in the
1990s...:-)

>I find that most of the "modern ready-built" radio sets are very unattractive.

...just like all the other radio amateurs? :-)

Why are the designer-manufacturers continuing (after years of doing
so) to design such "unattractive" exteriors? Is it all a conspiracy
against the superior esthetic sense of Jimmie?

>Cluttered front panels, poor color choices, knobs and displays way too small
>and too close together, etc., etc. So I purposely avoid such design in my
>projects. If the set is a little bigger because of it - so what?

Kluges are still kluges. :-)

Decals for radio markings have been around for a half century...are
clearer to read that scribbled felt-tip marker pen markings. But, if
those are "beauty" to you, feel free to enjoy it. Try NOT to impose
your "standards of beauty" (radio-wise) on others.

>>Jim's radio did just that.
>
>And much more.

Kluges are still kluges.

>
>I missed that...

It was easy to "miss." It never existed. :-)

Nursie went off the deep end without his little water wings again.

Tsk. You name-callers ought to look in MSN. :-)

>>Some imagination, eh? Musta be reeeeeeeeal proud of that "radio
>>professional" background.
>
>Whatever

I am very pleased with my career choice...interesting, challenging
work doing many things over the last half century in radio and
electronics. Am still involved, though not in "regular hours." :-)

Do you need a resume? A little precis of my places of employment?
I've given that in here before...but that only caused nursie to go off
into some strange orbit and get very angry. I realize that it is a
"felonious" act to irritate another PCTA extra in here so I don't
volunteer such information except on request. We can't irritate the

ultra-thin-skinned mighty macho morsemen in this newsgrope. :-)

How about just respecting each other as human beings?

Everyone want's to be elevated above the next person, and it is so
typical of the old guard in amateur radio who were raised on the
inventive licensing tit.

Kelly, I never have had an HF radio that came with an antenna.
Perhaps your do. Yet I managed to build my own cubical quad on HF,
dipoles, off-center fed dipoles, and EDZ's for 10 and 6, a hustler
vertical for 40, etc, etc, etc.

But in this particular location, I have very precise requirements and
your one size fits all suggestion just wasn't what I wanted. Thank
you for your suggestion, but don't force it on me. Reminds me of the
time you told me to bend over. Thanks, but No thanks. Some kind of
weird elmering going on where you're from.

Gareeb, I teach Steve something every day. But like in the movie,
"Groundhog Day," my lessons must be repeated again, and again, and
again. But unlike the movie where everyone is unaware that they are
reliving each day, only Steve relives each day, and is unaware of it.
If only one of his "we" would clue him in.

Steve says that on the outside, but there's every indication that he pays detailed attention to the male physique; evidence his repeated posts about putz and butts, and his almost total RRAP concentration on people that he calls pathological liars and social misfits.

Says one thing, does another, i.e., flip, flops!

"Sorry Hans, MARS >>>IS<<< Amateur Radio!"

Wrong Service, Wrong Frequency, Wrong Basis and Purpose.

Best of Luck.

Which is exactly what Baxter wants. He wants this whole thing to be brought up so he can force a ALJ hearing. He then intends to drag the ARRL down with him.

Screw Baxter, I hope they bury his arse under the radio prison.

Perhaps he can go on a DXpedition with that other tried-and-true DXpeditioner, KB1HMW. They can then go see the sights and meet preety fems rather than operate the radios. I am sure they ahve a lot in common.

And so concludes another semi-hostile action reenactment in RRAP-Land.

Goodnight Mrs. Calabash, whevever you are.

NEWS RELEASE

ARLL HQ, Oldington, CO (Oct 1, 2004)

The FCC has leaked a copy of its proposed new Amateur Radio Service rules (Part 97), which will be effective 90 days after being posted in the National Register. They are reproduced below in their entirety, and will not be subject to public comment.

97.1 You are required to pass a stiff technical test to show that you understand how to build transmitting equipment which meets spectral purity specifications of .....blah, blah, blah. You will be issued a callsign when you pass the test. Transmit your call sign once every 10 minutes when on the air.

97.2 Your power limit is 1.5KW to the antenna.

97.3 Here are your bands. Stay inside of them.

97.4 Your are encouraged to tinker and experiment and communicate and do public service and talk to strangers in far away lands and launch communications satelites into space and other technical radio stuff you may think up. The government doesn't care what mode you use for any of this. Work it out among yourselves.

97.5 Play nice. We'll try to keep the CBers out of your hair, and deliberate interference or other assinine behaviour on your part will cause Riley to come and kick your ass off the playground. Have fun.

Love always,
/signed/ FCC

> If you build it, you'll be tempted to use it.

You vastly underestimate my self-restraint. Using a spark rig is something to which I aspire. I have a couple of TNT self-controlled type replica transmitters. If the antenna swung in the breeze, they'd be all over the band. I've resisted the temptation to put them on the air for about a decade.

Ahhh! They have a "William" variant. The Orion is available with a
built-in antenna tuner. I didn't get that model.

You actually disrupted the march around the breakfast table? My pre-ham
radio days were from Hinton, West Virginia with an old doorbell buzzer
and ten-volt transformer. I "worked" Bobby Hayth next door. We were
each using old BC/SW receivers in wooden cabinets but we could have used
any AM receiver on about any frequency at that distance. Let's just say
that the tuning wasn't at all critical. Something about decrement, heh
heh.

Have I ever "treat[ed] NCTAs like dirt, smutz, river bottom slime, etc."?

If so, how?

>>Perhaps Len just wants all opposing opinions squelched.
>
> No "perhaps," "sweetums" (a Kellie-ism).

In other words: "Yes, Len wants all opposing opinions squelched."

> Several in here have stated publicly, "be quiet and take the damn
> test!" That's rather close to being told "shut up" to ordinary folk.

Who wrote that to you, Len? When did they do it?

Did Dave Heil, K8MN, ever write that to you?

Len seems to think that if one person tells him to "shut up", it somehow justifies him telling someone else to "shut up".

That's faulty logic on Len's part.
>
> PCTA extra Double Standard does not recognize such things as
> nasty.

I think it's nasty for anyone to tell another to shut up online. I've never done that. You have, Len.

> They can say it but no NCTA can. :-)

Do you think it's funny?

> that tag]

No, I didn't forget to add anything, Len. I don't want to silence anyone, nor
deny anyone's free speech rights.

I've never told anyone online to shut up.

You have.

>>"Do as Len says, not as Len does"

>>>>>> Not conducive to a hobby activity. More conducive to a dictatorship.
>>
>>Like telling people to shut up...
>
> "Shut up, just take the damn test!" (from others to me...)

Who wrote that to you, Len? When did they do it?

Did Dave Heil, K8MN, ever write that to you?

Len seems to think that if one person tells him to "shut up", it somehow
justifies him telling someone else to "shut up".

That's faulty logic on Len's part.

What? Sorry, but I wan't anything at that point in time.

Hey! What did I just get draggd into, anyway? I don't ercall posting
anything on what the Army and Navy were using in the olde days!

>> Tsk. Jimmie and Mikey ought to look beyond the ARRL

I haven't written that, and I don't think I even think that.... if I
were to even think about it. I think.

Has someone in here been posting things under my name?

> Was there Morse Code in use by the US military after 1952 or not?

Now that I do know. Yes it was. A colleague worked with it during the
early 70's.

But! What does all this military stuff have to do with Ham radio. We
are not military.

I never saw that! I do recall a post where someone said something about
Lenover21 taking a test, but don't recall any of what is in qoutes.

> achievement) to teenagers.

No. As you put it, what I would be "whining" about is the fact that they are HIDING their scholarship funding by calling it something else - a "news gathering expense," when they know full well that it's not. That is a perfect example of one kind of accounting fraud. They are misrepresenting their expenses in order to solicit more donations - and that is what is illegal.

Except that you forget that the charter and guidelines for the "rec.radio.amateur" newsgroups do NOT allow periodic postings without permission - and that "AR Newsline" has permission ONLY for rec.radio.amateur.misc and rec.radio.info (the latter a moderated group). All five versions of the guidelines I found online say the same thing.

Nowhere in your jeremiad do I see a single shred of evidence of illegal
activity by AR Newsline.

Take it to the DA --- they'd probably don't have much humor in their
lives, and your proposed suit would be a welcome chuckle for them.

With all kind wishes,

de Hans, K0HB

Hi!
On http://www.eupolitix.com/EN/Legislation/200305/979dcc8f-93ee-4b61-8daf-2ec2cbba7667.htm you`ll find the information that COM/2002/759 "electromagnetic compatibility" is currently discussed by the european parliament - without beeing noticed by the public. As the introduction is a very serious danger for our hobbies ham radio and shortwave listening there's an urgent need to do something...
The german ham radio society DARC just called all radio amateurs to write a letter to their state's representative(s) at the european parliament (german sample text at: www.darc.de/aktuell/plc)
I think that this action would be more impressive if all european shortwave users would do the same - write to your local representatives explaining to them the importance of undisturbed shortwave reception and the appling international laws (ITU regulations, etc.).

You should distribute and share this idea with other interested groups - tell it local cb clubs or your countries amateur radio society.

And finally: write to your representative who's adress could be found at http://www.europarl.eu.int/whoswho/default.htm

Oh gawd, OK, I surrender, so you sank some coin into the world of blue
dot & green dot radios. Didja get their WTAS (Worked Taxicabs in all
States) award? What's the URL for this "partnership"?

Nah, none of it has anything to do with anybody's military service or lack thereof Sweetums. I simply needed to find out how hard I had to yank yer chain in this topic area before you came unglued again. I expected to have to put up with another round or two but nope, here it is. You usta be a helluva lot quicker Sweetums. Getting OLD is a pain the ass isn't it?

Right on Sweetums, I did exactly that. Except for a bunch of elderly
variable caps which are always nice to have around when cobbling
together matching circuits.

> huh? :-)

Well no, fact is Sweetums that I have a very current tech ham radio
catapult, Miccolis and I used it to launch some Field Day antennas
just a few months ago. He has one of a different design which also
works well.

> >> Tsk. You should use Roy Lewallen's EZNEC. Roy is a long-time

I sure as hell do know what's needed and I also know it's not in EZNEC
Sweetums, not even close. But you obviously don't know so you made an
ass of yourself in public once again because you didn't spend enough
time surfing around the Web to get up to speed on EZNEC before you
spouted off about it.

How many times . . ?

It doesn't have to be, Brian...A great many of my patients are folks well
into thier 80's, and they are active, happy and fulfilled people.

Of course that's there Lennie loses touch...He won't DO anything to get
himself out of his rut, and then blames everyone else EXCEPT himself for his
lack of fulfillment.

>> >You do your things, I add my things and we get the job done. But

I have noticed that Lennie hasn't been so bold as to repost his whole CV
here again since I was able to approach folks who were actaully AT one of them
and do a bit of investigating of my own.

Of course I think Lennie LIKES getting his tail under the rockers...He so
often posts stuff that is so easily disproven with readily available facts that
one wonders what he could have been thinking other than to induce a
self-humiliating scenario.

Oh really?

Surprising, then, that there are 12 other posts by you SINCE this was put
to you.

And you're not the only one with "a life", Dieter.

In addition to my regular employment, I work part time in Chattanooga, 65
miles away. I am the member of 2 Amateur Radio clubs and ARES. I am
moderately active in Civil Air Patrol as both a pilot and an ES instructor.

I also volunteer some time to help families who have care-at-home kids
(such as my daughter was...) so they can get out of the house once in a while.

And I still manage to find time to unravel your drivvel.

Imagine that.

>> And I bet you that for every "valid" deduction YOU produce to "TWIAR",

>Where are you getting that from?

You're the one who used the word "valid contributions" vis-a-vis YOUR
"contributions" to TWIAR, Dieter.

One can only assume you meant that OTHER contributions weren't.

So can we NOW assume that money sent to Bill Pasternak on behalf of ARN
>>IS<< a "valid deduction" per Stussy Rules of Engagement?

>> And Dieter Stussy is going to wail and whine to the FCC about ARN
>> providing incentives and motivation (not to mention support for scholastic

>> we...?!?!
>
>Apparently so, at your initiation of such.

Oh?

Where have I called you an "idiot", or anything else so acidic or
inciteful, Dieter...???

I've said you're mistaken, confused, wrong, foolish and several other
adjectives that civilly describe your obvious errors, but not a single word
that is as confrontational or insulting.

Are you back-channelling with Lennie on Newsgroup Antagonizing 101...???

>> Having trouble expressing yourself adequately without resorting to
>> Lennie/PuppetBoy tactics...?!?!
>

>Is that supposed to mean something to me?

It is if you care to start using words like "idiot" in addressing others.

So far there's only one person in this string of exchanges vis-a-vis Amateur Radio Newsline that's demonstrated a complete lack of situational awareness, and it isn't me.

>> The only person likely to be proven an "idiot", Dieter, will be the
>person
>> who tries to have criminal charges brought against another person with the
>kind
>> of "proof" that you have offered in this forum.
>>
>> But you go right on ahead...I think this is going to be hillarious.
>
>Unless of course someone other than me goes to jail....

Uh huh...

And who do you think that might be?

It won't be me, and it CERTAINLY won't be Bill Pasternak. Not on what YOU have presented as "proof" here...

>> >Apparently, you have no idea of what constitutes fraud.
>>
>> Yes, I do.
>
>Only in your mind.

Why don't you take a few minutes to ask yourself why that was a really stupid thing to say on your part, Deiter, and then come back with a more thoughtful retort.

>Have you ever worked on a case where a person was
>prosecuted for fraud? I have.

Been watching "Court TV", Dieter?

SO FAR you have not even remotely impressed me (or anyone else for that matter) that Bill Pasternak or anyone associated with "Amateur Radio Newsline" has imporoperly or illegally diverted a single dime of funds sent to them.

Please re-read my comments from a previous post as you re-quoted yet did not comment on as below.

They are as relevent now as the were when I first posted them.

>> And so far you've NOT provided this conversation with ONE BIT of data
>that
>> even remotely validates your assertions of it vis-a-vis Amateur Radio
>Newsline
>> or Bill Pasternak.

Robert, the reason is that Dieter's quest is not to limit the "spam" on NG's...It's to conduct a campaign against Bill Pasternak, period.

If Alexander P. Fuddlemeyer III started running ARN and posting here, it would be a moot point...the catalyst of Dieter's hatred, Bill Pasternak, would have been removed.

Dieter demands that ARN stop posting here despite the fact that the content of those "releases" is 500% more relevent to Amateur Radio "policy" than 99.999% of the other posts here.

I believe I clearly demonstrated that in the post that initiated this thread.

Dieter does not "contest" those other posts. They are not posted by WA6ITF.

>early 70's.
>
>But! What does all this military stuff have to do with Ham radio. We
>are not military.

Here's "the short version", Mike:

There *was* a time when the US military (all branches) used Morse Code for radio communications - extensively. Of course after about 1920 or so they used other modes too, but Morse Code on military radio played a central role in WW2 and for many years afterward.

Of course Morse Code for military communications suffers from some basic problems: It's slower than some modes, particularly RTTY, and it requires the use of skilled operators at both ends of a circuit (RTTY requires only that the transmitting op know how to type).

Once upon a time, the need for trained Morse Code radio operators was given as a valid reason for ham radio having a Morse Code test, because hams would then form a source of self-trained candidates for the military. In both World Wars, there arose times when the US military needed to rapidly expand their number of Morse Code radio operators, and many of them came from the ranks of hams of the time.

Of course the US military has pretty much completely phased out the use of Morse Code for radio communications. Probably the last extensive use ended with 1997, when the Coast Guard ended its maritime Morse Code operations.

There may be some very specialized uses for Morse Code in the US military left today, but that's all. Heck, the Navy doesn't even have a "Radioman" title/MOS/job description anymore. So that old reason for a Morse Code test has lost its validity over time.

Where Len fits into all this is that he was at ADA in Japan in the early 1950s. He worked on their radio transmitters there. Their main radio task was long distance communications back to the Pentagon and other locations around the Pacific. ADA didn't use Morse Code; all the messages went by RTTY on fixed, predetermined frequencies determined mostly by propagation.

Len apparently thinks that because ADA transmitter technicians didn't need to know Morse Code to do their jobs in 1952, amateur radio operators shouldn't have to know Morse Code to get amateur radio licenses in 2004. In fact, Len apparently thinks that because ADA transmitter technicians didn't need to know Morse Code to do their jobs in 1952, amateur radio operators shouldn't have had to know Morse Code to get amateur radio licenses for many years before 2004.

Of course, as you say, "we're not military", so that logic is faulty. But it's what Len is yelling about here.

Some time back, I posted a short description (written by others) of operations at radio station WAR early in 1942. Included a description of the use of Morse Code their. Len went ballistic on that one.

Further back, I posted a description of one of the code test used at US Navy Radioman "A" school in 1958 (24 wpm, 5 letter code groups, copy on a typewriter. Maximum allowable errors: 3 in a one-hour session). I don't recall a favorable reaction from Len...

Even earlier, another amateur and professional radio operator (Jeff Herman) posted a fascinating description of what it wa like to operate Coast Guard radio at NMO in Hawaii. Included lots of Morse Code - well into the 1990s. Len's reaction was the now-famous "sphincter post"....

>>>>>>Perhaps Len wants *all* amateur radio tests eliminated.

>>>>>I am beginning to suspect that may be the case..

>>>>Me too. Make amateur radio just like cb. No legal homebrewing, no tests,
>>>>no Morse code at all.

>>> Tsk. ERROR. WRONG. INCORRECT.

>> "That's my opinion and I'm sticking to it."

>>> I've advocated TOUGHER written tests for U.S. amateur radio,
>>> never total elimination of the written test. That's in Google.

>> Where? I don't ever recall reading that from you at all.

>> Was it in any of your many comments to FCC?

>>> I haven't mentioned that in the last few years because there's too
>>> much ignorance of both theory and regulations on the part of those
>>> self-righteous PCTA.

>> I don't think so. You've never spared the verbiage here.

>>>>Note that Len never says what he wants something to be, only what it
>>>>should not
>>>>be. Except for his never-retracted demand that FCC enact an age
>>>>requirement of 14 years for any class of ham license.

>>> You forgot to add "...and therefore Len should be barred forever from
>>> saying anything about anybody under penalty of law!" [do not remove
>>> that tag]

>> No, I didn't forget to add anything, Len. I don't want to silence anyone,
>> nor deny anyone's free speech rights.
>
> I don't mind Lenover21's posting here at all.

Some do. But 'minding' someone's posting doesn't mean anyone wants it suppressed.
>
>Sometimes maybe people can mistake disagreement with suppression.
>
That's what Len seems to think. He seems to think that disagreeing with him is the same as telling him to shut up. Worse, he *really* gets ticked when someone points out an error in his information or logic. Like the whole flap about

Fessenden using voice radio in 1900...

>> I've never told anyone online to shut up.
>>
>> You have.

>>>>"Do as Len says, not as Len does"

>>>>>>>> Not conducive to a hobby activity. More conducive to a
>>>>>>>> dictatorship.
>>>>
>>>>Like telling people to shut up...
>>>
>>> "Shut up, just take the damn test!" (from others to me...)
>
>> Who wrote that to you, Len? When did they do it?
>
>I never saw that! I do recall a post where someone said something about
>Lenover21 taking a test, but don't recall any of what is in qoutes.
>
Back on January 19, 2000, Len (as Lenof21) wrote that he was "going for Extra right out of the box". He didn't. Almost five years now and he's not even tried the Tech written.

Of course an amateur radio license isn't a prerequisite to posting here. However, it *does* help with someone's credibility among radio amateurs.

>> Did Dave Heil, K8MN, ever write that to you?

I cannot recall K8MN ever telling anyone to shut up.

In fact, the exact phrase Len used was:

LHA: "Shut the hell up, you little USMC feldwebel"

USMC does not refer to the Marine Corps. "Feldwebel" is German for corporal, the rank held by a certain mid-20th-century dictator when he was in the German army in WW1.

I don't recall Len using any smileys with that, either.

>> Len seems to think that if one person tells him to "shut up", it somehow
>> justifies him telling someone else to "shut up".

>My folks taught me better.

He missed that lesson.

>> That's faulty logic on Len's part.

>I say, "Speak up Lenover21!" Don't allow people to squelch you!

Len doesn't need any encouragement to speak up ;-)

"Owned" and "run by" are NOT the same, Your Lameness.

No Amateur Radio = No MARS.

>Please tell me about third party agreements in MARS.

YOU tell ME what 3rd Party agreements have to do with any of this...?!?!

No, I've not.

And it will be a very cold day in the Devil's Parlor before a wimp like
you can "dismiss" ANYone ! ! !

Deposit another quarter and play again.

You say I "lied", but can't say what about.

I say YOU have lied and the proof is in your lack of evidence to the
contrary.

Your Putz factor is rising, Brain.

Steve, K4YZ

Indeed. Lardass Lloyd has been trying for over 10 years to upgrade and
get on HF and failed every time. Baxter is doing nothing but using ham
radio as a forum, since he couldn't get on commercial or shortwave
broadcast stations.

Yet in the retest letter, no reason was given for it.....fatass
Davies!
Tell us why in over 10 years all you can manage is no code Technician,
(the beginner, training wheel license) while Wiseman passed his retest
and even upgraded.

Upchuckie is all upset since even Baxter rejected his homosexual
advances, so he's trying with Wiseman, and getting the same result,
rejection.

Poor Chickenshit, he had to go to an online dictionary to look up
"coccyx" to use the word in a sentence. He was so dissappointed that
it had nothing to do with his favorite snack that has a similar name,
but lower on one's body.

OK, lemme see.

The USAF MARS Director is a DoD employee.

The USN/MC MARS Director is a DoD employee.

The USA MARS Director is a DoD employee.

Gosh, I wonder who's running MARS?

> No Amateur Radio = No MARS.
>

>>>Amateur Radio<<< has third party agreements.

"MARS >>>IS<<< Amateur Radio

... MARS has third party agreements.

So what are they?

You have.

MARS is not Amateur Radio.

I've owned three CAD plotters. Two were early-mid '90s pen plotters
and both were abominations I never want to have to deal with again. My
current plotter is an HP D-size Windoze color inkjet machine which is
very nice. All of 'em are/were sheet and/or roll fed and can't be used
to draw on flat surfaces. You're talking about using a flatbed pen
plotter. I guess there are some of those still out there but I don't
want anything to do with 'em for any purpose much less just to crank
out a few PCBs.

> There are also various techniques where you print a positive (?) onto a

They advertise all over the electronics trade publications and on the
Web. "It just ain't the same as real hombrewing." . .

Not my problem, those are your problems, I don't reinvent wheels, I do
the knob, you do the rest.

> This is one of the trends that makes homebrewing unattractive.

Agreed and trying to use SMT devices to homebrew compact complex
equipment really drives a stake in it.

> In the ancient times, you mounted the parts on a wooden base, then wired it up.

Probably but it depends on whether yer talking Collins quality or
rubber-band quality mechanicals.

> >Right on the money. As if Sweetums ever sank dime one of his own wad

Yeah, I guess we had to have somebody "over there" reading the
repeater meters and locked in mortal combat with all those kamikaze
geishas in the joints in Tokyo. While I worked my way thru E school
back here on the home front. On my own dime.

> >'Way up the band . . .
>
> How far up does the contest go? How about 7.070?

Bunch of variables are involved in this sticky wicket. But in general
at high noon a QRP ragchew on 7.020 should be no sweat. But when the
east coast big guns swing their monster yagis at EU to open the band
in the afternoon you better be above 7.050 and the "MUF" goes higher
from there as the clock ticks. MUF in this case being the *minimum*
usable freq for non-contesters.

But the facts contradict what you've stated. The scenario is much like
my having provided you urls desribing synthesizer phase noise and
spurs. The facts disprove what you've told us here. You still think
the term "phase noise" became a buzz word after cellular phones were
introduced.

Electro-politically incorrect to you, I suppose...
>
> >I find that most of the "modern ready-built" radio sets are very
> >unattractive.
>
> ...just like all the other radio amateurs? :-)

I find some other radio amateurs unattractive too. Most I find to be
nice people.
>
> Why are the designer-manufacturers continuing (after years of doing
> so) to design such "unattractive" exteriors?

One reason is that it's cheaper for them to do so. Another is that, as
in fashion, conventional marketing wisdom says that things have to

change in order to sell more product.

> Is it all a conspiracy
> against the superior esthetic sense of Jimmie?

You can't be talking about me, because I don't claim any "superior
esthetic sense".

What I do have is "independent thought" about what's attractive and
not attractive. I find that most of the "modern ready-built" radio
sets are very
unattractive. If that's unacceptable to you, tough.
>
> >Cluttered front panels, poor color choices, knobs and displays way too small
> >and too close together, etc., etc. So I purposely avoid such design in my
> >projects. If the set is a little bigger because of it - so what?
>
> Kluges are still kluges. :-)

Back to talking about clothing again?

> Decals for radio markings have been around for a half century...

So what? I don't think the use of decals would make the Type 7
attractive to you.

> are
> clearer to read that scribbled felt-tip marker pen markings.

There are no such markings on the Type 7.

> But, if
> those are "beauty" to you, feel free to enjoy it.

I don't need your permission, Len.

> Try NOT to impose
> your "standards of beauty" (radio-wise) on others.

I don't. It is *you* who try to impose your standards of
"attractiveness" on others.

Yet we are yet to see any examples of *your* homebrew HF radio
projects, made in your own shop with only your own resources.

DOS tip, Len: AOL gives you a free home page with each screen name.
You can have up to seven! Plus they provide easy-to-use software to
help you set them up. Even I managed to get two of them done in a
short time. (Yes, there's another...)

So *show us* what *you* could do in the home workshop, using only your
own resources.

--

About the Type 7:

Had I used "decals" on the Type 7, you'd complain that they were
glossy and hard to read, plus easy to rub or wash off.

Had I used tape labels, you'd complain that they looked "primitive"

Had I used engraved nameplates, you'd complain that they looked old
and like an afterthought.

Had I silkscreened the front panel, you'd complain that it wasn't
engraved.

Had I engraved the front panel, you'd complain about the color choice.

Or similar stuff.

It seems that the real issue is that it bugs Len no end that someone
he considers an inferior (me) can do something he can't. Not just
building a rig, but being able to use it on the air. Not just from a
license/legal perspective, but from a practical operating skills
perspective.

> >>We forget Lennie's only reason for being a "radio

I had no idea what an FCC was, kids do goofy stuff like that and I did
more than my share. But I did get on the air under my own steam with
nothing more than guidance from an article in an old book and with no
help from anybody. A Riley of those days woulda enjoyed it then he
woulda "explained a few things". But Mom got there before he did and

she didn't "explain" NOTHIN' . . .

> So...was all this "phase noise" invisible way back in the
> 1990 time? It didn't exist?

That you didn't read the published material does not mean that the
material did not exist. The synthesizer phase noise issue was debated
well before 1990.

> It only came up when a frequency
> synthesizer was incorporated? :-)

Synthesizers were in wide use prior to 1990. The phase noise issue
became important as synthesizer circuits became common in transceivers.
I'll invite to read up on the subject. I've provided several urls.
There are numerous other sources of information on the subject. Why not
avail yourself of some of them?

> >R70s were made 1982-84 (approximately), so the design is at least 23

While I doubt that the receiver functions as advertised, I have no
trouble believing that it works as designed.

> I've got one. You don't. :-)

I'm sure it is quite a nice piece of equipment for the casual SWL. I'm
happy for you.

> The only thing I "recycled" was some paper to get one in working
> order. :-)

I recall you mentioning that. "Cash" wasn't it? Use of a credit card
would have muddied the waters.

> "Phase noise" wasn't a big buzzword then. It has a three-loop
> PLL in it plus a microcontroller. Sensitivity is still good and
> comparable with any contemporary HF receiver.

"Phase noise" wasn't a big buzz word in the Icom engineering and sales
bunch. Elsewhere, the use of the term was already common.

> I've yet to get close to the concept of sitting around a shack
> making as many contacts as possible in a given time as any
> "sport."

Skill and endurance are certainly big factors in winning any amateur
radio contest.

> Neither is that activity "pioneering the ariwaves" nor
> any sort of "training for emergencies" to reasonable-thinking
> human beans.

Did you ask any? No claims for contests as pioneering the "ariwaves"
have been made. Any on-air activity which requires speedy, accurate
operation is good training for emergency situations.

> Like chess or checkers or board games, radio contesting is
> a GAME.

There are some similarities. A good strategy, playing within the rules
and some luck are involved. No board games that I'm aware of require
putting up big antennas at height, putting together a radio station or
planning sleep breaks.

> It is FAR from an ATHLETIC sport.

Not if done correctly.

> "live and let live."

Sure it is, Leonard. You have the same opportunity to take and pass such an exam as I did. The REGULATION doesn't single you out. I don't know why the term "AMATEUR license" bothers you. That's what the exam is for--an "AMATEUR license" to operate an AMATEUR radio station on HF.

Be that as it may, you didn't bother to answer the question about you denigrating what some radio amateurs do for fun. Why would it bother you that someone participates in a contest? I mean, it isn't as if you are actually involved in amateur radio.

Of course they are not. It is all canned. But it really IS code practice,
this loon on 7030 is doing nothing but sending Bible gibberish at the same
speed.....24/7.

So you compare this to K1MAN and W1AW next, right?

Hint: It must appear that way to a fellow who spent his time reading
only about cellular telephony. The term "phase noise" was commonly
discussed "back then" as regards synthesized HF transceivers. Many of
we grownups where discussing it two decades back.

> There were contests a decade ago and farther back. Those that
> don't have much to communicate can always have "contests" to
> prove they are "somebody" through point scores. :-)

That you see no value in competitive endeavers doesn't really effect
those of us who do. How are you effected by amateur radio contests?

> Especially good point scores through the efforts of "reducing
> phase noise." :-)

I guess it is the little smiley which really makes you sound like a person uninformed on the issue. How is it possible for you to have been a PROFESSIONAL in radio, a PROFESSIONAL in the design of synthesizer circuits and to have been unaware of the problem of phase noise with such circuits?

> >All that's needed is for
> >him to obtain a valid amateur radio license, and an amateur radio station.
>
> Why are you so focussed on all MUST have a ham license to
> discuss anything in here?

You've discussed. You just have no experience in amateur radio, no stake in amateur radio and no credibility in amateur radio. You needn't have an amateur radio license at all. Does that clear things up for you?

> More tsk. My choice of residence location is NOT primarily
> motivated by any slavering desire to erect a radio station of
> any kind.

Great. It looks like you've got your wish. My Cincinnati home was somewhat motivated by a desire for a good radio location. My present home was selected in large part by a desire for a great radio location with few neighbors. In addition, I have dark skies, a view to die for and quiet which city and suburban dwellers don't even notice they don't have.

> Residences are HOMES, a place of living.

Residences mean many things to many owners. My living here includes amateur radio, guitars, computers, astronomy, reading, writing, photography, videography. I have neighbors who do none of those things. Their residences are for what they enjoy doing in their manner of living.

> I've lived ON a huge radio station long ago, one much bigger than

> rest of my life...but important back then. If you want to live ON
> or IN a radio station, feel free to apply for a broadcasting license
> and make sure the local ordinances allow living on business
> premises.

I currently live in the midst of a goodly sized radio station. I didn't need to apply for a broadcasting license. I have no business on the site and it wouldn't matter anyway. This county has very few restrictions or zoning laws.

> For a small part of my life the radio station complex was built
> ON an old airfield. Not even the old Press Wireless station
> in Palos Verdes, CA, (the one bought by a ham) was that large.

...but one man, Don Wallace W6AM bought that 25 acre Press Wireless site, complete with rhombics and the large building which formerly housed the station. He used it primarily for DXing and contests.

> >End result is "can't fix it because the

There are, in fact, numerous sources for such parts.

> Last vacuum tube receiver I DESIGNED and built was in 1964-1965.
>
> HF. Wasn't for listening to on-off keyed radiotelegraphy! [horrors!]
>
> Terrible thing! NOT A LICENSED AMATEUR DESIGNING AND
> BUILDING AN HF RADIO! Call out the radio police!

No license was or is required to build a receiver. In fact, no license
was or is required to build an amateur radio transmitter. You'll need
one if you want to hook it to an antenna and transmit though.

> It didn't use any "recycled parts."

A pity that you had nothing useable on hand.

Woo-woo! Nice piece. What are they going for these days?

Ya hafta resist or ya go nuts. I've sworn to myself not to clutter
this place up with any boat anchors. None. Zero tolerance for boat
anchors around here. But then I spot the R4B and the 75S-3B again and
remember all the goodies I worked and all the fun I had with them and
start to crumble. I need a Boat Anchors Anonymous chapter to help me
deal with it but alas, no such thing . . .

"Talking snarly"? I didn't note any snarly at all. You may well have
succeeded in the career goals you set for yourself. Dandy. That really
has nothing to do with amateur radio. You've certainly failed to act on
your several decades of declared interest in amateur radio. You've not
even *attempted* to obtain the most basic of licenses, much less that
"Extra right out of the box". Do you see this statement of facts as
"talking snarly"?

He can do that or anything else permitted by an amateur radio license.
You simply aren't involved.

Well, there's the ebay price and there's the small hamfest price.
This one was in pretty good shape and a firm 500 clams.

> Ya hafta resist or ya go nuts. I've sworn to myself not to clutter

>
> Yeah, how stupid was that?

At least you knew better than to disrupt a bunch of fathers listening to
a football game or a boxing match. That could have gotten a whole lot
more confrontational. Zed Zainoon W8ENJ, a Lebanese-American screwed up
the TV reception at a Moundsville bar close to his home back in the
early '50s with his Collins KW-1 AM KW. There was very nearly a
lynching.

Nope. I just adjusting the gap on the doorbell buzzer for maximum noise
on the radio.

Lennie's "success" in "professional radio" was getting by on the works
of others and not gettting sued for it. More a successful con-man than
"professional in radio"

>> YOU have REJECTED simple things like a digitized license
>> repro in the past.

I didn't ask for it. I had already said I'd take your word that you had one.

But you sent me*several* unsolicited emails with unknown attachments of large
size. (Ever hear of compressing a file before sending?).

How was I to know what they were? I found out later that one attachement was a
picture that contained male nudity. Not my cup of tea, so to speak.

>> You would be expected to reject anything I
>> present...as "credentials" or whatever real proof there is...and
>> there is a lot of it.

It's real simple, Len:

Pick an HF radio project that you did in your home workshop as a "hobby" activity. Not something for work, or something you did as part of a group, but something you dreamed up and built yourself, just for the fun of it. Not some accessory, either - a complete receiver, transmitter or transceiver.

Put a picture and a short description on your AOL homepage, just like I did. We don't need megabytes or a long diatribe. Just a .jpg and a short description.

My project is out there for all to see. Where's yours? Or are you too afraid of what others will say?

--

>Rank, title and status?

>you that someone participates in a contest? I mean, it isn't as if you
>are actually involved in amateur radio.

Exactly.

And guess what: If the code test goes away, contesting in amateur radio will continue. Some contesters are actually *for* doing away with the code test on the grounds that it will allegedly get more hams on HF, thereby raising their scores by having more folks to work and making some sections/countries/zones less rare.

Yeah, I know, but depending on yer timeframe, space, tools and tolerance for smells and such it may be cheaper/easier/quicker to farm it out.

There are those who can do SMT, of course. But the stuff requires yet another
level of tooling and skills.

I've done it...

Point is, it was quick, inexpensive, easy and forgiving of errors

>> Then came metal chassis and panels. Do the metal layout, the metal work,

>> calibrated before the other guy has his PC boards done.
>
>Probably but it depends on whether yer talking Collins quality or
>rubber-band quality mechanicals.

I figured that one out about 35 years ago:

WW2 surplus had lots of good parts. Among the very best are the integral dial/reduction drives/capacitors found in ARC-5 rx and tx units, and the LM/BC-221 freqmeters. All you need are adapters for the shaft and a new dial.

Swords into plowshares. I never bothered with Millen and National drives for serious stuff.

The Type 7 uses a cap from a hangar-queen BC-221. 100:1 nobacklash drive, thermally compensated, extremely rugged cast frame, etc. Better than almost anything in typical ham gear. Cost maybe $5 for the whole chassis, which has lots other good parts.

To get more dial spread, I made a dial drum from a piece of 6" plexiglass tubing. Recycled, of course. Dial light/reflector assembly is inside the drum and shines through the plexiglass. You view the lighted dial through a window in the front panel.

To calibrate, I wound a piece of paper on the drum and marked it with the aid of my working BC-221. Then the raw paper was redrawn via CADD, the result inkjet printed on a scrap of Mylar drawing stock, and the whole thing put on the dial drum. Works and I can read it in any light, with or without glasses.

Been there, done that - halfway, anyhow. One big reason I went to Penn was the nice Benjamin Franklin scholarship they gave me. Covered more than half of the cost per year. Also NDSL loans and a near-full-time job year 'round.

Junior year was a trip - 5 engineering courses and working 35-39 hours/week. No car, either. Thank you SEPTA....

All I do is email the problem to you and wait for the results. Then
Microstation does a format conversion....

I didn't say I could solve the problem, just that I could get the results!

I'll buy the RB without a bet.

It is.

Anyway, I had to install the antenna tuner on my TS-690S, the SSB and
CW filters, and the voice module.

>
> All of the civilians who happen to have Amateur Radio licenses,

DoD runs MARS.

For DoD purposes, not Amateur purposes.

On MARS frequencies, not on Amateur frequencies.

With DoD regulations, not Amateur regulations.

Riley has nothing to do with it.

that
> without, would not be allowed to participate in the program.

If the military ran out of amateur radio volunteers, they would open
the doors to another volunteer group. MARS would continue.

Or it would fold. There were strong rumors several years ago that it
would fold, even though there were plenty of Amateur volunteers.

I'm tired of trying to set the record straight, but here I go again.

I was playing Hop Sing, the cook on Bonanza. I think Len was playing
Fuji, the POW on Seven Hostile Actions, err, I mean McHale's Navy.
But you'll have to confirm that with Len.

> >
> >But you need to.

>
> I need to lie?

I don't know if you need to lie or not, but you do a lot of it.

What you need is to understand that you do lie.

> Why?

So you can heal yourself.

> Then somone like me could jump in here and make a fool out of me like I do
> you, Brain.

Like you do yourself every time you lie. Your lies are pretty
transparent. Easily observed even by the uninitiated.

> >Admitting your problem is the first step.
>
> Admitting that I don't tolerate liars is a problem? Since when?

Self-hatred is destructive behavior. Learn what is at the heart of
your problem.

> >> >See how out of touch with reality you are?
> >>
> >> Talking to yourself. Now THAT's abreak from reality, Brain.
> >
> >Good grief! There's no hope for you, unless you seek professional help.
>
> You tell me I NEED to lie and that I need to admit that not tolerating
> liars is a problem, yet you think >>I<< need help...?!?!

Yes, yes. See how circular your problem is? You lie, but you hate
liars. So you hate yourself.

Then you accuse others of lying, trying to project your self-hatred on
them.

Best of luck in seeing it, as the nuts almost never get it.

> Do you understand why I find it necessary to ask someone to be wary of
> you, Brain?
>
> Steve, K4YZ

I'm wary of you. I've asked you not to send me private emails, but
you do anyway.

You have publically insinuated some pretty low class stuff. I want no
part of it, so keep your distance.

Some observations on the SG 2020....

- It's a nice little rugged 20W box. Continuous HF coverage, which may be a big plus for those who want to do freeband or cb :-).

- It's lacking in receiver performance in a number of ways. Some of the deficiencies are made up for by *audio* DSP, at extra cost. But it's direct-conversion, so things like aftermarket filters don't exist. Unwanted-sideband suppression is not up to superhet standards.

- BDR and 3rd order 2 tone IMD are way below the competition, and are *noise limited* due to the synthesizer.

- It's not a bargain. Costs more than many ham xcvrs that perform better. The basic unit is not too expensive but the add-ons are.

- Almost no internal accessories. (ATU, battery, filters). No noise-blanker that I could find on the website.

- Heavy, by comparison to the competition

In almost every performance spcification, there are better performing rigs for the same or less money. About the only place the SG 2020 really shines is that it's in a rugged case, and puts out up to 20 W.

>> Are you in the tRoll opinion against the "shack on the belt crowd?"
>
>Nope.
>
>> "Minimalist?" It does SSB very well. It includes a lot of self-
>> check features as standard.
>
>I can check my own radios Sweetums, but you better stick with SGC.

It's not alone in the self-check function. How much test equipment is needed to do a complete alignment?

>> Maybe you want a "top of the line contester" transceiver that not
>> only has all the super selectivity and sensitivity to leap tall pileups
>> but also keeps the logs and prints out QSLs?
>
>Right on again Sweetums, you're finally starting to get it.

Take a spin over to the Elecraft website and see the mobile computer a ham put together in the EC2 enclosure. ITX motherboard, tiny LCD display. Big computer performance. Whole thing runs on 12V.
>
>> All on battery power?
>> :-)
>
>Whatta a great battery-powered rig: Draws over a half amp while simply
>listening to a dummy load.

That's more than double the competition's requirement. Some smaller ultraportables draw about a tenth of that on receive!

Plus SG2020 has no provision for internal battery. There's an external pack so you can run it on D cells.

Bring a lot of D cells.

You don't wanna think about what it draws while transmitting.

Perhaps some folks' idea of fun is hauling all those batteries around. Good exercise ;-)

But you missed the big question: Does Len own an SG 2020? How about accessories?

Or does he do like my old highschool friend - "borrow" others' setups, rather than have his own?

>Well no, fact is Sweetums that I have a very current tech ham radio
>catapult, Miccolis and I used it to launch some Field Day antennas
>just a few months ago. He has one of a different design which also
>works well.

You have the deluxe model, I have the minimalist. Seen service at several locations.

IIRC, mine has been used on at least 3 Field Days and also to put up permanent antennas at ham QTHs. Yours is even better-traveled.

Where did I say that?

Anyone can discuss here. I have seen no postings where somebody has told Len to
"shut up", even though he has told others to "shut the hell up".

Credibility is another issue.
>
>You've discussed. You just have no experience in amateur radio, no
>stake in amateur radio and no credibility in amateur radio. You needn't
>have an amateur radio license at all. Does that clear things up for you?

I don't think Len understands.

>> More tsk. My choice of residence location is NOT primarily
>> motivated by any slavering desire to erect a radio station of
>> any kind.

>Great. It looks like you've got your wish.

To each his own. But from descriptions and mapquest, it appears that Len's
choice was a particularly poor one for HF radio operations.

>My Cincinnati home was
>somewhat motivated by a desire for a good radio location. My present
>home was selected in large part by a desire for a great radio location
>with few neighbors. In addition, I have dark skies, a view to die for
>and quiet which city and suburban dwellers don't even notice they don't

Some of us notice.
>
>> Residences are HOMES, a place of living.

Avocations are part of living. Amateur radio is part of my life, and part of
the definition of "home" to me. Others may differ, of course.
>
>Residences mean many things to many owners. My living here includes
>amateur radio, guitars, computers, astronomy, reading, writing,
>photography, videography. I have neighbors who do none of those things.
>Their residences are for what they enjoy doing in their manner of
>living.

What a concept!
>
>> I've lived ON a huge radio station long ago, one much bigger than
>> is possible in any residential area.

But it wasn't Len's radio station. He didn't own it, build it, or pay for it.
He and over 700 others ran it. Was their *job*.

>> Not my idea of living for the
>> rest of my life...but important back then.

Yes, it was.

Amateur radio stations are important, too.

>> If you want to live ON
>> or IN a radio station, feel free to apply for a broadcasting license
>> and make sure the local ordinances allow living on business
>> premises.

It sounds like what Len is saying is that we hams should not be allowed to have
our stations in our homes. He has made similar remarks before. I think if it
were up to Len, most of us hams would be forced off the air by a variety of
forces.

How does Len feel about anti-antenna ordinances?
>
>I currently live in the midst of a goodly sized radio station. I didn't
>need to apply for a broadcasting license. I have no business on the

>>
>> BWAHAHAHAHAHAHHAHAHAHA!!!!

It's true.

>> Riiiiight.

Yes, it is.

>> Try to find a replacement for an R-390 power transformer...

Easy. Get one from a hangar queen. Lots of them out there. Not inexpensive but
anyone who deals with '390s knows that.

>> or anything inside that PTO...even in 1980... :-)

Wrong again, Len.

The modular construction of the R-390A permits a lot of repair to be done by
module-swapping. PTOs for those receivers are not hard to find, and most
versions can be rebuilt and recalibrated in the typical basement workshop with
a few tools and parts.

>There are, in fact, numerous sources for such parts.

Yep. Also lots of information and even "professional quality" instruction
videos on how to restore them. In fact, the internet has made them *more*
available. Check out

http://www.r390A.com

for one such source, and links to many others.

btw, the R390A was produced by a number of manufacturers from 1954 to at least 1984. Although many were destroyed (because the govt.either didn't know or didn't care about what they were worth), many survive as either working receivers or parts sources.

>> Last vacuum tube receiver I DESIGNED and built was in 1964-1965.

Did you do that at work or as a "hobby" project?

>> HF. Wasn't for listening to on-off keyed radiotelegraphy! [horrors!]

Description? Pictures? Performance?

>> Terrible thing! NOT A LICENSED AMATEUR DESIGNING AND
>> BUILDING AN HF RADIO! Call out the radio police!

And how many HF receivers have you designed and built as a "hobby" in the intervening ~40 years?
>
>No license was or is required to build a receiver. In fact, no license
>was or is required to build an amateur radio transmitter. You'll need
>one if you want to hook it to an antenna and transmit though.

You also need one in order to sell a transmitter.

>> It didn't use any "recycled parts."
>
>A pity that you had nothing useable on hand.
>
When I asked Len for help in designing an HF station, all he could offer was to point me to the Digi-Key catalog. That explained a lot, actually, because it told me that Len doesn't really know how to do home design and construction of radios. Nor how to be creative in the use of available components rather than just what's in the catalogs.

That's not a put-down, just a fact. While Len talks a lot of theory, and what he did as a "professional" way back when, home construction of HF receivers, transmitters and transceivers just isn't his thing. Look at his articles in 'ham radio' - none of them are radio construction articles.

>>> discuss anything in here?
>
>Where did I say that?

Lennie's typo notwithstanding, you didn't.

Just one of Lennie's SOP's (Situationally Obnoxious Posting). Keeps
reciting the same unfounded, baseless rant over and over again.

What Lennie HAS been told is that perhaps if he got an Amateur Radio
license and PARTICIPATED in Amateur Radio, he would actually understand it and
be able to discuss it from an INFORMED position.

>Anyone can discuss here. I have seen no postings where somebody has told Len
>to
>"shut up", even though he has told others to "shut the hell up".

It's that "anger" thing he keeps accusing me and others of. "Shut the
hell up" is a very angry, antagonistic way of trying to brow-beat another.

>Credibility is another issue.

Again...perhasp if he could actually discuss matters from an informed,
experienced positon...As it stands, he has zero-point-zero minutes of practical
Amateur Radio experience.

>>You've discussed. You just have no experience in amateur radio, no
>>stake in amateur radio and no credibility in amateur radio. You needn't
>>have an amateur radio license at all. Does that clear things up for you?
>
>I don't think Len understands.

How can he?

He and Brain have thier respective heads up each others backsides so far
that neither can see a thing, and what they can hear is muffled and distorted.

>>> More tsk. My choice of residence location is NOT primarily
>>> motivated by any slavering desire to erect a radio station of
>>> any kind.
>
>>Great. It looks like you've got your wish.

Ahhhhhh! But he CAN report to us on the VHF navaids from LAX! Oh joy!

Of course any of us with more than a month or two's experience in Amateur Radio can attest to the fact that respectable signals can be radiated from and received by antennas that no one can see.

Having once resided in SoCal antenna controlled neighborhoods myself I can attest to the fact that a wire around the eaves and fed by a decent roller tuner and worked against a good ground can work pretty well.

>To each his own. But from descriptions and mapquest, it appears that Len's
>choice was a particularly poor one for HF radio operations.
>
>>My Cincinnati home was
>>somewhat motivated by a desire for a good radio location. My present
>>home was selected in large part by a desire for a great radio location
>>with few neighbors. In addition, I have dark skies, a view to die for
>>and quiet which city and suburban dwellers don't even notice they don't
>>have.
>
>Some of us notice.

>>> Last vacuum tube receiver I DESIGNED and built was in 1964-1965.
>
>Did you do that at work or as a "hobby" project?

>>> HF. Wasn't for listening to on-off keyed radiotelegraphy! [horrors!]
>
>Description? Pictures? Performance?

None.

Just like his Padawamn Learner's T5 logs.

>>> Terrible thing! NOT A LICENSED AMATEUR DESIGNING AND
>>> BUILDING AN HF RADIO! Call out the radio police!
>
>And how many HF receivers have you designed and built as a "hobby" in the
>intervening ~40 years?

None. Last time he dared to venture a discussion on any kind of direct participation in radio as a hobby, he had a(n) (alleged) ricebox lineup including an ICOM R-70.

>When I asked Len for help in designing an HF station, all he could offer was
>to

>point me to the Digi-Key catalog. That explained a lot, actually, because it
>told me that Len doesn't really know how to do home design and construction
>of
>radios. Nor how to be creative in the use of available components rather than
>just what's in the catalogs.
>
>That's not a put-down, just a fact. While Len talks a lot of theory, and what
>he did as a "professional" way back when, home construction of HF receivers,
>transmitters and transceivers just isn't his thing. Look at his articles in
>'ham radio' - none of them are radio construction articles.

Lennie's "contribution" to radio was getting coffee for and staying out of
the way of the REAL radio professionals as they did REAL engineering and design
work.

Such negativism. Besides, they're not interested in 20W radios.

Consider wx intercept, rtty wx, and hf fax.

259. Totally OT: The Right Stuff, Space Milestones and a Farewell

Message-ID: <c2356669.0410051323.f867f7f@posting.google.com>
Source record: 98207

October 4, 1957: USSR launches Sputnik 1, first artificial satellite

October 4, 2004: SpaceShipOne exceeds 100 km altitude for second time, wins prize. Also breaks previous piloted-aircraft-lifted-by-another-aircraft-but-not-launched-by-a-rocket-booster altitude record set by X-15 in the 1960s.

October 5, 2005: Gordon Cooper passes away. One of the 7 Mercury astronauts; John Glenn, Scott Carpenter and Wally Schirra are left now.

"Gordo" Cooper was the last American (and possibly the last human) to go into space alone. He set a new record for length-of-mission with Faith 7. By the end of that flight, the automatic guidance systems had failed. Cooper had to line up the capsule in all three axes by eye, using the hand controller, then fire the retro-rockets at the correct moment. The on-board clock had become unreliable so he had to depend on a countdown by radio from capcom John Glenn.

In his own words: "Well....things are beginning to stack up a little..."

Gordo hit the mark so exactly that Faith 7 landed closer to the pickup carrier than any other Mercury flight.

Godspeed, Gordon Cooper.

Hmmmm? So it's OK for one and not the other?

> But it really IS code practice,

Perhaps. But perhaps it's just advertising for QST. You see, W1AW
sends snippets of QST articles as a tease. If you want the rest of
the article, you get to go purchase QST.

Is K1MAN selling bibles?

> this loon on 7030 is doing nothing but sending Bible gibberish at the same

Jim, that is a pervasive theme in RRAP, the "requirement" of having an
amateur radio license to discuss things -radio- related.

If you missed it, then you must must be necrotic. If you support it,
then you do so by your silence, as you do so many other topics on
RRAP. Schindler.

So you're either for it or agin it. Support Kelly, Heil, and Robeson?

You decide.

Time to get off of the fence.

Best of Luck.

Why is Jim in the dark on this one?

The other three horsemen of the apocolypse support it.

He supports it by his silence. Schindler.

>
> Like amongst hams.

Like with the first synthesized circuit radios???

And of course, those very first synthisized circuit radios were ham
radios!

Hi, hi!

> >> I've yet to get close to the concept of sitting around a shack
> >> making as many contacts as possible in a given time as any
> >> "sport."
>
> It's called "competition".

Nope, it's called contesting.

Best of Luck.

> >Skill and endurance are certainly big factors in winning any amateur
> >radio contest.

Somebody's half-way awake. Missed the boat ont he sport concept.

Where money is no object. I thought you guys were focused on
third-worlders who had to self-manufacture CW only circuits?
Wherethere is no money. Which is it?

> >> Like chess or checkers or board games, radio contesting is
> >> a GAME.
>
> So are all sports. Like the Olympic GAMES...

Messing with Steve is a game. Emergency comms is no game.

MARS is NOT Amateur Radio.

> >There are some similarities. A good strategy, playing within the rules

Rules

RULES???

Like copying the W1AW message the day before? Hello Kelly???

Hi, hi! These guys obey no rules.

They are the elite! Rules are for the other hams.

> >and some luck are involved. No board games that I'm aware of require
> >putting up big antennas at height, putting together a radio station or
> >planning sleep breaks.

Why must you confine your "game" to board games???

Are road rally's played on a board?

> Think car racing. Bicycle racing (Lance Armstrong wasn't riding a three-speed
> with baloon tires)

Allow Bill Sohl to speak of road rally's. If you dare.

And all PCTA's are actually against doing away with the code test on
the ground that it will diminish their status as "REAL Hams."

73 de bb

Literal interpretation not permissible.

I.E., morse code exams at 5 wpm vice anything else (Farnsworth) at
12-15wpm.

I.E., monetary compensation for making a transmission (repeater
owners).

Oh, well. So much for literalisms.

> By any normal standards the individual punching the
> buttons, doing the tuning and doing the communicating or in any

>
> Windbags.

That's all quite easy to say if that person has amateur operating
priveleges. Plenty of Windbags in amatuer radio. One is attributed
with >high status< if they have passed a Morse Code exam. Woo Hoo!

The person without operating priveleges may yet own the best ideas and
concepts wrt HF radio. You choose to deny him or her the opportunity
advance amateur radio. Too bad for all of us because of >your<
inexcusable prejudice.

Meanwhile, you bootlegged as a kid. But its all "good." You're an
Extra now.

> Jim, that is a pervasive theme in RRAP, the "requirement" of having an
> amateur radio license to discuss things -radio- related.

One of your continuing problems is that of telling the difference between what you think has been written and what has actually been written.
Firstly, this isn't a "radio-related" newsgroup. It is an "amateur radio-related" newsgroup. Len discusses and discusses. Mostly, his windbag routine consists of insulting radio amateurs and the ARRL. Sometimes he includes personal historical data having nothing to do with amateur radio. Very little of what he posts has a thing to do with any current or past amateur radio policy matter.

> If you missed it, then you must must be necrotic. If you support it,
> then you do so by your silence, as you do so many other topics on
> RRAP. Schindler.

I note your silence on gay marriage. By your silence, you must support it. You've been awfully silent on the matter of Scott Pederson. It could be said that you must support him.

> So you're either for it or agin it. Support Kelly, Heil, and Robeson?

...or he couldn't care less.

> Time to get off of the fence.

I'd strongly suggest that you do so--especially if you're sitting on top of one of the posts.

Without knowing just what A4s have been going for these days $500
seems to be reasonable if it's in decent shape.

Depends on what's flowing where. I have health and space problems and
was sinking in cubic yards upon cubic yards of up to 50 years worth of
CRAP and was almost under when I decided that I had to either take my
life back or commit hari-kari. So I spread almost all of my posessions
out on an empty 20 x 80 foot floor in the old textile mill I'd haunted
since I was a kid. I sorted thru the heap and picked a small pile to
save for myself. Then I invited family members and a few others to
trash pick the heap before I ordered the dumpster. Micollis got his
van load.

Then I went berserk and turned myself into a one-man front end loader
and up the hill to the landfill the 30 or 40 yard trash container
went. In retrospect I probably should have kept some stuff I
dumpstered but I'm not losing any sleep over it. I did my kids a
favor, they'll dumpster everything which is left anyway when I croak
so I've saved them some of that chore

. . like my Quaker school first grade teacher admonished "Know thyself Master Brian!". Yeah, I do know myself, I'm patterned, I'm a compulsive pack rat. That's why I gotta be a hardass and not go back to collecting nice old radios else I'll wind up right back where I was.

> It beats collecting Hummel figurines.

Don't even bring up Hummels David . . the ex is a Hummel freak who has a buddy who was the wife of a G.I. stationed in Germany back when the Hummel craze was barely getting off the ground. Net result being that the ex has some number of 25 gallon fibre barrels fulla the things which she bought with pocket change back then. Gotta be worth big bucks today. Many years later the property settlement was not pretty. She and her idiot lawyer got to nit picking my assets so just to be annoying I told de judge that I wanted to get into splitting up the collection of Hummels. Which she "conveniently" forgot to list as one of her assets of course. At which point my lawyer hissed in my ear, "If you intend to get serious about splitting up a collection of #%X&# Hummels go find another lawyer!".

Per a post of his around here a couple days ago he's trying to be contrite and explained that his antenna problem involves some sort of installation "restrictions". Maybe like CC&Rs or some such, he didn't say . . .

> "It's all about the chil'ren

Whatta weenie . .

Or like the guy across the street who bought a 40 inch flatsceen TV "for the chullins" but they're not allowed to use it.

> > > You actually disrupted the march around the breakfast table?
> >

After I finally got my Novice ticket Pop found out real quick what I was doing to his world so we agreed that I wouln't fire up the 80M ARC-5 on Friday nites while the "Gillette Calvacade of Sports" fights were on the boob tube. The problem I had with Mom ealier however did not involve an "agreement".

I am more certain of the honesty and reliability of the person from who I
obtained this information than I am of Lennie or you.

>> I have word that his "performance" was less than
>> expected on at least one assignment.
>
>State the assignment. State who's word.

When Lennie was in Warminster, PA...And the "who" is my secret.

>Whatever's left of your reputation is at stake.

What's left of MY reputation will still be standing long after you have
been laid to rest, Brain.

>Oh, nevermind. You're a habitual liar.

I am sure you wished it was true.

We'll discuss it at next Dayton...See you there, Brain!

>> > More a successful con-man than
>> >> "professional in radio"
>>
>> I am gald you agree.
>
>Wherever did you get that idea?

Why, through your SILENCE, Brain! You requoted the statement and didn't
comment on it. By your own "Rules of Engagement", failure to comment on
something means you condone it by virtue of that silence. You've expressed
those very sentiments in another thread within the last 12 hours.

Again, you provide us with yet another example of not being able to keep
your OWN stories straight, Brain.

>I hold my agreement in abayence. Exactly what are you gualled about?

I think you meant "gaulled".

We could start with your complete lack of character, your DOCUMENTED
pattern of lying and deceit, and we can wrap it up with your complete failure
to validate even ONE example of your self-proclaimed "superior operator"
status.

And that's just what we know of you from THIS forum. I shudder to think
what any deeper investigation might reveal.

>
>Was that W5AMY or KD6IJB? It's so hard to remember all of these
>wunnerful old timey ham calls. Steve's such a swell guy!

Well...we could start this off by saying you've not held anything down.

Had you READ Dave's comments on "CQ Magazine", you might have really
understood what he said and to whom. He said nothing of the like about "CQ"
being a "membership" organization. Nothing.

Instead you completely misquoted him. Of course intentional misquotes are the ONLY way either you or Lennie can perpetuate your silliness.

Then the comment about Brian Kelly wanting to "bend you over" on the air. What a hoot.

The objective was to give you an opportunity to prove even some of the smallest of your assertions, one being that you have enough smarts to generate some RF. Seems you can't even do that. You have lotsa claims of operating from distant places, portable callsigns, and operation from DX locales that lotsa guys would love to operate from, yet you can't come up with ONE QSL card or reference that validates any of it.

And then you oddly quoted my XYL's QRZ info and claimed I "dragged her into this discussion" after stating I'd rather find myself next to her than you.

I guess I hurt your feelings.

I find the really funny part is that she has 329 look-ups (per your own quote) to your (as of MY look this AM) 319.

Seems it doesn't take much to beat you at ANYthing, Brain...Even by my wife.

Sheeeesh.

(You may go ahead and start clicking on your QRZ site over and over and run it up if you'd care to...I am sure you'll have fun...)

You're a fool, Burke. A silly, pathetic fool.

>> Jim, that is a pervasive theme in RRAP, the "requirement" of having an
>> amateur radio license to discuss things -radio- related.

Where, when and how did *I* say that "all MUST have a ham license to discuss
anything in here?"

If it seems to some to be a "pervasive theme", that's due to the fact that Len
writes it over and over....

As I've said many times before, *anyone* with internet/usenet access can post
here. Credibility is a different issue - it has to be earned.
>
>One of your continuing problems is that of telling the difference
>between what you think has been written and what has actually been
>written.

"William" does seem to have that problem.

>Firstly, this isn't a "radio-related" newsgroup. It is an "amateur
>radio-related" newsgroup.

True.

>Len discusses and discusses.

Very true!

>Mostly, his
>windbag routine consists of insulting radio amateurs and the ARRL.

One caveat: That behavior is reserved for those who disagree with him, or point
out errors in his statements.

There's a one-paragraph profile of Len's behavior floating around...

>Sometimes he includes personal historical data having nothing to do with
>amateur radio. Very little of what he posts has a thing to do with any
>current or past amateur radio policy matter.

True and true again.

>> If you missed it, then you must must be necrotic.

Where, when and how did *I* say that "all MUST have a ham license to discuss
anything in here?"

If it seems to some to be a "pervasive theme", that's due to the fact that Len
writes it over and over....

As I've said many times before, *anyone* with internet/usenet access can post
here. Credibility is a different issue - it has to be earned.
>
>> If you support it,

>> then you do so by your silence, as you do so many other topics on
>> RRAP.

Not true! Faulty logic.

>> Schindler.

What significance does that name have to amateur radio policy?

Do you seek to flatter me by comparing me to one of the most heroic figures in
human history?
>
>I note your silence on gay marriage. By your silence, you must support
>it. You've been awfully silent on the matter of Scott Pederson. It
>could be said that you must support him.

>> So you're either for it or agin it.

It's not a binary issue.

>> Support Kelly, Heil, and Robeson?

On some things, yes. On others, no. Independent thought on my part.
>
>...or he couldn't care less.
>
>> Time to get off of the fence.

Is that an order? Or a demand?
>
>I'd strongly suggest that you do so--especially if you're sitting on top
>of one of the posts.

By his own logic, "William" must support Len's behavior here.

73 de Jim, N2EY

Thats not true. The Marshall County, WV, ARES members all hold
the prestigious Radio Endorsement on their CDLs. You know
full well that this highly sought after endorsement allows Marshall
County, WV ARES members to legally use ANY frequency in the
electromagnet spectrum! Woger, you are just jealous because
you do not have a CDL, much less the much respected Radio
Endorsement to same. Your DeVry correspondence courses are
not even accredited. Remember the way Stagger Lee proved you
wrong so many times on negative SWR, inverse proportional
trapazoidonal wave theory, and micro dynamic quantum wave
theory, and many many other topics that your DeVry instructors
weren't even qualified to teach?

Lloyd

Time and tools I have, the space is a question though. I was raised in
a machine shop, worked in refineries, chemical plants, textile mills
and had a darkroom. Odors are no biggie.

> >Agreed and trying to use SMT devices to homebrew compact complex
> >equipment really drives a stake in it.
>

> serious stuff.

Then you missed the boat. As you know I'm more than just a tad familiar with those old surplus drives. They were designed *seven decades* ago for use in high altitude high vibration combat environments. Usually on fixed freqs. None of which has anything to do with ham gear particularly today's ham gear. They're miserably slow tuning *kluges* by any realistic measure. I could build a complete DC rcvr in the space one of those clunkers sucks up and it would have a nice smooth tuning mechanism. Which is why you got the last of those I had. I am not going to be the Last Dinosaur, that's your yob.

Steam locomotives and gas lamps still work too. I'm waiting for you to announce that you're driving back and forth to the job in a 1937 Model 72 Terraplane.

> >> Sure he did. He had a cb set, for one.

In a continuing effort to keep PROFESSIONAL engineers up to date on what is taking place in industry, I offer the following quote from Scott Robbins, W4PA as posted to the Ten-Tec reflector today:

"Lee Jones, inventor of the Jones filter, is WB4JTR and Ten-Tec's Chief Technology Officer. Lee is a former Collins RF design engineer and has had a significant impact on every piece of equipment we've built over the past 20 years. His latest ham radio-related contribution for us was designing the ultra-low phase noise synthesizer as used in the Orion's main receiver."

Dave K8MN

Which makes them perfect for ham rigs.

>Usually on fixed freqs. None of which has anything to do
>with ham gear particularly today's ham gear. They're miserably slow
>tuning *kluges* by any realistic measure.

I *like* slow tuning. How fast did you set the dial on the '847 for FD? 5 kHz
per turn?

Lookit all the "modern" HF rigs - they typically default to a tuning rate of
5-10 kHz/turn. I was doing that in my homebrew rigs 35 years ago.

The best Millen and National could do was a weenie 10:1. Miller came up with that goofy 6:1/36:1 planetary that cost the earth and felt like mush.

A good BC-221, ARC-5 or LM cap will do the job better and for a lot less money and grief. Real gear drive, low torque, nice dial, etc.

Was the S-line a "kluge"? Tuning rate was 20 kHz/turn, IIRC, and took the ham bands in 200 kHz chunks. Covering 80/40/20/15 took 10 bandswitch positions and 10 xtals. Plus going across certain points on the same band (say, 3590 to 3610 or 7195 to 7205) took a bandswitch move and running the dial almost end to end.

I'll take my surplus, thank you very much.

>I could build a complete DC
>rcvr in the space one of those clunkers sucks up and it would have a
>nice smooth tuning mechanism.

Be my guest. You can put it on a website, just like you-know-who hasn't.

>Which is why you got the last of those I
>had. I am not going to be the Last Dinosaur, that's your yob.

Oddly enough, ARC-5 prices keep going up but BC-221/LM prices are down.

OBTW - check out the prices on new rotary optical encoders of decent quality, if you're thinking about a synthesized design.

Remember that you'll probably need one with a lot of slots/steps on the encoder disk. For example, if you want to have a tuning rate of 10 kHz turn and want the steps to be 100 Hz, you need a 100 slot/step-per-rev encoder. If you want faster tuning rate without sacrificing resolution, you need *more* slots/steps.

How many junker BC-221s can I buy for the price of one good encoder?

What kind of light bulbs do most people use? Good ol' incandescents,
fundamentally the same as Tom Edison had more than 125 years ago. Biggest
changes were the use of inert gas rather than vacuum in the bulb, and tungsten
filaments. Both circa 1900.

Internal combustion engines, home construction, lots of others.

Coupla kids stole school HTs (dunno if they were green dot or yellow dot or
FRS/GMRS) and then said they were gonna blow up the school, shoot teachers,
etc. Both were over Len's 14 years of age limit. Both are in really deep stuff.

Sure, transmitting radios don't need licenses or training in proper use....

> written.

David, one of your continuing problems is that you assume that all of
the RRAP rules are written. Some rules born out my your actions, not
necessarily carved in stone with a flood light illuminating it.

> Firstly, this isn't a "radio-related" newsgroup.

But it is.

It is an "amateur
> radio-related" newsgroup.

Please try to keep up. Notice the second "R" in RRAP? Amateur radio
is radio related.

> Len discusses and discusses.

David decides and decrees.

"One of your problems is..."

"This has not been written..."

"This is not a radio related..."

Mostly, his
> windbag routine consists of insulting radio amateurs and the ARRL.
> Sometimes he includes personal historical data having nothing to do with
> amateur radio. Very little of what he posts has a thing to do with any
> current or past amateur radio policy matter.

Like "shooting bears?" I didn't see you complaining about that.

> > If you missed it, then you must must be necrotic. If you support it,

I don't believe that it has been a topic of discussion.

Are you making it one?

> You've been awfully silent on the matter of Scott Pederson. It
> could be said that you must support him.

I don't believe that Scott Pederson has been a topic of discussion.

Are you making him one?

> > So you're either for it or agin it. Support Kelly, Heil, and Robeson?
>

> ...or he couldn't care less.

You get vociferous if Len does something, yet strangely silent if
Kelly or Robeson does something Quitesimilar.

> > Time to get off of the fence.
>
> I'd strongly suggest that you do so--especially if you're sitting on top
> of one of the posts.

The only thing I've been on the fence over was the renewal of my ARRL
membership when the ARRL was recommending a license structure that I
couldn't support. That was years ago.

I've been very clear on other topics.

> Dave K8MN

Are you now making fenceposts the topic of discussion?

> Why, through your SILENCE, Brain!

No "SILENCE." I said "sounds like libel."

> You requoted the statement and didn't
> comment on it.

Must I hang on your every word?

What would be the point? Most of them are lies.

> By your own "Rules of Engagement", failure to comment on
> something means you condone it by virtue of that silence. You've expressed
> those very sentiments in another thread within the last 12 hours.

But where is the rule written?

> Again, you provide us with yet another example of not being able to keep
> your OWN stories straight, Brain.

The story is yours. I said it looked libelous.

> >I hold my agreement in abayence. Exactly what are you gualled about?
>
> I think you meant "gaulled".

Sorry. I thought you meant "gald.".

> We could start with your complete lack of character, your DOCUMENTED
> pattern of lying and deceit, and we can wrap it up with your complete failure
> to validate even ONE example of your self-proclaimed "superior operator"
> status.

Strange. The very same thing is said about you.

> And that's just what we know of you from THIS forum. I shudder to think
> what any deeper investigation might reveal.
>
> Steve, K4YZ

You own several Yahoo groups, and have been kicked off of at least one.

Breakfast? Lunch? Dinner?

Jobs?

> Had you READ Dave's comments on "CQ Magazine", you might have really
> understood what he said and to whom. He said nothing of the like about "CQ"
> being a "membership" organization. Nothing.

Something was a membership organization, and Dave chose to make it CQ.

His mistake.

> Instead you completely misquoted him.

I hit the "reply" button. Google makes the quotes.

> Of course intentional misquotes are
> the ONLY way either you or Lennie can perpetuate your silliness.

Your sickness.

> Then the comment about Brian Kelly wanting to "bend you over" on the air.
> What a hoot.

Hmmm? I don't recall the "on the air part." Please correct your
statement or post where I said that.

> The objective was to give you an opportunity to prove even some of the
> smallest of your assertions, one being that you have enough smarts to generate
> some RF. Seems you can't even do that.

But you continue to lose sight of the fact that I have nothing to
prove to you or Kelly.

Best of Luck.

> You have lotsa claims of operating
> from distant places, portable callsigns, and operation from DX locales that
> lotsa guys would love to operate from,

Yup. That's why you guys hate me. Get over it.

> yet you can't come up with ONE QSL card
> or reference that validates any of it.

I've repeatedly told you that you are NIL. NIL's don't get QSL cards.
Get over it.

> And then you oddly quoted my XYL's QRZ info and claimed I "dragged her
> into this discussion" after stating I'd rather find myself next to her than
> you.

So how/why is she germane to any discussion that we might have?

> I guess I hurt your feelings.

Actually, I'm glad that you're showing a preference for women after
your years of commenting on male genitalia. A step in the right
direction.

> I find the really funny part is that she has 329 look-ups (per your own
> quote) to your (as of MY look this AM) 319.

Who would look me up? I haven't DXed or contested in years.

> Seems it doesn't take much to beat you at ANYthing, Brain...Even by my

I'm really having trouble deciphering "born out my your actions".
Did you perhaps mean "Some rules borne out by your actions"?
Was there supposed to be a verb in there somewhere? I made no comments
concerning "the RRAP rules", written or otherwise.

> > Firstly, this isn't a "radio-related" newsgroup.
>
> But it is.

No, it isn't. Read statement below:

> It is an "amateur
> > radio-related" newsgroup.
>
> Please try to keep up. Notice the second "R" in RRAP? Amateur radio
> is radio related.

This is not a general interest radio newsgroup.

> > Len discusses and discusses.
>
> David decides and decrees.
>
> "One of your problems is..."

...and an illustration was provided.

> "This has not been written..."

...is not a quote from me.

> "This is not a radio related..."

Actually, this one should have been "This is not a 'radio-related'..."
and it isn't. This newsgroup concerns amateur radio policy, not
broadcast radio policy, Citizens Band radio policy, GMS radio policy or
general radio policy. You can try making this into a "Sorry, Hans.
Mars is" argument but I'm not buying it.

> > Mostly, his
> > windbag routine consists of insulting radio amateurs and the ARRL.

My bride and I are both packrat types. That's one reason we had to
build the 16 x 30' barn. Thankfully, there's heat out there so the
stuff doesn't get damaged.

I have a cousin going through all of that now. His soon-to-be-ex is
another Hummel fanatic. There wasn't an uncluttered flat surface in
their large house. His lawyer told him pretty much the same thing as
yours told you.

Could be CC&R problems. It could be wifely concerns about the chil'ren.
It could be his concern about what the neighbors will say. A simple
A-frame mast or even a 4x4 topped with a 2x4 would have given him
another support. He could have easily protected the fed portion from
the chil'ren.

Our old B&W TV in Oak Hill, WV must've had a 21 meg IF. I ate it alive
every time I tried to get on 15m with the old DX-40. I spent my days as
a Novice on 40 and 80m.

>
> Heeee! Precious moments in ham radio.

There are guys (beer drinkers, not hams) STILL talking about it!

We were in a two-house compound in Botswana. A chunky, middle-aged,
single personnel lady moved in next door. She raised hell about my 160m
sigs setting off her burglar alarm. One embassy staffer tried to be
helpful. "David is transmitting at way too high a frequency", he
opined.

Only the Regional Security Officer, the younger brother of actress
Margarent Colin, had a handle on the situation. I outlined the problem,
including the fact that none of the alarm system wires was shielded.
He had the house system rewired by a local technician. When the guy
showed up with some small shielded cable, Tom said, "This stuff is too
thin and unobtrusive to run down her walls. Don't you have any fat gray
or black cable that'll really show up?" That's what they used, big ugly
gray wire running to each motion detector head. It eliminated the

personel officer's problem and mine.

I evaded nothing.

I stated that I trust my source more than I trust ANYthing you or Lennie
say.

I know the man from face-to-face meetings.

He retired after 30+ years at the facility in question. Lennie was there
less than three years and was never, to my knowledge, permitted to retun on ANY
contract.

He's a member of numerous community service organizations and is the only
person I have ever known to NOT run for re-election for a community office, yet
still get re-elected in write-ins.

>> >Oh, nevermind. You're a habitual liar.
>>
>> I am sure you wished it was true.
>
>Actually, I wished it were not true.

Well you're in luck, because it's not. See...I "made your day" by making
one of your wishes come true~!

>> We'll discuss it at next Dayton...See you there, Brain!
>
>Stay away from me.

Afraid of having to look someone in the eyes and THEN tell your tales,
Brain?

>Whether or not I'm at Dayton will be a mystery to you.

No it won't.

>> >> > More a successful con-man than
>> >> >> "professional in radio"
>> >>
>> >> I am gald you agree.
>> >
>> >Wherever did you get that idea?
>>
>> Why, through your SILENCE, Brain!
>
>No "SILENCE." I said "sounds like libel."

Uh uh uhhhhhhhhh!

Brain trying to wiggle out again! BAD Brain! BAD ! ! !

>> You requoted the statement and didn't
>> comment on it.
>
>Must I hang on your every word?

Well here you go again, Brain!

YOU have directly accused numerous other posters for NOT commenting on the
word, actions or comments of others, thereby allegedly "condoning" said
conduct. You've made THAT assertion several times within the last 30 days.

Now you've been caught re-quoting stuff that substantiated what >>I<<
said, yet now that "rule" doesn't apply!

So now do you suppose everyone ELSE must hang on YOUR every word, Brain?
Or are they "condoning" something just because they choose to skip over posts
you make?

>What would be the point? Most of them are lies.

None of them are lies. And in any case, Brain, "most" implies a
significant majority.

You are challenged to answer each and every one of my posts and PROVE that
the content of more than 50% of them are mistruthful, deceitful, or in error.

Remember...YOUR silence is condoning whatever I say should you NOT respond
to even ONE post on that topic!

>> By your own "Rules of Engagement", failure to comment on
>> something means you condone it by virtue of that silence. You've expressed
>> those very sentiments in another thread within the last 12 hours.
>
>But where is the rule written?
>
>> Again, you provide us with yet another example of not being able to
>keep
>> your OWN stories straight, Brain.
>
>The story is yours. I said it looked libelous.

Oh...I SEE!

YOU can quote, re-quote, and re-re-quote ONE SENTENCE that I made, OUT OF THE CONTEXT of the whole post that it was made in, yet when its turned on you, suddenly you want different rules applies, written or unwritten.

>> >I hold my agreement in abayence. Exactly what are you gualled about?
>>
>> I think you meant "gaulled".
>
>Sorry. I thought you meant "gald.".

Well...there you go trying to think again.

>> We could start with your complete lack of character, your DOCUMENTED
>> pattern of lying and deceit, and we can wrap it up with your complete
>failure
>> to validate even ONE example of your self-proclaimed "superior operator"
>> status.
>
>Strange. The very same thing is said about you.

Oh?

By whom?

Lennie? Vipul? YOU...?!?!

I, on the other hand, AM in the logbooks of several RRAP'ers (mixed modes), and am on the ARRL's DXCC (also mixed modes). Certainly no "superior operator", but then (a) I never made so stupid an assertion, (b) at least there is third party corroboration of what I have said and/or done, and (c) K4YZ has appeared in the various Amateur related publications on occassion in contest result columns, public service events, and as a group pariticpant in various club activites since I acquired the call in 97. You may refer to any of my previous callsigns before that.

Unless you can point out an example to the contrary, I've never seen YOUR call (ANY of your calls) in ANY publication other than one of the callsign servers.

>> And that's just what we know of you from THIS forum. I shudder to
>think

>> what any deeper investigation might reveal.

>You own several Yahoo groups...(SNIP)

Yes, I do.

"CAP_Communications" has 136 members. The topic should be self explanatory as to it's purpose and application.

"ER-Nurses" has over 400, many in Western Europe, the United Kigdom, Australia and New Zealand, in addition to the Canadian and US members. There was one in Uruguay, however I think she moved back to Toronto.

"CitizenSoldiers" has over 50. It's a forum for veterans, members of the Auxiliaries, and/or any of the lawful state defense forces.

You (and anyone else here) are welcome to join any of them if you have some interest in any of them. The archives of each are open, BTW, and you're free to browse.

>....(UNSNIP)...and have been kicked off of at least one.

John K's group...THAT really hurt! Owie...Ooooie....

Now...what does my "ownership" of several discussion groups have to do with YOUR patterns of lying and deceit...?!?! Still trying to figure out how your "PuppetBoy" brain figured that they were somehow germane to the discussion about your online conduct.

Brain, you're an idiot.

There, re-quoted for your OWN edification, is exactly what YOU posted.

Feel free to follow the headers backwards if you don't "trust" what I
quoted above.

Like I said...You don't even have the skills to keep your own stories
straight.

Thanks for once again making my "job" here so simple.

Perhaps you should get Mrs Brain to un-tie that hand you said you told
Lennie you had tied behind your back.

Steve, K4YZ

Brain was probably one of those folks who sat around mumbling "Why doesn't
Anita Bryant keep here mouth shut...?!?!"

And now that he's hooked up with Lennie the Lame, I am sure the whole
thing hits just a lil bit closer to home!

>> The only thing I've been on the fence over was the renewal of my ARRL

For sure...

Goofball can't remember what he wrote just 2 days prior, so it's of no
small wonder at some of the things he must "believe"...For example he beleives
that some butter bar LT can give him permission to operate Amateur Radio from
within the jurisdiciton of another country.

He also believes that "unlicensed devices play a major role in emergency
communicaitons" I am still waiting one some kinda validation of that.

No, actually CFC keeps the 27.8 cents, not ARRL.

Doncha just hate it when someone spoils your rant?

>
>Actually, that was in response to one of Windy's tales of Soviet Bears,
>"Willie".

I recall Len underestimating the distance from where he was stationed to the USSR and North Korea. The difference was more than 25%. He also mentioned how long it would take one of those aircraft designated 'Bear' to reach where he was - neglecting to mention that none were in service until after he had left the area.

Meanwhile, he disputes and denies W3RV's experiences with the US Navy.

>> > > If you missed it, then you must must be necrotic. If you support it,

Who started it?
>
>It is up to Jim whether he cares to comment on a post or not.

True. It is also dependent on whether I actually read a posting. I don't read every post, and of the ones I do read, I don't always read all the way through. This method has made rrap much more enjoyabel for me, and saves lots of time and energy.

Incorrect use of deductive logic. Otherwise we could say: Roses are red,
Apples are red, therefore roses are apples. Or we could go: Dogs are
carnivores, bears are carnivores, therefore dogs are bears.

Hi, hi!

Wrong again.

See the part, "Hey Len, I've been...."

That was my comment.

I did not make the "... on the air" comment.

Hi, hi!!!

You can retract your lies at any time, and this is the proper forum to do so.

There's no "innuendo", Brain.

You engage in one pattern of conduct when Lennie's not "around" for any period of time.

When he "returns", your conduct changes to that of someone trying to please him, as if a lover trying to satisfy thier mate.

It superceeds the "male bonding" framework.

Hardly.

I DID prove that you had "forgotten" what YOU had stated only a couple days previously. That's archived in YOUR post.

You have also stated in past correspondence that your commander gave you "permission" to operate Amateur Radio from Somalia. If it was something othr than a butter bar, I stand corrected, however you DID state it, Brain.

If it was other than an LT, I am in error, NOT lying.

Why?

You RE-QUOTED the VERY SAME PARAGRAPH in which YOUR original assertion was made, Brain!

QUOTE: "...and Kelly want to get me on the air so he can bend me over"....
^^^^^^^^^^^^

For the third time, Your Dimwittedness, there's YOUR words, requoted with header.

Idiot.

> per turn?

Since you're the Chief RRAP Tuning Rates guru and you didn't have a
problem with it one way or another during FD you should know right off
what it was. So you tell me. Hmmm? (here comes my second beef sammich
. .)

> Lookit all the "modern" HF rigs - they typically default to a tuning rate of
> 5-10 kHz/turn. I was doing that in my homebrew rigs 35 years ago.

. . . . and . . . ?

> The best Millen and National could do was a weenie 10:1. Miller came up with
> that goofy 6:1/36:1 planetary that cost the earth and felt like mush.

I still have a couple very nice smooth reduction drives out that era
which would great for tuning a little DC rcvr. I wouldn't use 'em for
anything more than a small-bore app like that.

The Heath harmonic gear drives were really slick too.

> A good BC-221, ARC-5 or LM cap will do the job better and for a lot less money
> and grief. Real gear drive, low torque, nice dial, etc.
>
> Was the S-line a "kluge"? Tuning rate was 20 kHz/turn, IIRC,

Is that a complaint or a compliment?

> and took the ham
> bands in 200 kHz chunks. Covering 80/40/20/15 took 10 bandswitch positions and
> 10 xtals. Plus going across certain points on the same band (say, 3590 to 3610
> or 7195 to 7205) took a bandswitch move and running the dial almost end to end.

Real Hams have a cure for that. One xtal covers the usual 3.5-3.7
segment for CW contests and other xtal covers the 3.7-3.9 segment for
the phone contests. For the 40 phone contests ya listen with the
75S-3B and transmit with a 32S-3 equipped with a 7.1-7.3 xtal. Then
Drake came out with rigs which tuned 500 wide Khz segemnts per xtal
which completely eliminated the problem.

> I'll take my surplus, thank you very much.

Did I ever thank you for getting all my surplus junk outta my life?

> Oddly enough, ARC-5 prices keep going up but BC-221/LM prices are down.

Freq meters ain't radios.

> OBTW - check out the prices on new rotary optical encoders of decent quality,
> if you're thinking about a synthesized design.
>
> Remember that you'll probably need one with a lot of slots/steps on the encoder
> disk. For example, if you want to have a tuning rate of 10 kHz turn and want
> the steps to be 100 Hz, you need a 100 slot/step-per-rev encoder. If you want
> faster tuning rate without sacrificing resolution, you need *more* slots/steps.

I'd simply call yer buddies at Elecraft and pay the $69.13 for a K2
encoder then swipe the circuitry it uses out of their schematics and
have 10 Hz resolution. If I was anal enough I'd pick up an FT-847
shaft encoder instead and get 100 times better resolution than ya gat
out of the K2 display . . "Do not reinvent wheels".

> How many junker BC-221s can I buy for the price of one good encoder?

At five bucks a pop you could get 13 of 'em. Imagine: 13 BC-221s all
to yourself James! Orgastic! Could you stand it?

Rattlers. Not that I had any choice in the matter. I assume that by
now you've caught up with the fact that the PRR went belly up at least
partially as a result of it's antiquated capital investements. Like a
gazillion MU-54s.

Perhaps.

The most pertinent question is:

Why is Len so interested in the requirements for a ham license, since:

A) He obviously doesn't want a license
B) He isn't involved in manufacturing equipment or other products for hams
C) He's not really involved in amateur radio in any way other than verbose
newsgroup postings and FCC comments.

So why is he so interested? It's as if I, a non-golfer, made a crusade out of
getting the greens fees for nonmembers at Pebble Beach reduced...

It's not my errors that he's really interested in correcting. It's
the opportunity for him to be an ass and somehow make it my fault.

You constantly evade the truth.

> I stated that I trust my source more than I trust ANYthing you or Lennie
> say.

I asked if you were certain that your accusations were true.

You tell my how you think this source is much more this and that than
another source. Twice. So, you continue to evade the question.

If I had asked you which is the largest of the Great Lakes, and you
told me that Lake Michigan is larger than Lake Ontario, you would not
have answered the question, "Which is the largest..."

Are you certain that your accusations are true?

nonsense snipped

It is your on-line conduct that is questionable. I was not kicked off
of any Yahoo group - you were. Doesn't play well with others. One
day there may a special interest group, Swift-Kick Veterans Against
Steve/K4CAP.

You can keep it from happening by changing your bad behavio[u]r.

Hi, hi!

Best of Luck.

313. The police arrested my radio ! ! !

They told me that it is a rapist and raped at least 25 other radios.

What can I do now? Can they arrest me , too?

Whooaaaaa there! While you guys are arguing minutia, I just have to note that William is taking an exact opposite argument than he does with his "Sorry Hans, MARS >>>IS<<< Amateur Radio!" line. While in that case, he takes Steve's statement and makes a *strict* interpretation in order to make Steve appear wrong, in this case, when speaking of rrap, he uses a *much* looser interpretation.

Loose interpretation is that rrap is a Radio group. (which I agree with)

Strict interpretation is that being an "Amateur Radio" newsgroup it isn't strictly speaking a "radio only" newsgroup.

Just in case anyone is giving points out for consistency!

>> of
>> 5-10 kHz/turn. I was doing that in my homebrew rigs 35 years ago.
>
>. . . . and . . . ?

I wuz decades ahead of the curve. Nowadays, almost *every* rig allows you to do
5-10 kHz/turn. 35 years ago, only the Southgate Type 3 and a very few by other
manufacturers did.

>> The best Millen and National could do was a weenie 10:1. Miller came up

>75S-3B and transmit with a 32S-3 equipped with a 7.1-7.3 xtal.

Right. You spend big bucks for an S-line, and the first step is to spend even
more to replace three of the stock xtals. Of course they weren't expensive
compared to the S line itself.

>Then
>Drake came out with rigs which tuned 500 wide Khz segemnts per xtal

>gazillion MU-54s.

Not really.

PRR was victim of three things:

1) Overregulation by the Feds. Fixed by the Staggers Act of 1980.

2) The interstate highway system

3) A merger with the N&W was refused, but a merger with the New York Central happened. N&W and PRR were similar operations serving different markets; such a merger would probably have succeeded. PRR/NYC were competitors who could not have been much more different; their merger was a complete mess from the getgo.

Oddly enough, most of what used to be the PRR is now part of the Norfolk Southern, which is the direct descendant of the N&W. And most of what used to be the NYC is now part of CSX.

After thinking about it, it makes sense....The ATIS and AWOS systems
repeat the same thing over and over and over...Kinda like Lennie's posts.

>> I'm still waiting for Lennie to regale us with what RF devices our
>lives
>>can't do without that he allegedly had a hand in creating.
>
>Again, not the issue.

Sure it is, Jim!

Lennie has insisted that his "professional" career was far more productive
and useful than anything Amateurs do. I want to know WHAT it was he thinks he
did that is so useful? What is in my home or what do I use on a daily basis
that has HIS direct participation in that I can't do without?

>> Lennie's "contribution" to radio was getting coffee for and staying out
>>of
>>the way of the REAL radio professionals as they did REAL engineering and
>>design work.
>
>How do you know that, Steve?

From the opinions of someone who knew him and worked in the same facility
as he.

>Besides - it's not the issue.

It is as long as Lennie keeps trying to throw his "professional" weight
around. He claims he's a hotshot, but I know of at least one other TRUE
professional says otherwise.

If it's YOUR words I am quoting, how does that make me "an ass"...?!?!

And if YOU wrote them, do you not take responsibility for them? Do you
really NOT mean what you say...?!?!

The fact is that you don't like having YOUR nose rubbed in your knee-deep
errors, falsehoods, deceit and deceptions, Brain, but YOU KEEP DOING IT!

You see, >>I<< have the strength of conviction in what I say to sign my
name to my posts and to not call other people an "ass" when they prove me
wrong. I say "you were right", or "I stand corrected", or other words to the
effect that what I said was wrong, and then move on.

You don't.

Sucks to be you.

No, it's facts.

Anyone with the same Internet access that you or I enjoy can immediately verify what I have stated above. And to narrow it down a bit for anyone who cares, they can find my DXCC "enrollment" in the August 2000 listings.

And you still haven't explained how introducing any of my Yahoo! discussion groups is germane to ANY discussion or argument here, Brain. What's up with that?

>
>Hi, hi!
>
>Best of Luck.

No luck needed, Brain.

John "kicked me off" of his Yahoo (then OneList) group for what went on in THIS forum, not anything that was said or transpired there. That was his one and only way of being "one up" on someone.

Do you think I should ask the State of Ohio to revoke your driver's license just becasue you like to lie and make up storiews on RRAP...?!?!

You will be welcomed on any of my Yahoo! forums under the very same rules that apply to any of the other subscribers to each...There's no flaming, there's certainly no name calling, and the conversations, with extremely rare exception, are directly relevent to the character of the group.

I know those three rules will be hard for you to tolerate, but consider it nurturing.

Steve, K4YZ

Jim, Or it lowers me to Steve's level when I call him "Yell, Yell"
after years of abusing people on RRAP.

I guess I should stay on the high road. Thanks for the encouragement.

And what's up with that guy nurse in Pennsylvania?

>after years of abusing people on RRAP.

Only those who blatantly lie, deceive or otherwise try to be less than honest as a matter of routine. You. Lennie. Mark Morgan. Vipul. Some circle of friends you run with.

>I guess I should stay on the high road. Thanks for the encouragement.

You will never be "on the high road", Brain, except when you make a wrong turn.

You are as much a creature of habit as any of us, and you cannot stand to NOT be what you are used to being...In your case it is mistruthful and deceitful.

>And what's up with that guy nurse in Pennsylvania?

Still with the guys, eh, Brain...?!?! Your wife in on your "alternative lifestyle"...?!?!

Sheeeeesh.

If that's all you do, no, it doesn't. But when name-calling is added....
>
>And if YOU wrote them, do you not take responsibility for them?

Maybe not...

>Do you really NOT mean what you say...?!?!

We've seen examples of that...
>
>The fact is that you don't like having YOUR nose rubbed in your

>knee-deep
>errors, falsehoods, deceit and deceptions, Brain, but YOU KEEP DOING IT!

So why the name-calling?

> You see, >>I<< have the strength of conviction in what I say to sign my
>name to my posts and to not call other people an "ass" when they prove me
>wrong. I say "you were right", or "I stand corrected", or other words to the
>effect that what I said was wrong, and then move on.
>
> You don't.

True.

But all that can get obscured by the shouting and name-calling.

Most of all, you *know* that you're being intentionally baited. (I recall a post where "billy" said he intentionally insults you). By responding the way the other side expects, you lower yourself to their level. Which is what they want.

73 de Jim, N2EY

> Sucks to be you.

If you really believe that, why not have a little pity?

Why?

I prefer to think of this guy:

> a good fist! I think that was one of the proudest moments of my life
> and, I'm sure
> partly as a result, I still like CW and fancy myself a fairly decent
> CW operator. (Some years ago I earned a Code Proficiency certificate
> endorsed at 45 wpm by the ARRL, and I think my code speed is still up
> there pretty good.) I took my Advanced Class exam from my good

> friend, Engineer-In-Charge Marti-Volkoff in San Francisco, in 1976 or
> so. (Although, in saying he's "my good friend", I realize I haven't
> heard from him in a long time, so perhaps he'd consider me only an
> acquaintance. Do you know if he is still in good health, by the way?
> He tried
> to do a good job on ham enforce-ment when he was Engineer-In-Charge,
> and he was quite fair and gutsy.) I've tried to pass my Extra exam a
> couple of times, but I'm one of these old-fashioned people who
> actually wants to learn all that Extra theory rather than just
> memorizing the answers from the question pool. The only problem is
> that maybe I'm just not smart enough to learn all that theory. In any
> event, I never had any problem passing the (former) 20-wpm Extra code
> test, but I failed the Extra theory element by about one question or
> so, and I just never got around to taking the Extra exam again after
> that, so I guess I'm just going to have to be satisfied with being an
> Advanced Class licensee forever.
>
> During my 40-year ham radio career, I've built just about every
> kind of ham equip-ment there is, from breadboard regenerative
> receivers to rack-mounted high-power RF amplifiers, so I feel I am
> fairly-well qualified, technically, to be a ham. I have also provided
> a lot of benefit to the ham community during the entire 40 years of my
> licensure. Here are three examples of my service to the amateur
> community:
>
> 1. In the late '70's, and rather single-handedly, I would add,
> I revived the largely-moribund Oakland (California) Radio Club, was
> elected its President, and coordinated its re-entry into the field of
> disaster communications (from which it had been totally absent for a
> number of years) by working closely with the Red Cross and RACES so
> that Oakland would have the amateur disaster com-mun-ica-tions system
> which it was then lacking.
>
> 2. In the early '80's, by petitioning the (former) Private
> Radio Bureau for relief, I was instrumental in forcing the
> highly-corrupt Grizzly Peak (Oakland), California VHF Amateur Radio
> Club to cease its jamming with code practice, which it had been
> engaging in over a period of 18 months on its repeater on 146.82 mhz.
>
> 3. Also in the early '80's, when I first had occasion to
> discover just what a bunch of liars the Commission's amateur
> enforcement people are, I took appro-priate action to educate the
> amateur community about it. First, I attended the non-renewal
> proceedings against former licensee Gary Kerr, WA6JIY, before ALJ
> Kuhlman. Riley, I've seen many a kangaroo court in my 28 years of law
> practice, but never anything like that run by "circus Kuhlman"! He
> wouldn't let Mr. Kerr say a damned word in his own defense! Don't get
> me wrong; I am not really defending Mr. Kerr's actions, but I am
> criticizing the extremely unfair nature of his non-renewal

> proceedings. By the time Mr. Kerr got before ALJ Kuhlman, the
> Commission and the U.S. Attorney's Office obviously had so prejudiced
> the ALJ against Mr. Kerr that Kuhlman simply wouldn't listen to him!
> After Mr. Kerr lost his license, a large number of his sympathizers,
> including me, decided we were going to serve as Mr. Kerr's control
> operators on 2 meters, so he could use our radios to keep talking to
> his buddies, pursuant to the
> former wording of §97.115(b). The next thing I knew, former
> Commission Regional Director Richard Vaughan was trying to jump down
> my throat, claiming Mr. Kerr, as a former licensee, was not permitted
> to operate as a third party under the former §97.115(b). (Sergei
> Marti-Volkoff, bless his soul, was unwilling to perjure himself, and
> refused to do the job for Mr. Vaughan, so Dick Vaughan had to do it
> himself.) I basically told Mr. Vaughan to go have sexual relations
> with himself, largely as I am going to tell you to do in this letter.
> Former §97.115(b) simply did not prevent former licensees from being
> third parties. So what did Mr. Vaughan do? He got his little minion,
> Carol Fox Foelak,
> who was then Chief of the Compliance Branch of the Special Services
> Division of the Private Radio Bureau (what a mouthful!) to initiate
> rulemaking proceedings to amend §97.115 and, as a result, the "Gary
> Kerr amendment" [§97.115(b)(2)] was added to §97.115! The point is
> that Mr. Vaughan, the Commission's Regional Director(!), was lying
> through his teeth in his warning notices to me: the Commission did not
> have the regulatory power it claimed to have; it was, as usual, just
> trying to unfairly throw its weight around; I called their bluff; and
> Mr. Vaughan eventually had to admit he was a liar by initiating
> rulemaking to amend Part 97 so as to add a provision which he had
> previously told me existed all the time! (So now I see, and as I will
> point out to you later in this Response, that the Commission is still
> up to its old, lying tricks in issuing me
> my Warning Notice.) My action, in forcing the Com-mission, in effect,
> to admit that it is composed of a bunch of liars who will distort the
> true meaning of the Rules in order to make their own jobs easier, and
> who will try to concoct enforcement powers that don't exist, was of
> great benefit to the amateur community because it helped all amateurs
> recognize and understand just what kind of scoundrels are actually
> running the Enforcement Bureau, and made it much more unlikely that
> amateurs would, in the future, permit the Commission to take unfair
> advantage of them.
>
> Anyway, as you can see, I've been a ham for 40 years now; and
> I've really tried to be a good one, and I've rendered a substantial
> benefit to the amateur community during my entire period of licensure!
> I've gone through the whole ham radio indoctrination process, I'm
> familiar with all the ham radio traditions, and it has been a large

> amateur rules, and further with respect to the level of credibility
> which the ALJ and the courts should accord to your testimony.
> Specifically, I have heard that you spent $5,000.00 of the taxpayers'
> money in one weekend at the Las Vegas hamfest, and if this
> allegation proves true, then I just don't see how you can really
> properly spend

> that much taxpayer money in one weekend.
>
> Now I really don't know about FCC administrative proceedings,
> but in California we believe that it is unethical for an attorney to
> both represent a party and testify as a witness in the same proceeding
> on the basis that, if not actually unethical, the practice leads to
> the appearance of impropriety. That is, the attorney's credibility is
> inevitably compromised if he is permitted to both testify as a witness
> and advocate a party's case in the same proceeding. Therefore, I am
> advising you now that if you take me to an administrative hearing in
> this matter, I am going to call you as a witness on the issues of your
> integrity, competence and credibility, and that I am going to resist
> the ALJ allowing you to both testify on those and other issues and
> represent the Enforcement Bureau at the same time, so I would
> respectfully suggest that perhaps you should make arrangements to be
> represented by the U.S. Attorney's Office in this matter, assuming the
> ALJ follows the same rule of ethics that the California court does,
> which it seems they should.
>
> Anyway, Riley, if I have to examine you as a hostile witness on
> the issues of your integrity, competence and credibility, I'm placing
> you on notice now that I'm also going to ask you all about the
> "phonetics fiasco", among other things. How long have you been a ham
> now, and how long have you been doing enforce-ment, and why didn't you
> even know that hams have always been supposed to use phonetics?
> Riley, the huge list of phonetics appeared in both the old and the new
> (post-1989) versions of Part 97! Didn't you ever read either version?
> And over how many years didn't you read them (at least 20 years,
> obviously, because you didn't see it in either version! Probably
> because, during that time, you were saying we hams were
> "self-policing", the exact opposite of what you're saying now, so you
> didn't have to read Part 97 for over 20 years!)? Or didn't you think
> you had to read Part 97 before last year because only then did you
> decide to begin making your career moves by kissing up to the
> brownshsirts, and your highly-touted enforcement actions merely
> represent your efforts to gain promotion? (And if a little illegality
> and unfairness to licensees results from your desire to make a name
> for yourself in enforcement, we all know those licensees can't really
> effectively complain about it, don't we?) Also, during that 20-year
> period, did you actually have any on-the-air experience, because if
> you did then you would have heard hams using phonetics all the time!
> So I must conclude that you had absolutely no on-the-air experience,
> so where in hell do you get off telling me how to operate? And then
> you publicly plead "temporary
> insanity due to excessive RF exposure" as a defense, because you are
> otherwise at a complete loss for words? Well, then, Riley, since you
> raised the issue, I am entitled to examine you about whether your
> admitted "insanity" is temporary or permanent in nature; I need to
> know if you were still suffering from it when you issued my Warning

> Notice; and I intend to do that if you take me to an adminis-trative
> hearing. Of course I realize you may only have been joking when you
> said you were "temporarily insane" but, again, you raised the issue, I
> didn't, and I really need to ask you all about it at an
> adminis-trative hearing if I am going to find out about it for certain
> and thereby properly protect my interests as a licensee. I mean,
> you're the one who joked around about it, not me. I was just left to
> wonder exactly what you meant by such a lame joke. And if you were
> only joking about it, why were you reduced to being required to joke
> about it, rather than providing some substantive reason for your
> lapse? Was it really your attempt to avoid admitting that you really
> don't know your derriere from a hole in the ground about amateur
> enforcement? I intend to go into all of this at an
> adminis-trative hearing!
>
> So now for my factual refutation of your charges. First, I have
> never been on 3857 khz. in my life, and whoever told you I was is
> wrong. In other words, you're making another one of your mistakes. I
> have deliberately avoided that frequency because that's where Orv
> Dalton's (K6UEY) old buddies hang out, and they ran him off that
> frequency. I didn't want to get involved in Orv's dispute with the
> 3857 group, because I want to talk to Orv on 3830 and I've always
> wanted to give Orv the benefit of every doubt, i.e., a clean slate
> with no pre-con-ceived notions, in our on-the-air relationship. Now,
> Orv is your com-plain-ant, isn't he? Well, I've been nice to Orv. I
> have no problem with him, to my know-ledge. I thought we always got
> along just fine. He never contacted me to indicate there was any
> problem before he complained to you. In fact, since he sent you his
> complaint, I have spoken to him several times on 3830 and we got along
> just great. Therefore, I was extremely surprised to receive your
> Warning Notice, since I had absolutely no idea that Orv had any
> grievances against me. Actually, I do remember now that I had one
> disagreement with Orv on 3830. It occurred when another station,
> Dennis Flora (N6UJY I believe his call is) showed up "drunk and
> disorderly" on the frequency. I agreed with Orv at the time that
> Dennis should go away until he sobered up, but Orv and I disagreed
> about whether he should be allowed back on the frequency after he
> sobered up. Apparently Orv seems to feel that he is the guardian of
> all ham radio morals or something, and unilaterally decided to run
> Dennis off the frequency every time he showed up after that, and I
> took issue with Orv about it. Riley, you should be on my side, not
> Orv Dalton's, because he had no right to try to run Dennis off the
> frequency! Is that why he's so mad at me? Well, why in hell didn't
> you require him to try to work out the problem
> (whatever it is) with me directly before issuing your Warning Notice?
> I assure you, Riley, that I would have been very cooperative, had I
> been asked to change my on-the-air behavior in some respect that was
> bothering Orv (except with respect to trying to run other stations off
> the frequency if he happens to dislike them; I would never have agreed

> with him about that), but I never got the chance because he never
> asked me to do so! If a ham takes the trouble to contact me to
> complain about my operations, I always take it very seriously and try
> to remedy any of my short-comings because I really have an image of
> myself as being a "stand up kind of guy" where the ham radio is
> concerned. So whatever happened to the concept of hams being
> "self-policing", anyway? I notice that you give it a lot of lip
> service in your Warning Letters, but as far as I can tell, lip service
> is all it is!
>
> As to 3820, we have discussed this matter before, and you
> specifically approved of the way I handled it, which involved my
> voluntarily going off that frequency forever. Indeed, in your e-mail
> to me on the subject, you stated you questioned the other stations'
> operations, not mine! I thought that was a final settlement of that
> matter, and conducted myself accordingly; i.e., I haven't been back on
> that frequency since. I kept our agreement on the assumption that you
> would, too, but now I find that you apparently do not wish to honor
> your own agreement, or probably that you've forgotten about it, and
> that you are in effect trying to punish me for being a gentleman with
> respect to the 3820 situation and for taking the initiative in solving
> the problem! So are you doing this on the principle that "no good
> deed should remain unpunished", or what? Now I am not saying I am
> going to go back on 3820 after receiving your Warning Notice, although
> it does seem that I should have the right to do so, but not because
> you are telling me to stay off, because you have no right to tell me
> that because you won't even honor your own agreement, but instead
> because, in addition to making a deal with you, I also made a deal
> with the other 3820 users and I am going to keep my word to them, even
> if you're not going to keep your word to me! However, I am most
> definitely going to assert your prior agreement about 3820 under
> either collateral estoppel or res judicata principles as a full and
> complete defense to any enforce-ment proceedings that you may bring
> against me for any
> transmissions I ever made on 3820! I haven't been back on that
> frequency since you agreed with the way I handled the situation,
> Riley, so why in hell are you talking to me about 3820 now? Nothing
> has changed since we entered into our agreement, and you're still
> bound by it, my friend! I think perhaps you forgot about it! And I
> am also saying that I am going to assert your forgetfulness, or
> refusal to honor your own agreement, as another example of your
> mistakes, lack of competence and lack of credibility. You're simply
> trying to do too much enforcement, too fast because you're trying to
> please the brownshirts and to over-com-pen-sate for the 20 years when
> the Commission told us hams that we were "self-policing", and
> meanwhile did no enforcement what-soever, and you're trying to make me
> pay the price for your own career-climbing and failure to enforce the
> rules during that period! And I don't appreciate it one bit! I have
> no intention of being your scapegoat!

>
> Next, there is the 3830 situation. Apparently someone has sent
> you a tape of my transmissions on that frequency, although I can't
> imagine why, and you rather pointedly did not volunteer the
> information in our telephone conversation. The short answer to your
> Warning Notice is that my transmissions on 3830 are not only
> specifically permitted under Section 97.1
> of Part 97, the "Basis and Purpose" section of the amateur rules, but
> they are
> precisely the kinds of transmissions envisioned as being necessary and
> appropriate under ��97.111(a) and (b). I was making inter-est-ing
> conversation in all of my transmissions, and such trans-mis-sions both
> contribute to the advancement of the radio art under §97.1(b) and
> advance my skills, and those of my fellow amateurs, in the
> communications phase of the art within the clear meaning of §97.1(c).
> Furthermore, I was helping to expand the existing reservoir of
> operators in the amateur service, as §97.1(c) tells us we should do,
> because too many boring QSO's on 75 meters are driving licensees out
> of the hobby. If you take me to a hearing, I am going to present
> evidence about how boring 75 meters is, and how I was providing a
> worthwhile alternative to that boredom. This is encouraged by §97.1,
> and therefore clearly does not constitute a violation thereof, as you
> wrongfully claim! The only problem is, if you force me to put on a
> lot of evidence about how boring and underutilized 75 meters is, it is
> going to redound to the injury of the amateur radio service because I
> will make sure that other radio services hear about it, and they will
> jump on that testimony as a means of bolstering their arguments that
> they should have the frequencies instead. If you take me to an
> administrative hearing, I am going to contact representatives of the
> other radio services and invite them to attend the proceedings so they
> can see how you've screwed up the amateur radio service, because at
> this point I'm starting to think that they really do deserve the
> frequencies more than hams do, and your mismanagement of the amateur
> service is something they should know about in making their arguments
> for frequency
> re-allocation. So any further enforcement action that you may take
> against me in this matter is really going to hurt ham radio, and if it
> does, you have only yourself to blame.
>
> Let me object here to your rather unremitting attempts to argue,
> in just about all your enforcement cases and your cheap shot, form
> letter warning notices, that §97.1 somehow gives the Commission the
> authority to regulate hams' free-speech rights on the radio. This
> wrong-headed litany of yours, besides having become extremely
> monotonous and boring to me, is just another example of your
> misinterpretation of Part 97, and of how you unfairly throw your
> weight around, by coming down on hams with the full power of the
> federal government and the U.S. Attorney's office, on another one of
> your cockamamie regulatory theories! And you do it because you want

> to keep the brownshirts happy, you want to get promoted, you want to
> be able to issue more press releases, and you know that hams are very
> unlikely to be able to successfully challenge your actions!
>
> Section 97.1 gives the Com-mis-sion no regulatory power vis-�-vis
> free speech! It is merely the general "Basis and Purpose" section of
> the Rules, and I really resent your acting as if it gives you the
> power to regulate our free speech! As far as I am concerned, it just
> represents another example of the federal govern-ment trying to abuse
> its power, throw its weight around, and bluff the public into
> submission with its power. So I am placing you on notice now that if
> you take me to an administrative hearing in this matter, another issue
> I am going to raise is to whom §97.1 grants rights. My position is
> that it grants rights only to licensees, not the Commission. Indeed,
> §97.1 forms the primary basis for my defense to your unfounded
> allegations. My transmissions on 3830 were affirmatively per-mitted
> by §97.1, and you don't have any regulatory power under §97.1 to tell
> me that they were wrong! And even if you did have such regulatory
> power, the language of §97.1 is so vague that it could not
> constitutionally be applied to regulate hams' free-speech rights.
> Clearly under §97.113(a)(1), your regulatory power comes exclusively
> from §§97.113, not from §97.1 You have to have an actual Rules
> violation in order to prevail in administrative proceedings, and you
> just don't have one in my case. Bernard J. Winner v. FCC (1980) 82
> FCC 2d 343 and Walter Norman Russell v. FCC (1983) PR Docket Nos.
> 79-322 through 79-324.
>
> Under your perverted enforcement theory, you can punish hams
> under the general "Basis and Purpose" rubric of §97.1, even though
> there is no Rules violation, which is totally contrary to Winner,
> Russell and §97.113(a)(1)! Hams are entitled to know to what extent
> the Commission can legally restrict our free-speech rights, so we can
> govern our speech accordingly, and §97.113 is the only section of Part
> 97 that allows you to do so. And Riley, you can tell me until you're
> blue in the face, like you've told so many other licensees to whom
> you've sent your cheap shot form letters, that I am "seriously
> misinformed" about the meaning of §97.1, but I'm telling you right now
> that I've already done the research and can prove that both the law
> and the legislative history of §97.1 are against you!
>
> In determining the free-speech rights of ham radio operators,
> any court is going to apply the specific language of §97.113 and not
> the very vague and general language of §97.1. That is an elementary
> principle of statutory construction as it affects citizens'
> free-speech rights. (I am going to omit the citations in this regard
> at this time, because I am sure you are familiar with them.) Indeed,
> the plain language of §97.113(a)(1) requires that there must be some
> specific prohibition against the conduct in question, not merely some
> vague and generalized alleged "violation" based upon the "Basis and

> Purpose" language as is found in 97.1, before any enforcement action
> will lie on your part Do you want a court to finally and definitively
> determine that you have no enforcement power at all under 97.1,
> because I'm going to push that issue hard if you're going to treat me
> so unfairly!
>
> So, in order for any enforcement action to lie under Part 97,
> the act complained of must be specifically prohibited by 97.113 or
> some other Section of Part 97. [Again, please see 97.113(a)(1)] The
> problem with your case is that I committed no such act. Now you say
> you have some tapes of me. Send them on over! I'd really like to
> hear them! I've never said anything on the ham radio that I was
> ashamed of, Riley, so I'd be glad to have an ALJ listen to what I said
> and then decide whether your admitted insanity was temporary or
> permanent. As I've mentioned, I will put my credibility and integrity
> up against yours any day of the week, my friend, with no problem at
> all. And, let me point out to you again, my trans-missions were
> specifically authorized by Part 97, so you are really 'way off base in
> issuing me a Warning Notice!
>
> In addition to being specifically authorized by 97.1, as
> discussed above, my transmissions were also authorized under 97.111
> as being ones necessary to exchange messages with other stations in
> the amateur service! In other words, my transmissions were exactly
> the kinds of transmissions that are envisioned as necessary and
> appropriate under the Rules, but you are trying to second-guess
> everything I've said on 3830 and punish me because you don't like the
> substantive content of my speech! I have absolutely no intention of
> tolerating that. Any attempt by you to try to force me to change
> frequencies, or to stop using any assigned frequency on which I have
> the right to operate, would constitute a content-based restriction on
> my free-speech rights, would be unconstitutionally vague and would
> therefore warrant strict scrutiny by the courts. There would also be
> a violation of 326, the anti-censorship provision of the
> Communications Act [47 USC 326 (1970)] because you would be
> restricting the content of amateur radio transmissions without
> justification, and this would give rise to a civil rights violation.
> I am going to pursue such an action if you don't rescind my Warning
> Notice.
>
> There is also long-standing case law, in a highly-analogous Part
> 95 case, that the Commission can only prohibit a certain type of
> conversation over a particular frequency when the alternative would be
> to deny many intended users any access to the frequency. Lafayette
> Radio Electronics Corp. v. U.S. 345 F.2d 278, 280 (2nd Cir., 1965)
> (love that Second Circuit!). Even a cursory analysis of the elements
> of the Lafayette Radio decision demonstrates that the facts in our
> case militate in my favor and against the position of your
> complainant: after all, if I am allowed to stay on the frequency,

> everybody can use it. But if you allow your complainant to dictate
> who can use the frequency, then I am totally barred from its use and
> the other hams who want to talk to me cannot do so. Such a decision
> would violate Lafayette Radio. Riley, you should have considered the
> effect of the
> Lafayette Radio case before you issued me your cheap shot Warning
> Notice! Now I fear that I am going to have to raise this as another
> example of your rather obvious ignorance of the law (i.e., lack of
> competence) or deliberate mis-statement of the law (i.e., lack of
> integrity and credibility) if we must proceed to an administrative
> hearing in this matter.
>
> I'm sorry if I sound quite upset, but, Riley, you really take a
> lot of cheap shots in your Warning Notice! Really, that's what I'm
> starting to think you are, a cheap shot artist but nothing more! Sir,
> I have done nothing to deserve this kind of treatment! The only
> question at this point is, are you going to be a gentleman and retract
> your mistaken Warning Notice, or are you going to continue taking
> cheap shots at me, with the full power of the federal government
> behind you? You talk in my Warning Notice about my activities
> allegedly "degrading the hobby". Well, I have news for you, sir: I
> was never required to accept your opinions about what topics are
> appropriate for discussion on amateur radio(except for obscenity and
> threatening criminal acts),and I am not about to start accepting them
> now! In my opinion, my judg-ment about what degrades the hobby is
> better than yours, thank you very much! In my opinion, what most
> degrades the hobby is the really lousy job the Commission has been
> doing on amateur enforcement (especially the way you're pandering to
> the brownshirts), not any of my activities!
>
> My point is that my opinion about what "degrades the hobby" is
> just as valid as your opinion, I simply am not required to accept your
> opinion on the matter; and you have no right to try to force your
> opinions on me under the guise of §97.1, or any other language
> appearing in Part 97. I am also going to go so far as to say that I
> am just as good a person as you are, and I have absolutely no
> intention of letting a career bureaucrat like yourself gratu-itous-ly
> insult my integrity when I am making an honest living in the private
> sector and am paying your salary with my taxes. I am not required to
> accept your judgment as to what topics are appropriate for discussion
> on the ham radio, nor do I want to accept your judgment on the issue.
>
> Moreover, I should advise you that, for reasons which may be
> obvious to you, I am in the habit of very seldom doing that which I am
> not required to do and also do not wish to do. I liken it to a
> bicyclist choosing to ride on the road, even when a separate bike path
> is available to him (I'm sure you know how some motorists object to
> that): his use of the bike lane is optional, not mandatory. He has
> the right to ride on the road if he wants, and nobody has the right to

> tell him otherwise. Likewise, I have the right to stay on 3830 merely
> because I want to, and even though, as you point out, other
> frequencies are available for my use, and I really don't need you
> trying to bullshit me by telling me otherwise because you just don't
> have the authority to do so, so please save your breath! It is
> strictly my decision about whether or not I want to go QSY! You don't
> have any violation of Part 97 that you can prove because none exists,
> so you try to score public relations brownie points by calling me
> names instead. You really ought to be ashamed of treating a taxpayer
> this way, but you probably won't be. You owe me an apology for this
> embar-ras-sment! I find your statements about what you
> think are acceptable topics of conversation on the ham radio to be
> extremely
> fatuous, since you lack entirely the enforcement power to effectuate
> them, and your ventilations in that regard really amount to nothing
> more than attempting to throw your weight around, play to the
> brownshirts, and wait for someone like me to call your bluff. Well, I
> guess someone has. Have you ever heard about the piss ant who crawled
> up an elephant's leg with rape on his mind? Well, I'm the elephant
> and you're the ant! I mean really, Riley, I find your opinions about
> what is proper conduct on the ham radio (assuming no other violation
> of §97.113) rather boring and unconvincing, and I am really not
> interested in them in the slightest, nor am I required to display any
> interest in them, so please don't try to convince me that you have the
> right to tell me what I can say and what frequency I can choose,
> because you don't! In fact, you sound like something of a dweeb to
> me, and I therefore think I wouldn't even enjoy talking to you on the
> radio very much, so please don't presume to tell me how to talk to my
> fellow amateurs!
>
> Do you know what else I find very fatuous about your Warning
> Notice, and about our subsequent telephone conversation? The way you
> make the facile assumption that your complainant is right in saying
> that nobody else wants me on the frequency. I am not going to bore
> you in this letter with the details about why he's wrong about that,
> but I will say that (as usual?) you just don't know what you're
> talking about! If we go to a hearing before an ALJ, I am going to put
> on a lot of testi-mony about this issue, since this seems to be the
> most important question in your mind and, again, I know a lot more
> about the facts on this issue than you do, and you're going to lose
> because your complainant is giving you the wrong infor-mation! In
> short, my position will be that your complainant is wrong and
> self-serving, and your conclusion that everyone else on frequency
> wants me to go away is extremely slipshod, superficial and merely
> another example of your poor enforcement work (i.e., your failure to
> properly analyze the pertinent issues). In reality, there are
> probably 10 stations on frequency, and only one of them (your
> complainant) wants me to go away. Why let that one station
> dictate to whom the other 9 can talk? And do you know what else?

> Even if all ten of the other amateurs on frequency wanted me to go
> away, I still wouldn't be required to go! The issue of who wants me
> to go away and who doesn't is really irrelevant, since I have the
> right to use the frequency and they do not have the legal right to
> tell me otherwise. Do ten licensed drivers have the right to tell
> another driver he can't use the road, just because they don't like
> him? Of course not! He has the right to use the road, regardless of
> what the other ten drivers might desire. The exact same principle is
> involved here. I am specifically licensed to use the frequency, and
> my fellow amateurs have no greater right to use it than I do. If they
> attempt to run me off, then they're the jammers, not me! Again,
> Riley, you're simply on the wrong side of this case! You should be
> supporting me!
>
> While we're on the subject of "facile and fatuous", I must say
> that I am also really offended by your rather obvious attempt to lump
> together my
> transmis-sions on 3820 and 3830 as somehow being identical in nature,
> or as constituting some sort of pattern of bad conduct. Again, you
> just don't know what you're talking about! I will win on the facts at
> a hearing on this issue because both situations were entirely
> different, and I know how they were different and you don't! Entirely
> different stations, times and conversations were involved in each of
> the two frequencies, and your attempt to distort the facts and
> prejudice the Commis-sion against me by trying to lump them together
> as some kind of nefarious "pattern of conduct" is certainly rather
> gratuitous and unappreciated by me, to say the least! Please rest
> assured that I'm not going to let you do that at a hearing!
>
> None of the activities prohibited by §97.113 appear. There are
> none of the usual indicia of any rules violations. This must already
> have occurred to you. You have an extremely weak case on the face of
> it, since you can point to no specific §97.113 violation. In view of
> the absence of any §97.113 violation, are you trying to tell me that
> an ALJ is somehow going to magically conclude that I am interfering
> with another station, when neither can you show any actual
> inter-ference? I don't think so! Now I fully appreciate that you are
> going to try to claim that my transmissions were conduct, not speech,
> but you still have the same problem: none of my conduct violated
> §97.113, so the only possible reason for you to be trying to hand me
> this load of shit is because you are trying to limit my free-speech
> rights.
>
> You claim deliberate interference, but that is simply
> impossible. I never interfered with anyone on your tape because I
> have never operated that way. I always try to be courteous, and I
> always stand by to listen to other stations after I am done making
> brief comments in the roundtable QSO. I don't engage in monologues,
> nor do I try to monopolize the frequency. You can't prove any actual

> interference, which is the sine qua non of deliberate interference,
> because there simply wasn't any, and I really resent your apparent and
> unfair implication that you can, because I'm a good operator! If you
> claim actual interference, then I want a hearing before an ALJ over
> the issue, because I'm afraid your admitted insanity is indeed
> permanent! I just don't have to take this kind of abuse from you, and
> I have no intention of doing so! I have done nothing wrong, so who
> made you God? I would be perfectly content to go to a hearing over
> the issue, if you won't start thinking more clearly and back down.
>
> Have you ever heard of the de minimis doctrine? I mean, what
> are you really saying: that I somehow injured your complainant's
> sensibilities so very badly with something I said on 3830 that he has
> the right to bar me from the
> frequency entirely as a result? (It wouldn't be the first time he has
> tried to drive other stations off the frequency, you know!) Isn't
> that known as the "princess and the pea" school of Rules enforcement?
> If you want to play the "princess" before the ALJ, Riley, then Gawd do
> I ever want to go to a hearing! It would be worth it just to watch
> you make a fool of yourself, "Princess", even if I wound up losing! I
> really want to see you explain to an ALJ what I did that was so
> terrible, "Prin-cess"! Just be sure to bring your tu-tu and ballet
> shoes so you can appear in proper uniform, primadonna! I'm not being
> facetious at all about this point, Riley. As you know, all attorneys
> are required to show due and proper respect to the courts, and if you
> and the U.S. Attorney show up at the administrative hearing in suits
> and ties, I am going to argue that you are attempting to seriously
> mislead the ALJ by falsely attempting to appear to be attorneys and
> civil
> servants when you are really nothing but a bunch of princesses,
> because the
> "princess and the pea" is the entire theory of your case, and you
> should be required to act accordingly! And I am going to move for a
> continuance on
> that basis, until you guys go home and change into your princess
> costumes. I'm just not going to let you mislead the court by trying
> to pretend that you're not really princesses and are instead normal
> people. In fact, as I write this, I'm starting to think that
> "Princess" is really a good nickname for you, Riley! Therefore, I'm
> going to start referring to you by that nickname hereafter in this
> Response.
>
> Your complainant hasn't suffered any injury whatsoever! I didn't
> force him to go away, as he is trying to force me to do! The remedy
> you propose is entirely dispro-por-tionate to the claimed "offense",
> and from the Senate's failure to convict Bill Clinton in the
> Monicagate impeachment we discovered that you don't impose a
> disproportionate punishment for matters which are essentially private
> affairs, didn't we? Since our QSO on 3830 was a purely private

> conver-sation, as a good Democrat you want me to be able to benefit
> from the same principle that saved your President from impeachment,
> don't you? After all, if President Clinton can repeatedly get blow
> jobs from Monica Lewinsky in the Oval Office and it is considered
> purely a private matter, then certainly I can engage in a little
> argu-men-tation with my fellow hams on 3830, if that is what has got
> you in such a tizzy, Princess, and it should likewise be considered to
> be purely a private matter.
>
> And what, exactly, is the reason for your secrecy about your
> so-called "monitoring evidence"? I mean, what would have been so hard
> about your sending me a copy of that tape and asking for my reaction
> to it, prior to issuing your Warning Notice? You still could have
> sent me a Warning Notice if I failed to adequately explain my
> transmissions on the tape. Were you afraid I would contradict the
> tapes, so you wouldn't be able to jump down my throat? Do you have
> something to hide? Are we playing discovery games? And now you ask
> me for a "complete and candid response" to your Warning Notice, on
> pain of further prosecution under §308(b) if I am not "completely
> candid", yet you won't even let me hear the tapes so I can reply to
> them candidly? Are you deliberately trying to keep me guessing about
> what you have on tape so you can claim I'm not being candid and go
> after me under §308(b), or what? Why in the world would you tell me I
> have to be "candid", and then make me guess about what I'm supposed to
> be candid about? That is a really shitty thing for you to do,
> Princess!
>
> Another essential element of my defense to your Warning Notice
> is that, even viewed in a light most favorable to the Commission, it
> amounts to nothing more than that you are complaining about your own
> lack of enforcement over the last 20 years! Princess, you of all
> people well know that we hams look to the reported decisions and your
> warning letters for guidance about our conduct, but for the last 20
> years you have deliberately engaged in the rather deceitful practice
> of pretending or claiming to have enforcement powers under Part 97
> that you clearly did not have, but instead telling hams to be
> self-policing! In other words, you've been perpetuating a lie based
> upon a lie! You've been falsely telling hams that you have
> enforcement powers you don't have, and then turned around and falsely
> told them that you weren't going to do any enforcement and that they
> had to be self-policing instead. You've adopted whichever of these
> false and
> contradictory positions happened to serve your interests at the time!
> You've
> compounded your deliberate mis-statements over a 20-year period! You
> did
> this because you knew damned well that you didn't have the enforcement
> powers you were claiming to have, so you had to let hams solve their
> own problems (i.e., be self-policing) instead. But that cop-out sure

> didn't prevent you from lying about the enforcement powers you claimed
> you did have! By God, Princess, that's just so despicable!
>
> As the direct result of your failure to do your job over the last
> 20 years, and as the further direct result of your compounded
> duplicity, as pointed out above, hams have not had the benefit of any
> developing law in order to guide their lawful conduct under Part 97!
> Instead, the Commission has engaged in the extremely dis-in-gen-uous
> practice of pretending that hams have no free speech rights under some
> alleged Part 97 "free speech no-man's land" where the Commission
> wrong-fully claims to have the right (usually ?97.1 is cited, as
> discussed above) to censor amateurs' speech that doesn't otherwise
> violate ?97.113 under the guise of "good amateur practice", while all
> the time the Second Circuit Court of Appeals was telling you that you
> didn't even have the right to regulate amateur radio at all(!) under
> the old Part 97, and the Commission was therefore forced to amend Part
> 97 in 1989 to give itself the power to enforce the Rules in the first
> place! Did you think nobody noticed that or something? And aren't
> you ashamed of yourself for continuing to work and associate with such
> a bunch
> of liars?
>
> And ever since Part 97 was amended in 1989, you've been playing
> nothing but games with ?97.101(b), which was first enacted in those
> 1989 revisions! Now ?97.101(b) requires all hams to cooperate in
> sharing their assigned frequencies in order to make the best use of
> them, and further says that no ham has a preferential right to use any
> frequency, but in my case you're acting like ?97.101(b) doesn't even
> exist! Your complainant simply doesn't want to share the frequency,
> as he is required to do under ?97.101(b)! In other words, Princess,
> you should be on my side, not the complainant's! You are basically
> saying with your Warning Notice that you are going to give your
> complainant a preferential right to use 3830. Yet in other of your
> warning notices, you have relied on ?97.101(b) in threatening to
> punish hams for doing exactly the same thing your complainant is
> trying to do to me (see, for example, your November 16, 1999 Warning
> Notice to licensee Alan Strauss, WA4JTK. There are several other
> similar such Warning Notices from you in the RAIN Report).
> Furthermore, even before the enactment of ?97.101(b), the Commission
> revoked amateur licenses for not sharing frequencies in ways which, I
> believe, are highly-analogous to the way in which your complainant is
> refusing to share 3830. Plageman v. FCC (1984) PR Docket No. 84-531;
> File No. PR-2923-S and Ballinger v. FCC (1984) PR Docket Nos.
> 84-291and 84-292; File No. PR-2875-S. Certainly my argument, that
> your complainant must be required to share the frequency is, a
> fortiori, much stronger since ?97.101(b) first took effect in 1989
> than it was at the time Plageman and Ballinger were decided, yet even
> the
> pre-Amendment cases support my position rather than yours! You'd

> better check yourself out in a major fashion, Princess! You're
> clearly wrong on the law!
>
> In short, Princess, when this situation was first raised with me
> by the ham who I believe is your complainant, I carefully researched
> the law in good faith concern-ing the subject and tried to govern my
> actions accordingly but, due to apparent deliberate Commission action,
> I experienced great difficulty in ascer-tain-ing with any clarity how
> Part 97 governed the dispute. First I found your warning notices on
> the RAIN Report, saying that under §97.101(b) we have to share the
> frequen-cies, and threatening punishment if the objecting station
> refused to share, exactly as your complainant is doing herein. Then I
> found the Plageman and Ballinger decisions and saw how the Commission
> revoked the licenses of those amateurs because they refused to share
> the frequency, even before §97.101(b) was enacted! Of course, I
> really wanted to comply with the Rules, because I value my license.
> Because I was very confused about the state of the law on this issue
> after seeing how you were playing enforcement games, I attended a
> meeting of my local radio club, to which I belong, because my SCM,
> Jettie Hill, was going to be speaking, and I had heard that he was
> something of an expert on Part 97. I told Mr. Hill after the meeting
> that I was really confused about the meaning of §97.101(b), especially
> in light of your rather inconsistent enforcement actions, and how you
> appeared to be pretending that the law was something different than it
> actually is, and asked him what he thought. He said "nobody knows".
> Now with your inconsistent and non-existent enforcement, the Plageman
> and Ballinger cases, the plain text of §97.101(b), the fact that
> §97.101(b) was enacted after Plageman and Ballinger, and my own SCM
> telling me that "nobody knows", of course I would think I had the
> right to stay on frequency under those circum-stances! Why would
> anybody in his right mind think he had to change frequency under
> §97.101(b), your warning notices, Plageman, Ballinger, and when even
> his SCM doesn't know the answer? And now you're taking exactly the
> opposite position! That's not fair, and it's dis-in-gen-uous,
> Princess, and you're trying to make me pay the price! And I don't
> like it! And it constitutes a full and complete defense to any
> enforcement action that you might bring against me! You want to have
> it both ways, but I don't think an ALJ is going to let you. You want
> to use §97.101(b) as a weapon when it suits your interests, but you
> want to deny its existence when, as in my case, it becomes
> inconvenient for you to acknowledge! And to top it all off, you're so
> damned arrogant and condescending about the way you do it! If you're
> an example of what Al Gore's "reinvented government" is going to be,
> then God help us! (Again, all of this goes to the issues of your
> competence, integrity and
> credibility.) You act as if nobody else can figure out the
> commun-ications law but you, and you try to take unfair advantage of
> your (allegedly) somewhat exclusive and rather extensive knowledge
> about the subject. Well, you messed with the wrong guy this time,

> Princess, because, you see, I really have nothing to lose. I'll fight
> it all the way out with you, if you have nothing better to do with
> your time. Hell, after the IRS gets through with me, I have more time
> than money anyway! But don't you have any worse actors than me to
> pursue? After speaking to you on the telephone the other day, when
> you told me the hobby has become nothing more than a "taping contest",
> and that I'd better come up with some tapes in my own defense to
> counter those of your complainant, I don't really care that much if I
> lose my license, if that's what our hobby has come to. But I don't
> think it has, and I value my license, so I am going to fight your
> Warning Notice as far as I can.
>
> Another real joke is the way you are claiming the one-sided
> tapes, provided to you by some other ham with an axe to grind,
> constitute "monitoring evidence". Gee, that term, "monitoring
> evidence", really makes your Warning Notice sound official and
> condemnatory, doesn't it? But whom are we trying to kid here,
> Princess? I mean, I know it sounds very impressive for you to claim
> you have "monitoring evidence" in your press release, but monitoring
> evidence must be developed by the Commission, not another licensee! I
> am going to object to the introduction of your so-called "monitoring
> evidence" into evidence at any admin-istrative hearing, Princess, on
> the basis that it is not relevant, not material, biased, prejudicial,
> possibly doctored (you simply don't know if was doctored because you
> can't prove the tape's chain of possession, as you are required to do
> at an administrative hearing) and does not rise to the level of legal
> monitoring evidence because the Commission did not collect it. Also,
> your procedure of accepting tapes from amateurs with an axe to grind
> violates the Hatch Act, and they are therefore inadmissible on that
> separate ground, Princess. As usual, you're simply overstating your
> case, trying to make your job easier and trying to pander to the
> brownshirts, but you've chosen the wrong boy to try to victimize this
> time, Princess! If you want to develop monitoring evidence, develop
> it yourself, as you are required to do! Do your job rather than
> sitting around writing up bullshit Warning Notices!
>
>
> Princess, what in the hell did you expect was going to happen
> after the Commission failed to do its job for 20 years and then
> suddenly hung out a "blink-ing neon light", in the form of one W.
> Riley Hollingsworth, announcing that "we're doing enforcement again!"
> Didn't you foresee that maybe, after 20 years of no enforcement
> whatsoever, maybe some snivelers with an axe to grind would send you
> some one-sided tapes in an attempt to get rid of somebody they don't
> like on the ham radio? And why in the world would you want to side
> with, or believe, the licensee/taxpayer who's a sniveler in that
> situation, rather than the licensee/taxpayer (me) who's not? Are you
> trying to encourage sniveling or some-thing? (On second thought, I
> guess that's what Democrats do, after all. Then they try to get the

> snivelers to vote for them by promising them relief from their
> self-imposed problems.) But if you're not trying to encourage
> sniveling, then maybe you'd better take down that "blinking neon
> light"! Princess, I've been jammed, and hams have tried to run me off
> frequencies, for years! It happens to everybody at one time or
> another. It's just that I don't go sniveling to you every time it
> happens, because I'm a big boy and I can handle it myself. And
> I'm not going to start sniveling to you now, either. (Actually, I did
> try complaining to then-Engineer-In-Charge Phil Kane in San Francisco
> one time about being jammed. He told me to take care of it myself,
> because hams are supposed to be self-policing, so I never bothered
> complaining again.) But please rest assured that, were I so inclined,
> I could tell you a bigger sob story than your complainant has done!
> But I would never do that. I'm simply not a whiner.
>
> And if you take me to hearing, then I'm going to argue that
> there is no "free speech no man's land" under Part 97; in other words,
> that you have no power to regulate the substantive content of hams'
> on-the-air speech (except for obscenity and threatened criminal acts)
> that does not otherwise violate Part 97, because I'm getting really
> tired of you wrongfully asserting this to hammer the poor licensee.
> But the problem with such a ruling, if I obtained one, is that neither
> of us would like it. (I wouldn't like it because it would mean that
> we don't have the right to run a drunk off the frequency until he
> sobers up, the very situation which, I think, gave rise to this
> dispute.) If I win, you won't have any power to regulate the content
> of hams' speech on the air. Is that really what you want? So I can
> either yell, "the emperor has no clothes" now, or it can await another
> day, and in the meantime we will see if you start taking a more
> even-handed, considered and judicious approach to enforcement. It's
> really up to you, Princess.
>
> And I find it really disconcerting that you are supposed to be
> an amateur
> enforcement specialist, and I am not even a communications law
> specialist,
> although you are supposed to be one, yet clearly I either have a
> better
> under-stand-ing of Part 97 enforcement law than you do, or else you're
> deliberately dissemb-ling and pretending that the law under Part 97 is
> something different than it really is, because it lets you make your
> job easier, issue more self-promoting press releases and keep the
> brownshirts happy. So at an administrative hearing I am basically
> going to require you to specify whether you issued my Warning Notice
> because you're incompetent or because you're venal. Man, Princess, I
> sure wouldn't like to be presented with a choice like that in front of
> an ALJ! I think a serious question concerning your integrity is
> involved with respect to your overall attitude toward enforcement.
> For example, why would you try to deliberately distort the law to

> unsuspecting licensees?
>
> Please retract your Warning Notice and issue a written apology to
> me for issuing it in the first instance. Otherwise, I am going to
> assume that you will issue some form of official Citation or Notice of
> Violation concerning the matter. Please be advised that in the latter
> event I wish to take the steps
> necessary for designating the case for a hearing before an ALJ. And
> if you do issue an official Citation or Notice of Violation, please
> also send me, at that same time, copies of all evidence upon which you
> are relying to prove same, including the so-called "monitoring
> evidence" that you are claiming to have. In the meantime, I will
> finish reviewing the details of your expense reports in the Federal
> Register. I do hope that you have found my Response to be adequately
> candid, Princess, and that you have not been terribly offended by
> anything I've said herein, or have found my Response to be terribly
> intemperate. It's just that I am a little paranoid that, had I not
> displayed the highest degree of candor in this Response, you might try
> to claim that I was thereby guilty of a separate offense under 308(b)
> of the Com-munications Act!
>
>
> Thank you for considering my position in this matter.
>
>
> Yours very truly,
>

> THE LIFE OF RILEY
>
> Or why Mikee 'Kalamazoo Cuckoo' ND8V was "in like Flynn" and continues
> to lead a charmed existence with Riley 'Rot' Hollingsworth K4ZDH
>
> Once upon a time in America there came to be a giant of an
> organization called the American Radio Relay League (ARRL).
>
> Much later, there appeared a shy and lonely radio amateur with the
> 'self-effacing' call sign K1MAN [HI, HI].
>
> Sometime, somewhere, somehow yet later K1MAN came to the rather
> obvious conclusion that large organizations/associations, such as the
> ARRL or the Federal Communications Commission (FCC), in time lose
> touch with the constituents they are supposed to serve. This was not
> news, in that it has always been so.
>
> Unlike others, who only 'bitched' about it, however, K1MAN decided to
> start a Bulletin service on 14.275 MHz a la the ARRL's W1AW in part to
> poke sticks into the respective eyes of both one-eyed Cyclops.
>
> Surprise, surprise, the ARRL/FCC did not put K1MAN on their respective
> Christmas card lists.... Rather, they attempted to shut K1MAN down.
> Years and much effort later, they appear to have failed, at least to
> the extent that K1MAN remains on the air.
>
> Concurrently and arguably partly as a result of K1MAN's so-called "bad
> example", a group of rogue Citizens Band (CB) operators with an
> amateur licence [and others without], decided to congregate on 14.313
> MHz which frequency in time became a veritable 'zoo'. This was during
> the time when the amateur spectrum was supposedly
> 'self-governing/policing'....
>
> Then, some four years ago the ARRL reportedly proposed and the FCC
> agreed to hire one Riley Hollingsworth K4ZDH as a 'radio cop', to
> clean up the 'amateur beat' generally. In reality, there were arguably
> only two items on Riley's immediate agenda: K1MAN on 14.275 MHz and
> the mess on 14.313 MHz but for the obvious and not so obvious reasons,
> very much in that order.
>
> Unfortunately K1MAN had in the meantime contracted to teach full-time

> and as a consequence had to take a sabbatical from producing the
> time-consuming Bulletins. Then, at a series of 'hamventions', Riley
> the radio cop apparently loudly took credit for driving K1MAN off the
> air.... This played well at the FCC and among the 'great unwashed' and
> uninformed in the amateur community and earned Riley the moniker 'The
> Rotweiler'. Predictably, this had the same effect on K1MAN as a
> scarlet handkerchief has on a bull. K1MAN consequently let it widely
> be known that he would be back with a vengeance and as they say in
> show business, the stage was set....
>
> In the meantime, Riley continued to ineffectively try to come to grips
> with the zoo on 14.313 MHz. ND8V a.k.a. 'Kalamazoo Cuckoo' to friends
> and detractors alike, was one of the chief rabble-rousers there. He
> had attacked Hispanic-speaking stations "for years" calling them
> cockroaches, interfered with a maritime mobile net and threatened--on
> and off the air--any number of amateurs who stood up to his bullying.
> Throughout this, Riley did virtually nothing. Then, when even the US
> military reportedly had enough of ND8V's behaviour and caused a search
> to be made of his station, Riley 'The Rotweiler' was finally forced to
> act. He severely beat ND8V up--with a 'wet noodle'--by supposedly
> suspending his High Frequency (HF) privileges for a curiously
> 'pregnant' nine months! This again played well at the FCC and even in
> the amateur community, to whom 14.313 MHz in general and to some ND8V
> in particular, had become such an acute embarrassment.
>
> Unfortunately, Riley had for some strange reason also made a 'Faustian
> bargain' with ND8V in part to the effect that if he behaved himself
> for the duration of the suspension, he would [surprise, surprise] be
> rewarded! All of his past sins were to be forgiven and forgotten--and
> what is most perverse--could not be used against him in subsequent
> disciplinary proceedings.... [Obviously, someone had turned their mind
> to the possibility--some say inevitability--of subsequent disciplinary
> problems. Who? Why?]
>
> Interestingly, as part of this Faustian bargain, Riley apparently
> forbade ND8V to operate on 14.313 MHz--something he may not have had
> authority in law to do. But what is truly odd, when ND8V returned to
> HF--surprise, surprise ~a month before K1MAN's published intension to
> resume his Bulletins--he relocated to 14.275 MHz! With virtually the
> entire 20 m Band for ND8V to choose from, this was not entirely
> serendipitous....
>
> ND8V returned to HF in September 2001 after 'serving' only eight of
> the nine month suspension [Riley can't count] and virtually
> immediately was [surprise, surprise] back in trouble again. Riley was
> again forced to use the wet noodle, i.e. to issue another Warning
> Letter that, for reasons still unclear, but likely related to the
> Faustian bargain, appears to have again 'gone away' without
> significant or indeed any consequences.

>
> Immediately upon K1MAN's return, he was [surprise, surprise] subjected
> to organized and vicious interference (QRM) by ND8V and his toadies
> from the zoo on 14.313 MHz now increasingly congregating on 14.275
> MHz. [Interestingly, most of these were/are from the 4th Call
> District.] Riley/the FCC reportedly sat back and listened, but
> pointedly took no action. Curiously, however, between this relentless
> QRM'ing and otherwise bad mouthing of K1MAN and
> inconvenient/neighbouring others, ND8V could be heard loudly praising
> Riley--in nauseating fashion--the just completed suspension and by now
> extensive 'rap sheet' at the FCC and elsewhere notwithstanding....
> Things were getting curiouser and curiouser....
>
> Within yet another month or two, ND8V organized another attack, this
> time on a Polish-speaking amateur from New York City (the New Yorker),
> on the neighbouring frequency of 14.273 MHz for in effect usually
> speaking in a foreign language and being too close to "his" newly
> chosen frequency. Now, 14.273 MHz had for only some fifty years
> unofficially been known/used as the worldwide 'Polish Calling
> Frequency'. For the obvious reasons, many consider such informal
> arrangements a very effective and efficient use of the radio spectrum.
> But, this was shortly after "9/11" and ND8V's apologists say that he
> should be forgiven for this misguided sense of 'American patriotism'..
>
> Surprise, surprise, this attack on the sometime Polish-speakers
> generally and on the New Yorker in particular had a similar modus
> operandi (MO) to that used a year earlier on the Hispanics! ND8V also
> in quick succession organized his toadies from 14.275 MHz to write two
> transparently fictitious complaints to Riley against the New Yorker.
> Perversely, these involved allegations of 'perceived' overly-wide
> signals and interference no less, backed up by the 'thinnest' of
> malicious 'drivel' off the Internet. One concerned chiefly what were
> clearly fraudulent rebroadcasts of the New Yorker's CQs [they taped
> and retransmitted his signals on top of their own and then complained
> to Riley about it!]. To even casual observers, this was/is the
> well-known MO of CB'ers and together with voice imitations, was/is a
> recognized specialty of the zoo in general and ND8V in particular. As
> such, the complaints were an obviously 'put up job'.
>
> Nevertheless, without checking the bona fides of the complaints or
> their chief instigator/organizer, or apparently doing any independent
> investigation whatsoever, Riley obligingly quickly issued two Warning
> Letters in succession to the New Yorker. These were then published on
> the ARRL website. This was/is Riley's standard operating procedure.
> Several knowledgeable and legally trained observers have aptly called
> this approach to enforcement "Trial By Press Release". [The ARRL's
> by-and-large noble institutional memory should be ashamed to be party
> to this.]
>

> These Warning Letters emboldened ND8V who was then openly heard
> bragging to his toadies that he would drive the sometime
> Polish-speakers off the neighbouring frequency in general and the New
> Yorker off the air in particular.
>
> Then, two of the sometime Polish-speakers on 14.273 MHz [one American
> and one Canadian] stepped into the breach and attempted to defend
> their fellow amateur..
>
> Initially, first the American and then the Canadian helped the New
> Yorker draft and send three lengthy and increasingly detailed
> double-registered letters of reply to Riley--not one of which to-date
> has even been acknowledged!
>
> The American then sent a double-registered letter covering an
> audiotape evidencing malicious QRM and a death threat to the New
> Yorker uttered by none other than--surprise, surprise--'Dumbo Bobbie'
> WD4AWO--one of the original complainants and ND8V's regular toady from
> the backwoods of Tennessee. For some curious reason, Riley has not
> to-date deigned to acknowledge this serious incident either..
>
> Over the next several months the Canadian followed up with some 20
> detailed e-mails, each one evidencing at least one instance of serious
> malicious QRM by ND8V. After several insistent prompts Riley finally
> laconically if inarticulately acknowledged some of these--not to be
> confused with answering them--but of course he did nothing substantive
> about them as usual..
>
> Then, after about six months of this benign neglect--and worse--and
> the continuing vicious attacks by ND8V, Riley finally attempted to
> placate the increasingly irate Canadian by advising that he would hold
> a review of ND8V's licence status at his upcoming renewal time.
> Inexplicably, however, a couple of months later, Riley/the FCC renewed
> ND8V's licence without any review whatsoever! When confronted about
> this by the Canadian, Riley professed utter surprise and blamed the
> supposed error on some administrative 'foul-up'. Others thought/think
> otherwise..
>
> Then, after nearly a year of inaction and 'flip flops', the Canadian
> finally read Riley the 'riot act'..
>
> Riley's reply to this 'dressing down' was apoplectic, but informative
> for a change. He wrote that the Canadian should not bother him with
> "blow-by-blow" details--each one carefully crafted as a possible
> exhibit to any number of affidavits! Riley also stated that he had
> "just noticed" that the writer was a Canadian amateur!! This, recall,
> after more than 20 e-mails, all except one of which [a forward from
> the American] were very clearly identified with a Canadian call
> sign!!! The logical conclusion to be drawn from this is that Riley is

> either grossly inattentive to detail and/or that he doesn't recognize
> a Canadian call sign when he sees one some 20 times in succession
> and/or that he is disingenuous [for those not familiar with the last
> word, look it up under "L" in the dictionary]. Irrespective, Riley
> thereby very arguably proved himself to be unfit for the important
> position that he holds..
>
> In his reply, Riley also unilaterally changed 'the rules of
> engagement' in mid-stream and suggested that the Canadian send him
> audiotapes instead of the blow-by-blow e-mails. It is interesting to
> note in passing that the form of complaint to the FCC is nowhere
> specified. In fact, an FCC Commissioner had shortly before this
> delivered a 'rocket' to the Enforcement Bureau [of which Riley is
> Special Counsel, you might recall] on this very point. Also, there are
> serious and possibly insurmountable evidentiary problems with tapes
> made by 'various and sundry'.
>
> Nevertheless, the Canadian subsequently sent Riley a detailed letter
> covering a tape recording of a typical example, among others, of
> ND8V's usual sociopathic QRM. This incident was even independently
> corroborated by a station from California--which was 2 kHz down and
> was contemporaneously also maliciously QRM'ed by ND8V--and luckily
> caught on the same tape! Despite this 'double whammy', from two
> independent sources that did not previously know each other, Riley
> never replied to the Californian [a retired Sergeant of police,
> incidentally] and only grudgingly acknowledged the 'pesky' Canadian.
> But, to-date, he has taken no substantive action on the incidents as
> usual..
>
> All the while ND8V perversely continued to praise Riley on the air as
> if he were his 'long lost bud' and bragged about unprecedented access
> to and sometimes daily telephone contact with him [while practicing
> attorneys regularly could not get through].... To subjective and
> objective observers alike, things were not only getting curiouser and
> curiouser, but increasingly bizarre....
>
> Then on 25 November 2002 Riley wrote ND8V an unprecedented strong
> Warning Letter noting that the FCC continues to receive complaints
> about him concerning the ".appropriation of certain frequencies." and
> ".interference to certain operators". Riley inter alia cautioned that:
> "Any future incidents.even a single incident, will result in a
> monetary forfeiture and revocation proceeding against your license"
> and requested that ND8V refrain from operation on the 20 m Band. This
> unprecedented '.last warning, to last warning, to last warning,
> etc....' was again based on multiple, independent and well-founded
> complaints from several amateurs operating tens of kHz apart. At least
> two of these complaints were from mature, highly credible and wholly
> independent sources who did not then even know of the other's
> existence [but Riley obviously knew--and gave both the "mushroom

> treatment"]. Interestingly, both of these sources were also legally
> trained.. Moreover, one of the complaints was in addition reduced
> to/backed up by a very persuasive/extensive Statutory
> Declaration/Affidavit..
>
> Surprise, surprise, distressingly similar historical fact patterns and
> well-founded/drafted independent complaints notwithstanding, ND8V was
> able to dispose of them via only one "private" telephone call to his
> 'bud' Riley! Therein, in true sociopath style [aided by his "calm
> voice characteristics" no doubt--ND8V later bragged about this
> on-air], he simply described the multiple independent and unconnected
> complaints to Riley as "all lies". Now Mikee is an accomplished
> practitioner of 'The Big Lie' approach. But, what is nevertheless so
> inexplicable and bizarre in the circumstances is that Riley obviously
> 'bought' this preposterously 'thin' excuse!
>
> STOP PRESS!
>
> SPECIAL COUNSEL RILEY 'ROT' HOLLINGSWORTH K4ZDH AGAIN SNOOKERED BY
> 'CALM VOICE CHARACTERISTICS' OF MIKEE 'KALAMAZOO CUCKOO' ND8V..
>
> After receiving such 'unimpeachable evidence to the contrary' from
> ND8V--Riley then shamelessly rescinded the Warning Letter--before it
> was even published!!!
>
> This again of course only emboldened ND8V who then sold his perfectly
> serviceable FT-1000D and bought an IC-756 PRO--so as to more
> effectively 'keep watch' on and 'splatter' the sometime
> Polish-speakers especially, in what he instructively called "War
> Mode". Subsequently, according to ND8V and his toadies, 14.275 MHz and
> vicinity was "always occupied", even when no one was using it! ND8V
> published a "schedule" to that effect on QRZ.com and anyone--but
> especially the sometime Polish-speakers--attempting to use any
> frequency between ~14.270 MHz and ~14.280 MHz would then immediately
> be 'stomped on' and/or [surprise, surprise] loudly and perversely be
> accused of interfering with him!
>
> If a few of the sometime Polish-speakers [eventually there were only
> two!] could not thus be chased off and stood their ground, ND8V would
> then threaten them with being reported to his "friend and lawyer",
> Riley. For effect, he would even occasionally pass out Riley's
> direct/private telephone numbers! He also repeatedly threatened the
> Canadian with a report to Industry Canada (IC), the Canadian
> equivalent of the FCC [and equally ineffective]. All the while ND8V's
> regular toadies [chief among them 'Rambo Dan' W4NTI, 'Dumbo Bobbie'
> WD4AWO, 'Rude Rube' K4RUB and 'Miami Boob' W4ASX to partially name
> only a few of the more unbalanced and guilty], were ready and more
> than willing in the background to uncritically back him up in whatever
> he said or did.. Soon, no one--'rednecks' from the 4th Call District

> and/or ND8V's usual sycophants excepted--was safe in the middle of the
> 20 m Phone Band! All the while Riley/the FCC and even IC, despite
> being repeatedly advised, did nothing..
>
> The American subsequently sent Riley another handful of
> double-registered letters covering some dozen tapes/instances of
> serious malicious QRM by ND8V. But of course Riley did not acknowledge
> this considerable effort and expense either..
>
> Then in February 2003 ND8V together with his toadies organized a
> series of vicious on-air attacks on the two sometime Polish-speaking
> holdouts. That these attacks were also premeditated, organized and
> racially/ethnically driven is beyond question. Several amateurs and
> even a short-wave listener independently reported ND8V and his toadies
> 'laying in wait' and preparing for them as such. The attacks were on
> an unprecedented scale and of ferocious intensity. Many of them
> literally lasted for hours! Some again involved repeated threats of
> death and/or bodily harm..
>
> Fortuitously, all of these attacks were taped--including the
> all-important beginnings--b othbytheAmericanandtheCanadian.This
> should have 'put paid' to 'who was on first, first and who second',
> who attacking and who defending, who calling whom racial/ethnic slurs,
> who threatening, etc. Riley/the FCC [and sometimes IC] were
> contemporaneously informed and on occasion provided the tapes and/or
> access thereto.
>
> But again, nothing constructive materialized--actually, quite to the
> contrary..
>
> Surprise, surprise, 'Kalamazoo Cuckoo' ND8V and 'Rambo Dan'
> W4NTI--those paragons of American radio amateur virtue--verbally

> Sure it is, Jim!
>
No, it isn't.

Suppose some nonham "had a hand in creating" the cell phone, or the
802.11G modem, or the RF ID tag reader used on containers, trucks and
railcars, or a host of other things. Does that *technical* achievement
somehow make him/her the most qualified person to set the rules and
regs in *amateur* radio?

> Lennie has insisted that his "professional" career was far more productive
> and useful than anything Amateurs do.

Where did he do that?

What I have seen is numerous verbose listings of his employers, and
projects he was part of. That's all.

> I want to know WHAT it was he thinks he
> did that is so useful? What is in my home or what do I use on a daily basis

>
> From the opinions of someone who knew him and worked in the same facility
> as he.
>
OK - let's say, just for the point of discussion, that your source is
right on the money.

That only covers one time period at one facility. Len tells us he has
worked a lot of places over a long period of time. One
less-than-stellar job does not a career ruin.

> >Besides - it's not the issue.
>
> It is as long as Lennie keeps trying to throw his "professional" weight
> around.

No, it isn't.

> He claims he's a hotshot, but I know of at least one other TRUE
> professional says otherwise.
>
OK, fine. But again, that's not the issue at all. Here's why:

There's a certain argument that begins with the arguer citing his accomplishments in non-amateur radio and electronics. Then these accomplishments supposedly qualify the arguer as being more qualified to set policy than others - including hams who have much more *amateur radio* experience. The argument is put forward even when the arguer's experience has little or nothing to do with what hams actually do in amateur radio.

In Len's case we have an extreme example:

He's never had an amateur radio license
Never worked as any sort of licensed radio operator in any other radio service
Never been involved in radio regulatory matters other than writing voluminous comments to FCC,
Never manufactured or designed any equipment for hams
Hasn't written an article or done a visible project in amateur radio circles for more than 22 years

And by his numerous mistakes in his postings here, doesn't really know that much about what hams actually do on the radio in the first place. (Note his continuing non-understanding of why phase noise is an issue for HF hams).

Yet he tries to tell us that his professional background somehow makes him more qualified than to determine *amateur radio* policy than any of us hams.

It would be like me, a male non-golfer, saying that I know best how the LPGA should be run. Or that the folks who run the cruise ships should determine policy for sailboats.

The entire argument is faulty. It's not an issue of whether Len is/was a "hotshot" but rather how valid his arguments are. The rest is diversion and bafflegab.

It would be like me, a male non-golfer, saying that I know best how the LPGA should be run. Or that the folks who run the cruise ships should determine policy for sailboats.

The central issue is whether his proposed changes would help or hurt the ARS. I say they would hurt the ARS.

Very familiar routine, I always (make myself) balk at jumping on
pricey impulse buys no matter how much I just have the have the thing.
Whatever it might be. I've lost "deals I couldn't refuse" to others
who didn't hesitate and won some by going home and thinking it thru
first like your WB3 did.

> trip!

You did "know" me then, it was just a year or so ago but I didn't get
into it here. I had a lotta stuff but most of it had nothing to do
with radio. Household goods, lumber, leftover home handyman crap,
clothing, obsolete office machinery, darkroom "treasures" and beyond.
A photo-freak nephew carted off my big Kodak Model A enlarger . . I
have no idea how old it was, probably came out of the 1930s. "Good
luck with that clunker Tim!" . . . poof: gone: wunnerful.

With a few exceptions the radio stuff was really ancient,
uninteresting junque not worth anything to anybody except to a rare
Miccolis type or two. He never got anywhere near the few goodies which
are not junque like the meatball Collins rcvr., the R4B, the 2M gear,
the TNCs, HTs etc. which I still have. You wouldn't have bothered
hauling off any of the crap he glomed.

Believe me, you'd have been really disappointed if you'd done a
600-700 mile overnighter round trip for that non-event.

Woulda been one helluva yard sale though.

> > dumpstered but I'm not losing any sleep over it. I did my kids a

> ...or they'll put it on ebay and smile all the way to the bank.

They'd have to know how to handle used ham gear via e-bay and they
don't. I'll direct it to Handi-Hams or the technical high school club
in Brooklyn or to the ARRL or to the FRC or sumpthin' like that which
they can handle. And get their inflated tax deductions. They
understand that "method" and will smile all the way to the bank.

> a Novice on 40 and 80m.

Those 21 Mhz TV IFs came along about the same time the 15 meter band
was opened to ham radio. Bordered on an engineering scandal. So then
they moved the TV IFs to 42 Mhz to get away from the hams. As if 15M
ham ops don't pump out harmonics. Welcome to the '50s techo geniuses
at the IEEE, the EIA, RCA and the FCC . . .

Amateur Radio Newsline™ Report 1417 October 8, 2004

Amateur Radio Newsline report number 1417 with a release date of Friday, October 8, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. A New Jersey radio club makes a big donation to the local community and hams in Great Britain may get more privileges on 40 meters. These stories and more on Amateur Radio Newsline report number 1417 coming your way right now.

(Billboard Cart Here)

**

PUBLIC SERVICE: RADIO CLUB DONATES $400,000 TO NJ PARK

A radio club has donated $400,000 to Essex County, New Jersey. This, to pay for renovations already made to Irvington Park where the club has its headquarters. And there's more money on the way. Amateur Radio Newsline's Henry Feinberg, K2SSQ, has the rest of the story:

--

According to a story in the September 29th edition of the Newark Star Ledger, the $400,000 donated by the Irvington Amateur Radio Team came from the states Green Acres program. It will be used to pay part of the $1.1 million in renovations that included new tennis courts, basketball courts, benches and a track.

The club, a nonprofit organization that volunteers as keepers of the park. It is expecting another $500,000 in Green Acres funds to pay for the second phase of the parks upgrade. Phase I of the $2 million overall was completed during early summer. Phase II, scheduled to begin next year, will include a second floor addition to the field house, where the radio club has its headquarters.

Phase I was completed during early summer. Phase II, scheduled to begin next year, will include a second- floor addition to the field house, where the radio club has its headquarters. The funds obtained by the club have been matched by Essex County.

Charles Freeman, N2JGC, is the clubs president. He says that the park renovations have boosted community pride.

--

Freeman: "Its all volunteerism. Its a bunch of wonderful people who dedicate their time and service to I-ART - the Irvington Amateur Radio

Team, the Office of Emergency Management, CERT, and any way we can get involved in helping out our community."
--

Feeeman says that this has helped get some of the children off the street by getting them involved in computers and amateur radio.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ.

--

The club brought its headquarters to the park in 1998. Soon after, members became the primary caretakers of the facility. (Star-Ledger, ARNewsline(tm))

**

RESTRUCTURING: VICTORIA VK HAMS LOOSE LOWER HALF OF 70CM

The bottom half of the 70 centimeter band is no longer available for amateur radio in most of Australia's Victoria state. This, as the result of a new exclusion zone that has just become law. W-I-A reporter Jim Linton VK3PC explains:

--

The ACA has prohibited all amateur radio activity on the 420-430 MHz band within Victoria in an area of up to a 250 kilometre radius of the Melbourne General Post Office. That band will now be used for a new state-of-the-art digital radio system to replace the current analogue systems of the Victoria Police, Metropolitan Ambulance Service and Metropolitan Fire Brigade.

The exclusion zone has been anticipated and comes after other permanent Exclusion zones were imposed for similar purposes around Perth and Sydney, including the Australian Capital Territory. The band 420-430 MHz has been used for amateur fixed links and amateur television. The WIA has assisted with the timely closure and migration of those links in Victoria in liaison with the Bureau of Emergency Services Telecommunications and the ACA.

The new digital voice and data radio system now being installed for Emergency services will also provide common coordination channels to support multi-agency response to major incidents and events. The aim is to have it fully operational well in advance of the Melbourne Commonwealth Games in 2006. This has been

Jim Linton VK3PC for WIA National News.

--

Where else the A-C-A will impose these exclusion zones is not known as we go to air. (WIA News)

**

RESTRUCTURING: MORE 40 METERS FOR UK HAMS

Meantime there is much better news coming from the U-K. That's where Ofcom -- the Office of Communications -- says that it might change the rules and give that nations hams more access to 40 meters. Jeramy Boot, G4NJH, is in Nottingham with more:

--

Ofcom is proposing to vary the Foundation, Intermediate and Full amateur radio licenses to permit UK amateurs to operate in the band 7,100 to 7,200kHz.

The band would be allocated to the Amateur Service on a Secondary basis, and would be available on the basis of non-interference to other services, inside or outside the United Kingdom.

Ofcom announced a one-month consultation period beginning on 23rd September and all license-holders are invited to make representations to this proposal in writing or by e-mail.

Jeremy Boot, G4NJH

--

The cutoff date for U-K hams to comment on this proposed Notice of Variation to the nations Amateur Service rules is October 23rd. (GB2RS)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the WB9AET repeater serving Chicago Illinois.

(5 sec pause here)

**

RESCUE RADIO: SATERN IN THE PUBLIC INTEREST

Ever hear of SATERN? Not the planet but a group of true helping hams that are always ready to serve the public need.

In our reports on the numerous hurricanes that hit the United States mainland the past few weeks we have often referred to several high frequency service nets. These include the Hurricane Watch Net, the Maritime Mobile Services Net and of coarse SATERN - the Salvation Army Team Emergency Network. You heard a lot of audio from the Hurricane Watch Net and the Maritime Mobile Services Net in our reports, but little of SATERN. That's because it was not really audible at our studio here on the U-S west coast. But we recently caught it being relayed on the Internet by K-A-4-E-P-S audio website and grabbed a few minutes of it in operation. Sometimes it takes nothing more than a referral to help out. Take a listen:

--

SATERN Net Audio. Hear it in the audio report at www.arnewsline.org.

--

Some of you may say that it sounds a little boring to just sit there hours on end, taking messages or directing people to a website. But that's an important part of the Salvation Army's job and the SATERN Net is one of its most important tools.

Major Pat McPherson, WW9E, explains it all on the SATERN website. He says that the Salvation Army Team Emergency Radio Network provides emergency communication support to the Salvation Army wherever needed. As a result, SATERN members have found themselves in tornadoes, floods, hurricanes, fires, aircraft accidents, bombings, earthquakes -- just to name the more expected types of emergencies.

In short, SATERN is not your ordinary radio club or net. Maybe not the most exciting to listen in on but it is ham radio in service to the public, at its very best. (ARNewsline(tm))

ENFORCEMENT: ENNIS COMMUNICATIONS IN $300,000 CONSENT DECREE

Turning to enforcement news, word that Emmis Communications has reached a $300,000 settlement with the Federal Communication Commission. This, after admitting that it broadcast indecent material on the airwaves.

Emmis owns 27 stations nationwide. The settlement comes in part from comments made by a nationally syndicated Chicago shock jock named Mancow Muller. Muller is an air personality at WKQX-FM and has been the source of every previous FCC fine issued to Emmis. To date that totals $42,000.

Besides the $300,000 payment, Indianapolis-based Emmis has also agreed to implement a company-wide plan intended to prevent future violations. (FCC)

**

ENFORCEMENT: ONE LAST CHANCE FOR K1MAN

The FCC appears to be giving Glenn Baxter, K1MAN, one final chance to strictly conform to the agency's Part 97 rules. This, before taking action against the Belgrade Lakes, Maine ham. The FCC's Daryl Duckworth, NN0W, explains:

--

Duckworth: "A warning letter went to Glenn Baxter, K1MAN, of Belgrade Lakes, Maine. Back in April of this year the Commission notified him of two areas of operation that would lead to enforcement action and / or designation for a hearing to determine his qualifications to remain

a licensee. This is regarding deliberate interference to ongoing communications and using the station for pecuniary interest.

Copies of the warning notice were also went to the United States Attorney in the United States Department of Justice, District of Maine.

This is Daryl Duckworth, NN0W, reporting."

--

In the September 15th Warning Notice the FCC's Riley Hollingsworth tells Baxter that the Commission has received approximately a dozen complaints that K1MAN Amateur Radio transmissions started on top of ongoing communications of individual operators, as well as on top of ongoing communications of the Salvation Army Team Emergency Radio Net. Hollingsworth says that this is a net that has been handling health and welfare traffic for this season's hurricane victims.

As to the pecuniary interest allegation, the FCC says that this is because Baxter's website lists a bulletin service transmission schedule and items for sale on the same pages. The FCC says that this is in violation of Sections 97.113(a)(2)and (3) of its rules.

Hollingsworth ends the letter by saying that failure to correct the violations will subject Baxter to enforcement action against his station and operator licenses. Baxter was given twenty days from the date the warning notice was issued to resoind. (FCC, RAIN)

**

ENFORCEMENT: FINE "KIND OF" REDUCED FOR GOOD BEHAVIOR

And a follow-up to a story we reported some time ago about a few unauthorized transmitters coming on the air in California. This, in 2003 around the time of Super Bowl thirty-seven. Amateur Radio Newsline's Bruce Tennant, K6PZW, is here with an update:

--

As listeners may recall, Global Radio, Inc. had requested that the FCC issue authority for it to operate on transmitters 89.1, 92.9, 93.7, 96.9, 104.1 and 106.9 Mhz. This, in conjunction with the Super Bowl thirty seven activities at Qualcomm Stadium in San Diego. T

he FCC granted operation on 93.7 and 96.9 Mhz under the call sign WN3XFL, but it specifically denied Global's request to use 89.1, 92.9, 104.1 and 106.9 Mhz. This based on possible interference to existing stations in Mexico and the U.S. as outlined under bi-lateral agreements.

But on January 26, 2003, an agent from the San Diego FCC field office was listening to the FM band. He observed that WN3XFL was active and operating, without authorization, on 88.98, 104.1 and 106.9 Mhz. This, in addition to its permitted operations on 93.7 Mhz and 96.9 Mhz.

Global's willful violation of its operating authority initially resulted in a fine of $12,000. In its reply, the company claimed it could not pay that amount but the Commission didn't buy that argument. Global also argued that its otherwise unblemished compliance record should be taken into account.

Well, the FCC did just that. Well, kind of. Because of the unblemished record, the Commission reduced the fine by $1200. If you do the math, that's now a fine of $10,800 that Global has been told it has to pay.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

THE HAM BUSINESS WORLD: A HEALTHY C3I

Turning to the ham radio industry, C3I says that it is not out of the ham radio business. In fact, following a short pause to reassess the current business climate, the concern is shipping out products and its business as usual according to company owner Owen Wormser, K3CB.

--

Wormser: "We are fully operational. We have built up a good stock of out standard antennas. We have taken special orders the last two weeks. So, we have been able to recover in about two to two and a half weeks time."

--

C3I is a unique company that manufactures printed circuit board modules, VHF, UHF and Super High Frequency, high-performance Yagi antennas and related accessories for the Amateur Radio and land mobile market. More information is on-line at www.c3iusa.com and look for a complete company profile with K3CB on an upcoming Rain Report. (ARNewsline(tm))

THE SOCIAL SCENE: TITUSVILLE FL. IN OCTOBER

Florida's North Brevard Amateur Radio Club will be among the first to begin celebrating the return of the good days following the hurricanes of 2004. This, as it announces that its Titusville Hamfest will be held on Saturday, October 23rd.

This year's venue is the Disabled American Veterans Chapter 109 building in Titusville. The event is open to the public from 7 a.m. to 2 p.m. Eastern time. More information is on the club webpage at www.northbrevardradioclub.org (Via e-mail)

**

THE SOCIAL SCENE: SAN DIEGO HAM RADIO ROUNDUP & HAMFEST

And on the West side of the country the San Diego Roundup and Hamfest hosted by ARRL San Diego Section takes place October 30th from 8 a.m. to 4 p.m.. The location is Hilltop Recreation Center on Ovieda Way at San Diego. For more information contact KC6NXZ by telephone at area code 619-561-6678 during normal business hours Pacific coast time. (Via e-mail)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

RALPH WRIGHT (MIKE RIVERS), W5JVI - S.K.

More sad news to report with word of the passing of Ralph Wendel Wright, W5VJI. Better known to his many fans as Mike Rivers, Wright dominated the airwaves at radio station CKLW from 1967 to 1970.

Wright suffered a cerebral bleed in May from which he never recovered. He passed away at his home in Antioch, Tennessee on Monday night September 13th.

In addition to being a top rated air personality W5JVI was also a gifted musician, jingle writer, a master at radio production and a very active ham radio operator. No public memorial service was planned. (W2JKD)

**

THE CHANGING OF THE GUARD: FRANK TUREK, DL7FT - S.K.

Also, noted D-Xpeditioner, Frank Turek, DL7FT, became a "Silent Key" on August 17th. Over the years Turek traveled to many rare locations to hand out new country contacts to many operators worldwide. He is survived by his wife Siegrid, DL7CN, who will be handling QSL duties and will continue to keep the DL7FT Post Office Box open. (OPDX)

**

NAMES IN THE NEWS: RAC LEADERS RESIGN FOR HEALTH ISSUE

Two key officers of Canada's national Amateur Radio Society have stepped down for health related reasons. According to an RAC bulletin issued on October 5th, President Daniel Lamoureux, VE2KA, and First Vice-president Bob Nash, VE3KZ have resigned after having been

hospitalized with heart related problems.

The bulletin says that the Radio Amateurs of Canada Board of Directors will convene a special meeting as quickly as possible. This, to deal with the vacancies created by these resignations. No date for the meeting has yet been announced. (RAC)

**

RADIO HEALTH: KOREAN RESEARCHERS CLAIM CANCER CONNECTION TO HIGH POWER RADIO TRANSMISSIONS

Korean scientists sat that they have found that regions near some A-M radio broadcasting towers show 70 percent more leukemia deaths than those without. This, according to Wired News which reports that the study, to be published in an upcoming issue of the International Archives of Occupational and Environmental Health, also found that cancer deaths were 29 percent higher near such transmitters.

Two years ago an Italian investigation found death rates from leukemia increased dramatically for residents living within two miles of Vatican Radio's powerful array of transmitters in Rome. The Koreans looked at the death rates in 10 regions with AM radio transmitting towers broadcasting at more than 100 kilowatts and compared them with control areas without transmitters.

The substantially higher cancer mortality in those who lived within two kilometers of the towers led researchers to conclude that more investigation was needed. However, they also said their study did not prove a direct link between cancer and the transmitters. (Published news reports)

**

HAM RADIO NEAR SPACE: A NEW ALTITUDE RECORD BY SIMSAT 1B

Pat Kilroy, N8PK, reports a new altitude record of over 112,900 feet was set by the SimSat-1B mission when it flew last week. Pat says that while the VHF telemetry failed early in the flight there are numerous clues as to why and the group is piecing the puzzle to help improve for future operations.

The Simulated Satellite or SimSat project is an education and outreach activity being developed by N8PK at the NASA Goddard Space Flight Center. A SimSat spacecraft uses a small high-altitude weather balloon platform to fly experiments designed and built by students to near-space altitudes.

In this case, a tiny CricketSat transmitter on UHF was also on board as a last minute hitchhiker. Powered by a standard 9 Volt alkaline battery and producing under 20 milliwatts, it operated all the way through splashdown and saved the day for tracking the flight.

More information and the part ham radio plays is on line at www.patkilroy.com/simsat on the World Wide Web. (N8PK)

**

HAM RADIO IN SPACE: MICROSAT ON DISPLAY

And some news from Dr. Perry Klein, W3PK, who says that The Smithsonian National Museum of American History has put a Microsat Mechanical Test Model on display in time for AMSAT's 35th Anniversary meetings. The satellite is suspended from the ceiling outside the NN3SI Smithsonian Amateur Radio Club station. That's located at "The Information Age" exhibit on the first floor at the West end of the American History Museum. (ANS)

**

HAM RADIO IN SPACE: SOLDERING ON-ORBIT

Meantime, the ham astronauts on the International Space Station have been trying to solder in zero gravity, and the results are intriguing. The NASA website says that the solder, heated, became a molten blob with a droplet of rosin clinging tight to the outside. As the temperature increased, the droplet began to spin, round and round, faster and faster, like a miniature carnival ride. You can see and enjoy the video of this experiment at at: http://science.nasa.gov/headlines/y2004/16aug_solder.htm (ANS)

**

DX

In D-X, word that G3UML is joining the Oceania DX Group operation from Lord Howe Island which is scheduled to start on 9th October. Separate stations will be active on CW and SSB. (GB2RS)

And look for DF7XE to be active portable SV8 from Thassos Island through the 13th of October. He will be using CW, SSB, PSK31 and RTTY on 10 to 80 meters. (OPDX)

Lastly, information that PA0CJH operating as 9G5JH is active from Ghana until November 13th. He is on 80, 40, 20, 17 and 15 meters using SSB, CW and PSK31. For each of these operations, Q-S-L as directed on the air. (OPDX)

**

THAT FINAL ITEM: ITS JOTA TIME

And finally this week, its time for scouts around the land to get together and take to the ham bands in the annual Jamboree on the Air. Amateur Radio Newsline's Mark Abramowicz, NT3V, is also a parent involved in the scouting program and has this inside look at the big event:

--

It's one of the best operating events of the year.

Why?

Because it showcases the best of our hobby to thousands of young people across the country and around the world.

For me, and others, it also gives us as operators a chance to reach out in brotherhood and friendship to young people. We get to serve as a bridge with our radios to other children and teens who share similar interests in Scouting.

Charlie Beck, chairman of Venture Crew 59, sponsored by the Frankford Radio Club and based out of Kutztown, PA is excited about his group's plans.

He says they will be operating KC3BSA from the Hawk Mountain Scout Reservation in Summit Station in eastern Pennsylvania.

"We're going to set up a couple stations in our science and tech center," Beck says.

At this point, he says you'll find Crew 59 on the HF bands on phone, CW and PSK 31. He says there are also plans to set up a VHF station and an EchoLink position.

Becks says the best part of the weekend event is getting visitors to the operation involved.

"I know we have some Girl Scout units and Cub packs and Boy Scout troops that will be stopping by," Beck explains. "They'll all get a turn to get on the air and try to make a contact with another Scout in another part of the world."

Beck says some get mike-shy, but that quickly dissolves with the help of a Venture Crew member sitting beside them.

"They'll be giving their name, their rank and talk about their hobbies and tell them where they're calling from which would be Schuylkill County in eastern Pennsylvania," Beck says.

Beck says the special part about JOTA is its diversity.

"There are Girl Scouts and Girl Guides. There's the World Association of Girl Guides and Girl Scouts that are invited to join in the JOTA," Beck says. "There's also a patch that the Girl Scouts can earn just like the Boy Scouts can earn for making contacts."

And, he says, for those who are a little shy about grabbing the microphone, there's also a keyboard.

"It's interesting to find the quiet Scout or the quiet boy to come in and sit down and get behind PSK 31 and really get in there and spend an hour chatting with different people around the world," Beck says.

Beck says Scouts across the country and around the world will be camping out and working radios from field conditions. Others will be going to stations of operators who've invited them in to take part.

Operators play a big part in making it happen and whether you've been a Scout in your lifetime isn't a factor. It's simply sharing the joy of the Amateur Radio service we've all come to appreciate.

Hope to hear you on the air during JOTA weekend.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

The 47th Jamboree on the Air takes place October 16th and 17th. More information is on line at www.scout.org/wse/jota.shtml and the Leagues website at www.arrl.org. (ARNewsline(tm))

> RIP (Run In Peace) Johnny Kelley...

One of my heroes is a fellow I see on the way to mass on Sunday .....He is in his late 70s, retired army who used to run with his lab. I stopped a few weeks ago and asked about his dog to which he replied "he is getting too old for this". My defining moment was a few years ago on a rather long hill when a carload of teens went by and yelled ...run old man run .... I had to stop and crack up laughing .....

It's a "crime" only if someone makes a mention of that in HERE. :-)

Along with asking for admiration and respect for kluges in basements
representing the state of the radio art of the 1990s...using tubes. :-)

But, Jimmie IS "serving his country" by engaging in the ham
radio hobby.

Wonder if he is eligible for the GI Bill from such "service to his
country?" There's still a PhD ahead for him, ya know... :-)

>radio communications - extensively. Of course after about 1920 or so they
>used
>other modes too, but Morse Code on military radio played a central role in
>WW2
>and for many years afterward.
>
>Of course Morse Code for military communications suffers from some basic
>problems: It's slower than some modes, particularly RTTY, and it requires the
>use of skilled operators at both ends of a circuit (RTTY requires only that
>the transmitting op know how to type).

Morse code is slower that ALL modes. Tell the truth.

Yes, all must "know how to type" on a teleprinter...look at the keys,
read their tops, press the appropriate key, see it appear on paper or
screen. Difficult. Hi hi.

>Once upon a time, the need for trained Morse Code radio operators was given as
>a valid reason for ham radio having a Morse Code test, because hams would then
>form a source of self-trained candidates for the military. In both World Wars,
>there arose times when the US military needed to rapidly expand their number
of
>Morse Code radio operators, and many of them came from the ranks of hams of
the
>time.

World War 2 ended 59 years ago. Having served your country, you knew
that, didn't you? :-)

>Of course the US military has pretty much completely phased out the use of
>Morse Code for radio communications. Probably the last extensive use ended
with
>1997, when the Coast Guard ended its maritime Morse Code operations.

Not "pretty much." COMPLETELY.

>There may be some very specialized uses for Morse Code in the US military left
>today, but that's all. Heck, the Navy doesn't even have a "Radioman"
>title/MOS/job description anymore. So that old reason for a Morse Code test
has
>lost its validity over time.

Old legends die with difficulty...but they DO die...

>Where Len fits into all this is that he was at ADA in Japan in the early
1950s.
>He worked on their radio transmitters there. Their main radio task was long
>distance communications back to the Pentagon and other locations around the
>Pacific. ADA didn't use Morse Code; all the messages went by RTTY on fixed,
>predetermined frequencies determined mostly by propagation.

Tsk. Operations and Maintenance. Supervisor.

NONE of the stations in ACAN used morse code for communicaitons. Still
don't after 51+ years.

>Len apparently thinks that because ADA transmitter technicians didn't need to
>know Morse Code to do their jobs in 1952, amateur radio operators shouldn't
>have to know Morse Code to get amateur radio licenses in 2004. In fact, Len
>apparently thinks that because ADA transmitter technicians didn't need to know
>Morse Code to do their jobs in 1952, amateur radio operators shouldn't have
had
>to know Morse Code to get amateur radio licenses for many years before 2004.

Nice reducto ad absurdum non-summation. Tsk, you forget that a station
in the ACAN was my FIRST exposure to the Big Leagues in HF comms.
It wasn't the last. Experience and observation of the past half century has
shown that morse code testing is nothing more than an artificiality, a
fallacy in thinking kept alive by fantasy belief systems of olde-tymers in
hamme raddio.

>Of course, as you say, "we're not military", so that logic is faulty. But it's
>what Len is yelling about here.

Am I "yelling?" Heh heh, I don't think so.

>Some time back, I posted a short description (written by others) of operations
>at radio station WAR early in 1942. Included a description of the use of Morse
>Code their. Len went ballistic on that one.

Tsk, tsk. "Ballistic?" Hi hi.

WAR (Washington Army Radio) was the biggest station in ACAN. In 1953
it was all teleprinter for communications...and DURING WW2 the major
communications mode was teleprinter, not the alleged morsemanship stuff
implied in that "short description" written by another.

>Further back, I posted a description of one of the code test used at US Navy
>Radioman "A" school in 1958 (24 wpm, 5 letter code groups, copy on a
>typewriter. Maximum allowable errors: 3 in a one-hour session). I don't
>recall a favorable reaction from Len...

Poor baby. Want me to gush about morsemanship? That's asking for
too much... :-)

1958 is 46 years ago. Times have changed a bit since then. Really.

>Even earlier, another amateur and professional radio operator (Jeff Herman)
>posted a fascinating description of what it wa like to operate Coast Guard
>radio at NMO in Hawaii. Included lots of Morse Code - well into the 1990s.
>Len's reaction was the now-famous "sphincter post"....

"Famous?" I don't think so. In your mind, perhaps.

Tsk. Jeff Herman is a "lecturer in mathematics at a university!"
In reality he is an instructor at a junior college...based on another
little back-and-forth we had...from references of the junior college
website and instructor listing.

Morsemanship allows one to use Titles such as "lecturer?" Hi hi.

>>>>>>>Perhaps Len wants *all* amateur radio tests eliminated.
>

>suppressed.

How about "minding one's manners?" :-)

Tsk. All who are NCTA want to sink PCTA to "their level?" :-)

>>Sometimes maybe people can mistake disagreement with suppression.
>>
>That's what Len seems to think. He seems to think that disagreeing with him is
>the same as telling him to shut up. Worse, he *really* gets ticked when
someone
>points out an error in his information or logic. Like the whole flap about
>Fessenden using voice radio in 1900...

Tsk. My "error." :-)

Of course, everyone in radio broadcasting jumped right in with the
Fessenden system of modulation...putting a microphone in series with
the antenna lead. :-)

>>> I've never told anyone online to shut up.
>>>
>>> You have.
>
>>>>>"Do as Len says, not as Len does"
>

>>

>Back on January 19, 2000, Len (as Lenof21) wrote that he was "going for Extra
>right out of the box". He didn't. Almost five years now and he's not even
>tried the Tech written.

Heinous crime against the state! Terrible! :-)

>Of course an amateur radio license isn't a prerequisite to posting here.
>However, it *does* help with someone's credibility among radio amateurs.

Tsk. Again my fault. I can't quite get a foothold on the fantasies
and mythos surrounding amateurism. Must be the contamination of
working with professionals so long...

>>> Did Dave Heil, K8MN, ever write that to you?
>
>I cannot recall K8MN ever telling anyone to shut up.
>
>In fact, the exact phrase Len used was:
>
>LHA: "Shut the hell up, you little USMC feldwebel"
>
>USMC does not refer to the Marine Corps. "Feldwebel" is German for corporal,
>the rank held by a certain mid-20th-century dictator when he was in the
>German army in WW1.

"Feldwebel" is a general/colloquial descriptor of any German army
enlisted type, particularly NCOs which have the more proper title of
"Feldhern" or "Feldherren."

Those who act like the archtypical feldwebels tend to get called what
they are.

But, if said to a PCTA extra, it is a capital crime in here. :-)

>I don't recall Len using any smileys with that, either.
>
>>> Len seems to think that if one person tells him to "shut up", it somehow
>>> justifies him telling someone else to "shut up".
>
>>My folks taught me better.
>
>He missed that lesson.

Tsk. Must be 'cause I didn't grow up Catholic or fully in the east.

So, how much did your respective parents charge for all those
"lessons" supposedly given to others not in the family?

>>> That's faulty logic on Len's part.
>
>>I say, "Speak up Lenover21!" Don't allow people to squelch you!
>
>Len doesn't need any encouragement to speak up ;-)

Tsk. I should have stayed in Marina del Rey longer... :-)

>designs
>> >have changed over the years.
>>
>> Tsk. Kluges are still kluges.
>
>I don't know of any clothing styles called "kluges".

"Kluge" isn't a clothing style. It refers to a thrown-together
(usually hastily) collection of odds and ends of aerospace
things to serve a temporary purpose. Been a common term
in aerospace for a half century.

>> You should call it "modern radio art" and thereby rationalize that
>> you are "advancing the state of the radio art!" :-)
>
>Is that an order?

Tsk. Still upset about your handiwork not being admired and
respected? Even if it has the appearance of being a kluge?

>> Riiiiiight...by making "modern" radio designs using tubes in the
>> 1990s...:-)

>
>Electro-politically incorrect to you, I suppose...

Gosh no. Forget the transistor got invented in the 1940s. Tubes
are venerable, traditional, the stuff of might and brawn in hum
raddio...according to the olde-tymers.

>> >I find that most of the "modern ready-built" radio sets are very
>> >unattractive.
>>
>> ...just like all the other radio amateurs? :-)
>
>I find some other radio amateurs unattractive too. Most I find to be
>nice people.

But, you don't LIKE the "modern ready-builts." :-)

You want to re-invent the wheel and get all the applause for being
able to use chassis punches... :-)

>> Why are the designer-manufacturers continuing (after years of doing
>> so) to design such "unattractive" exteriors?
>
>One reason is that it's cheaper for them to do so. Another is that, as
>in fashion, conventional marketing wisdom says that things have to

HAR! :-)

>What I do have is "independent thought" about what's attractive and
>not attractive. I find that most of the "modern ready-built" radio sets are
very
>unattractive. If that's unacceptable to you, tough.

Rationalization for being ultra-cheap...or terribly strapped for available
cash even though working as an electronics engineer (implied) for
money. Tsk.

>> >Cluttered front panels, poor color choices, knobs and displays way too
>small
>> >and too close together, etc., etc. So I purposely avoid such design in my
>> >projects. If the set is a little bigger because of it - so what?
>>
>> Kluges are still kluges. :-)
>
>Back to talking about clothing again?

Not me. "Kluge' is a familiar term in aerospace. Too bad you never
worked in that...

>> Decals for radio markings have been around for a half century...
>
>So what? I don't think the use of decals would make the Type 7
>attractive to you.

Tsk. Still smarting from the lack of appreciation of your personal
hobby stuff?

>> are
>> clearer to read that scribbled felt-tip marker pen markings.
>
>There are no such markings on the Type 7.

Hard to tell from a single picture on a personal website.

>> But, if
>> those are "beauty" to you, feel free to enjoy it.
>
>I don't need your permission, Len.

Tsk. But all NCTAs need YOUR permission to exist in here... :-)

>> Try NOT to impose
>> your "standards of beauty" (radio-wise) on others.
>
>I don't. It is *you* who try to impose your standards of
>"attractiveness" on others.

You've said that morse code is "music to your ears." :-)

Tsk. That wasn't in any music appreciation venue that I know
of (and that's considerable).

>Yet we are yet to see any examples of *your* homebrew HF radio
>projects, made in your own shop with only your own resources.

Ah. The "challenge" is made! Gauntlet thrown down.

SHOW WORK! MAKE WEB PAGES FOR DISPLAY!

"Proof" is in the web pages! If it doesn't exist, then everyone
"lies." :-)

>DOS tip, Len: AOL gives you a free home page with each screen name.
>You can have up to seven! Plus they provide easy-to-use software to
>help you set them up. Even I managed to get two of them done in a
>short time. (Yes, there's another...)

Tsk. The limit is 2 MB per name. Good for some snapshots,
little more. :-)

>So *show us* what *you* could do in the home workshop, using only your
>own resources.

Geez...all but baring your teeth in a snarly challenge! :-)

You are still put out that all I said of your single photo was that it
was "neat." No gushing admiration for your prodigious chassis
punching, no respect for your mnemoic capabilities of tube circuit
recall. Sigh.

>About the Type 7:
>
>Had I used "decals" on the Type 7, you'd complain that they were
>glossy and hard to read, plus easy to rub or wash off.

A simple Lucite of Plexiglass cover plate (easy to work) will
protect such things.

>Had I used tape labels, you'd complain that they looked "primitive"

But you didn't and I didn't remark on it. Yet you "know" I would
have said what you accuse me of doing...hi hi.

>Had I used engraved nameplates, you'd complain that they looked old
>and like an afterthought.

But you didn't and I didn't remark on it. Yet you "know" I would
have said what you accuse me of doing...hi hi.
>
>Had I silkscreened the front panel, you'd complain that it wasn't
>engraved.

But you didn't and I didn't remark on it. Yet you "know" I would
have said what you accuse me of doing...hi hi.
>
>Had I engraved the front panel, you'd complain about the color choice.

But you didn't and I didn't remark on it. Yet you "know" I would
have said what you accuse me of doing...hi hi.
>
>Or similar stuff.

But you didn't and I didn't remark on it. Yet you "know" I would
have said what you accuse me of doing...hi hi.
>
>> >>Jim's radio did just that.
>> >
>> >And much more.
>>

>perspective.

Tsk. Inferiority complex you have?

>> >>We forget Lennie's only reason for being a "radio
>> >>professional"...profit.
>> >
>> >Nothing wrong with that!
>>
>> "Nothing wrong?"
>
>No, there isn't.

There is wrongness in still keeping the code test in U.S. amateur radio
regulations.

>> Tsk. That's a hypocritical statement in here!
>
>How? By whom?

Yourself...a PCTA extra with the Double Standard.

>> >> WE do what we do for FUN!
>> >
>> >Also service to our country.
>>
>> BWAHAHAHAHAAHHHAAAAA....!!!!
>>
>> Engaging in a part-time HOBBY is a "service to the country?"
>
>Sure.

Nonsense. Particularly from someone who NEVER served in
the military.

Your mindset is so engrossed in amateur radio as your raison
d'etre that you've slipped over the edge of reality into fantasy.

Tsk. Is the next brag claim "hostile action" experience? :-)

>
>Thus the tube radio. No synthesizer. What a wunderful way around it.
> Hi, hi!

Ever see a mention of "phase noise" causing all the front end noise
in receivers back 20 years ago? :-)

Nope. Just plain old "kay-tee-delta-eff" random noise. That's still
around, still the limiting factor in sensitivity.

Jimmie, putting on his "kluge clothes," said that "phase noise" is
THE limiting factor in receiver sensitivity. He has two degrees and
is a PCTA extra...no one can argue with him. :-)

>
>Yet most of the HEROES of amateur radio were doing their heroic work
>as PROFESSIONALS!!!
>
>Explain.
>
>Explain again!

Tsk. Jimmie NEVER said what HE does at his regular job. All he's
admitted to was in one Comment on one of the petitions at the FCC
that he is engaged in vehicular propulsion systems. That's all. No
details, just a general statement.

Well, Jimmie must do SUCH good work at work that he doesn't think
any of it is a challenge. Tsk. No enthusiasm shown for what he does
for a living.

The "challenge" is to build kluges in the shack and then try to get
everyone to admire and respect his work.

>> >> Not worth it, since the typical PCTA
>> >> extra "commentary" (to use a word very loosely) would be
>> >> totally derogatory.
>>
>> You mean you fear reaping what you sow?
>
>"We" only fear reaping what Steve sows. Spooky dood. Low-class

>> >> there is a lot of it.
>>
>> It's real simple, Len:
>>
>> Pick an HF radio project that you did in your home workshop as a "hobby"
>> activity. Not something for work, or something you did as part of a group,
but
>> something you dreamed up and built yourself, just for the fun of it. Not
some
>> accessory, either - a complete receiver, transmitter or transceiver.
>>
>> Put a picture and a short description on your AOL homepage, just like I did.
We
>> don't need megabytes or a long diatribe. Just a .jpg and a short
>description.
>>
>> My project is out there for all to see. Where's yours? Or are you too afraid
of
>> what others will say?
>
>Was Fesseden's projects for amateur radio? Marconi?

All of the broadcasting stations I worked in all do AM by sticking a single
microphone in the antenna leads...NOT. :-)

All of the broadcasting stations I worked in all did morse code news...NOT.

Actually, I DO have enough material that could be digitized from various
employments (even has my picture in some of them), enough to fill at
least 100 MB of filespace. Why bother? Just to answer Jimmie's
so-called challenge? He thinks so. He says it enough to make it a
demand.

I DO have some pictures of stuff I've done personally, again enough to fill lots of filespace. I'm even taking progress pictures as a couple projects get done in various stages. For MY pleasure and maybe some ideas for a very few others who I've known for some time.

I'm not out in any "competition" via websites appearance or that sort of thing. I'm not out to garner admiration and respect through websites.

Jimmie got bent out of shape by not getting gushing admiration or respect for his kluges built from tubes in the 1990s. Saying that the photo shows neatness isn't enough. We were all supposed to applaud and make gratuitous nine-nice noises?

As to the "ability to draw schematics from memory," I don't recall a single design review meeting at work where a participant was NOT able to recall schematics from memory...of their project, or others projects that they were peripherally involved in. That includes ALL details pertinent, such as environmental conditions, some mechanical structural considerations and the like.

>> >> A federal REGULATION requiring morse code testing in order
>> >> to get an AMATEUR license to operate on HF is NOT
>> >> "live and let live."
>>
>> Yes, it is.
>
>It is not. No other AMERICAN radio service requires such.

To the PCTA extra, the ONLY way to be American is to take the code test...like THEY did.

Ho hum.

>Would you mind saying that just one more time for the record?

Please don't encourage the guru of here...Jimmie will bust a gut writing and writing and writing and writing "truth" (as only he knows).

>And all PCTA's are actually against doing away with the code test on
>the ground that it will diminish their status as "REAL Hams."

That is IT in a nutshell. Quintescense of their existace. :-)

>somehow make him/her the most qualified person to set the rules and
>regs in *amateur* radio?

Ham radio regulations are to be regulated SOLELY by hams?

Tsk. FCC do dat. For EVERY civil radio service. It's the law.

But hum raddio is "different." :-)

>> Lennie has insisted that his "professional" career was far more productive
>> and useful than anything Amateurs do.
>
>Where did he do that?
>
>What I have seen is numerous verbose listings of his employers, and
>projects he was part of. That's all.

Yes, I've named employers and some work done. I was there and
did those things.

Where did Jimmie do his engineering work on radio?

>> I want to know WHAT it was he thinks he
>> did that is so useful? What is in my home or what do I use on a daily basis
>> that has HIS direct participation in that I can't do without?
>
>Don't hold yer breath!

Tsk. There's NOTHING about what either one of you has done that
affected my home or what I use on a daily basis. Nada. Zip.

>> >>Lennie's "contribution" to radio was getting coffee for and staying out of
>> >>the way of the REAL radio professionals as they did REAL engineering and
>> >>design work.
>> >
>> >How do you know that, Steve?
>>

>> as he.
>>
>OK - let's say, just for the point of discussion, that your source is
>right on the money.

Just for the point of the discussion consider that nursie is a LIAR.

Nursie has NO such name. That individual is a fabrication of his
fantasy world.

Nursie CAN'T name any names becuase no such person exists.

>That only covers one time period at one facility. Len tells us he has
>worked a lot of places over a long period of time. One
>less-than-stellar job does not a career ruin.

Tsk. "Less-than-stellar." :-)

I completed a career, don't have to put in regular hours anymore.

Don't you just HATE it when someone ruins your ranting? :-)

>> >Besides - it's not the issue.
>>
>> It is as long as Lennie keeps trying to throw his "professional" weight
>> around.
>
>No, it isn't.

It seems to be nursie's core of existance in this newsgroup. :-)

>In Len's case we have an extreme example:

[in Jimmie's case he is the "stellar example" of what a "real ham" is]

>He's never had an amateur radio license

True.

>Never worked as any sort of licensed radio operator in any other radio
>service

WRONG. INCORRECT. ERROR!

>Never been involved in radio regulatory matters other than writing
>voluminous comments to FCC,

Tsk. Jimmie hasn't been any sort of radio regulator.

>Never manufactured or designed any equipment for hams

Did Jimmie do dat? :-)

>Hasn't written an article or done a visible project in amateur radio
>circles for more than 22 years

I quit going around in circles. :-)

>And by his numerous mistakes in his postings here, doesn't really know
>that much about what hams actually do on the radio in the first place.
>(Note his continuing non-understanding of why phase noise is an issue
>for HF hams).

My visa for Fantasy Island has expired, don't know what "hams
actually do on the radio in the first place" because I couldn't
possibly be first place. All I can do is hear them. | snore |

Tsk. Radio physics must have changed in Jimmie's fantasy ham
world. "Kay-tee-delta-eff" is still there as the major sensitivity
limiter for all other radios (aka "Johnson noise" or whatever anyone
wants to call random, above-absolute-zero noise voltage in
components).

Jimmie's ham world doesn't have buzzwords. It has only the most
modern of things. Like kluge-looking transceivers built from recycled
parts and tubes in the 1990s.

>Yet he tries to tell us that his professional background somehow makes
>him more qualified than to determine *amateur radio* policy than any
>of us hams.

NOBODY can tell a PCTA extra ANYTHING! :-)

THEY rule amateur radio! [the FCC is just a federal agency, not
involved?]

NO FCC staffer or commissioner is required to have any amateur
radio license.

>It would be like me, a male non-golfer, saying that I know best how
>the LPGA should be run. Or that the folks who run the cruise ships
>should determine policy for sailboats.

Riiiight, Tiger. Good luck on your new marriage and PGA next year.

>The entire argument is faulty.

PCTA extras enoble themselves to sit on "judge" benches. :-)

>It's not an issue of whether Len is/was
>a "hotshot" but rather how valid his arguments are.

Jimmie says everything I say is "wrong" and "in error." :-)

Well, it's hard to argue with someone who "serves his country" by
engaging in the hobby of ham radio...

>The rest is diversion and bafflegab.
>
>It would be like me, a male non-golfer, saying that I know best how
>the LPGA should be run. Or that the folks who run the cruise ships
>should determine policy for sailboats.

Tsk, despite saying that twice, the point wasn't made.

Like it or no, the FCC still does NOT require any staffer or commissioner to hold an amateur radio license in order to regulate U.S. ham radio.

Don't you just HATE it when someone brings reality into a simple little rant you have?

>The central issue is whether his proposed changes would help or hurt
>the ARS. I say they would hurt the ARS.

The Archaic Radiotelegraphy Society (ARS) will be fatally hurt by removal of the code test for any ham license.

It will be the End of The World As They Know It. Bye....

That is correct I am indeed CW tested. In front of the FCC at 13 AND 20 WPM. 25 if you count the commercial telegraphers exam.

As for the BARF.....the answer is simple, about 70 licensed amateurs joined it. All of which were either braindead, or stupid. Perhaps both.

Dan/W4NTI

351. For the Benefit of Mr. Kite #2

Newsgroup: rec.radio.amateur.policy
Date: 2004-10-09 04:11:47 UTC
From: Dave Heil <k8mn@earthlink.net>
Message-ID: <416764FA.F4E7C442@earthlink.net>
Source record: 98350

Mr. Kite is still having a problem in understanding what problems are caused by synthesizer phase noise. He seems to be stuck in the rut of believing that an attempt is being made to redefine "noise" and he has the idea that we're tying the issue of "phase noise" to sensitivity. Noise floor is typically not an issue at HF where local noise routinely overrides the noise floor of a receiver. Earlier I submitted several urls for Mr. Kite's edification. He might learn something about the issue if he reads page 52 of the .pdf file found at:

http://www.arrl.org/tis/info/pdf/020708qex046.pdf

A sugar-coated version appears in the article at:

http://www.arrl.org/qst/2004/08/Tracy.pdf

Yes, Mr. Kite, phase noise was an issue twenty or more years ago. There were frequency synthesized transceivers back then.

Register now for the FREE IARN Emergency Communications Graduate School which is held four times each year during the weekends of January 17th, April 18th, July 17th, and October 16th, 2004. A Certificate will be awarded to all those attending and passing the final exam.

Either fly into Boston and rent a car or else fly into Augusta, Maine where we will pick you up. Plan to arrive by Friday evening and to return home Sunday. You pay for your own travel expenses, meals, and accommodations. The IARN Emergency Communications Graduate School itself is FREE and is sponsored by AARA, the American Amateur Radio Association. Call now for your reservations at 207 495 2215. For more details go to www.K1MAN.com. www.K1MAN.com

The FREE (International Amateur Radio Network) IARN Emergency Communications training course, with 20 levels of official IARN Certification, is also available for on-line home study. Simply send two C-90 cassettes and enough return postage for five ounces to IARN, Box 440, Belgrade Lakes, Maine 04918.

Signed on to the NG this morning to find the following items posted to the NG from Blowhard Baxter and Company.

Mr Stussy presumes to express his dismay at the once-a-week, single postings of the Amateur Radio Newsline, calling it SPAM.

I am eager to see if Mr Stussy is as equally adamant in his "fight" to get K1MAN to stop sludging up the Internet with his extension of his on-the-air antics or not.

I seriously doubt his actions will match his rhetoric.

73

Steve, K4YZ

JUMP TEAM RADIO OPERATORS NEEDED

This one is particularly cute as it "suggests" that "all health and welfare traffic is being routed" via IARN resources.

K1MAN DAILY TRANSMITTING (BULLETIN) SCHEDULE

K1MAN has been warned directly by the FCC that this does not protect him from starting up on top of on-going QSO's or nets. Guess he's not got the word yet.

IARN, THE INTERNATIONAL AMATEUR RADIO NETWORK, IS ACTIVATED

Gee...aren't WE lucky.

IARN AMATEUR RADIO TALK PROGRAM

Blowhard Baxter Blowing Bogus Bulletins And BS Across the Bands

IARN EMERGENCY COMMUNICATIONS GRADUATE SCHOOL

Uh huh...That's what >>I<< want...A "graduate" certificate from an idiot that has more correspondence from the FCC than he ever got QSL cards!

MISSION STATEMENT

This was a waste of bandwidth.

IARN EMERGENCY TRAFFIC ACTIVATION LEVELS

I sure hope the Red Cross, Salvation Army, et al, make sure they have this handy schedule of services at hand...

>of candidate rigs. It didn't take long for me to write off all of the
>current crop of whizzy do-it-all underdash xcvrs because of their

>absolutely lousy basic performance. Bottom-end BDRs, IMDs, fershtink
>selectivities (ceramic filters . . . gimmee a break!) along with a
>lack of open filter slots, menu-dipping galore. IC-706, FT-897, etc.
>Toy radios for the no-clues, fuhgeddit, allum. But (almost) all of
>those writeoffs do offer the ability to get on the VHF/UHF bands with
>all modes, a capability I added to my "gotta-have" list. I just
>*gotta* do some 6 & 2M cw & ssb.
>
>Can't imagine how that sweet old thing from Smog Central came up with
>his whacky comments about PCTAs not being into the VHF/UHF bands. He
>needs his head bolts retorqued.
>
>Did not take long for me to zero in on the FT-847 because it's the
>only xcvr out there anywhere which meets all of my basic objectives.
>Despite it's reputation for being a heap of compromises and having a
>collection of goofy warts and quirks. I also discovered that most of
>it's numerous warts can be fixed with a soldering iron. No-brainer
>there if one isn't afraid to perform surgery on a new kilobuck+
>radio's innards.
>
>So I popped for one knowing full well that I'd bought something of a
>Yaesu "'kit radio".
>
>Out-of-the-box and tuning around the HF bands it was it was, shall we
>say, pretty unimpressive. Dismal? Woulda turned you off five seconds
>into a test listen. But I expected that. The killer mod was the
>installation of the 400Hz and 2.1Khz 8-pole INRAD IF filters a few
>weeks before you got your mitts on it during this past FD and
>commented it's an acceptable if not a rather decent performer. Given
>the fact that you ain't got much tolerance for lousy front ends, phase
>noise, birdies, menus, crummy selectivity and such.

Homebrewing does spoil one that way...

>I might even have the temerity to take it into the upcoming CQ WW CW
>meatgrinder barefoot with a G5RV depending on how the plans work out
>for a go at it with K3NL from his place. The K3NL "planning committee"
>meets tomorrow at Casey's on Lansdowne Ave. Heh.

So you guys gonna do it or what?
>
>The dollars I've invested to date my moded 847 are not trivial, I'm
>already at a bit over $1,500 and climbing as I keep adding
>"enhancements"to the thing . . . yeah, I know, I could have bought a
>used FT-1000MP (Not a "Field"!) for those kind of bucks. But an MP is
>not a pack 'n go rig like the 847 nor is it usable >30Mhz. so that was
>the end of that. I'll pick up an MP later and have the best of both
>worlds. I did draw some lines on the monies though. My original intent
>was to spend around $800 for a used 847 which are everywhere in the
>used market. The street price from HRO at the time was around $1,500.
>No way! But I ran into a sale on new 847s for $1250 gulped hard, bit

>the bullet and bought it. The two filters cost $155 each. Current HRO
>price is $1,400 which I still wouldn't go for.

And if you sold it tomorrow, how much of that could you get back? I dare say it
was a good investment.
>
>I rattle on too much as usual. My point is that if there's anybody out
>there still awake and looking for a nice little portable xcvr which
>covers 12 bands and does all modes much better than the really compact
>(junkers) the 847 is coming up a good choice for this particular OF.
>
>It's about 11 x 11 x 3.5 inches big and only weighs 16 pounds.

Light enough to cart around but heavy enough that ya don;t have to chase it
around the table.

writes:

>phase noise was an issue twenty or more years ago. There
>were frequency synthesized transceivers back then.

Some more fun facts:

- Ten Tec, maker of arguably the best amateur radio HF equipment ever made,
started out in the late 1960s. The company was founded on, and grew on, QRP CW
equipment.

- Digi-Key, the excellent mail/online electronic parts vendor, got its start in
the same time frame. Its name derives from its original purpose - selling
digital ICs by mail to hams in small quantities, primarily to build CW keyers.

K1MAN DAILY TRANSMITTING (BULLETIN) SCHEDULE:

IARN AMATEUR RADIO TALK PROGRAM

You can listen to the program on 14.275 MHz. USB or 3.977 MHz. LSB at
5:30 A.M., 1 P.M., 4:49 P.M., 8 P.M., 12 midnight, and 3:00 A.M or 3.890
MHz. Amplitude Modulation at 6:23 P.M., and 9:30 PM - all Eastern Local
Times. See www.K1MAN.com for further details. The talk show call-in
number is 1-800-262-9543

.....

Now why would anybody want to listen to his bull crap?
If you want a t-shirt, be my guest.
I understand they work better than toilet paper.

news:10mfek55r78gca6@corp.supernews.com...
Glenn Baxter, K1MAN, and John Palmer, WB8TUZ, of Dallas, Texas,
announced today the kick-off of their new IARN AMATEUR RADIO PEACE
CORPS KIDS PROJECT. This nationwide and even world wide project will
systematically introduce Amateur Radio to minority kids world wide
for educational, motivational, and discipline learning purposes with
the intent of "Helping kids to make good career choices" according to
Mr. Palmer, a Radio Amateur from Dallas, Texas and former Engineering
Technician with the Heath Company in Benton Harbor, Michigan. The
first IARN KIDS PROJECT international conference will be held in
Belgrade Lakes, Maine this Summer. Mr. Palmer will appear as Glenn
Baxter's special guest in a weekly series about the KIDS PROJECT over
the K1MAN amateur radio short wave bulletin service beginning with the
12 January 2003 program. There is also a new web page for the IARN
KIDS PROJECT. Go to www.K1MAN.com and click on IARN AMATEUR RADIO
PEACE CORPS KIDS PROJECT. Mr. Palmer can be reached for further
comment at 214 375 8958. His E-Mail is jwpalmer3wb8tuz@earthlink.net

Mr. Baxter, K1MAN, is a former Industrial Engineer with the Collins
Radio Company (Automatic Process Division) in Cedar Rapids, Iowa. Mr.
Baxter stated that "I can't imagine any Radio Amateur who would be any
happier than those who have been in the engineering cultures of the
Heath Company or the Collins Radio Company. Mr. Palmer brings much
of the fabulous Heath engineering culture into our IARN and AARA
organizations, and we are all thrilled to have him aboard. Mr.
Palmer's dad was a black high school principal in Missouri, and also
brings a culture of innovative teaching and the education of bright
children into IARN and AARA. The American Amateur Radio Association is a
major sponsor of the IARN AMATEUR RADIO PEACE CORPS KIDS PROJECT," said Mr.
Baxter. For more information go to www.K1MAN.com.

.....

As I said. If one runs out of toilet paper I hear that Baxter's t-shirt
works just as well.
After all, the t-shirt is already full of shit so what is a little bit more?

366. Kerry to sponsor National Sales Tax

IARN AMATEUR RADIO TALK PROGRAM

You can listen to the program on 14.272 MHz. USB or 3.977 MHz. LSB at 5:30 A.M., 1 P.M., and 8 P.M., or 3.890 MHz. Amplitude Modulation at 6:23 PM, and 9:30 PM, all Eastern Local Times. See www.K1MAN.com for further details. The talk show call-in number is 1-800-262-9543

SECOND ANNUAL TEACHER'S MEETING

The first annual teacher's meeting for amateur radio in the classroom was held on 12 July 2003 at the Plaza Hotel in Las Vegas, Nevada. It was a huge success. The second annual teacher's meeting will be held at the Holiday Inn in Augusta, Maine (Exit 31B from Route 95 coming from south and Exit 31 from Route 95 coming from the north). You can also fly into Augusta, Maine, and we will pick you up at the airport. Another option is flying into Boston, Mass. or Manchester, N.H. airports and renting a car. For Holiday Inn reservations for this meeting, call 1 207 621 8674 and also register with the American Amateur Radio Association by calling 1 800 262 9543.

Teachers using or ever having used amateur radio in the classroom with any success are invited to be speakers. Those others who have ideas for use in the classroom are also invited to speak. Call 1 207 495 2215 if you are interested. The meeting is free and will be held on Saturday, 10 July 2003. Guests should plan to come in as soon as Wednesday for informal meetings and spending time at and on the lake at Baxter Point and touring the studios of K1MAN and the offices of IARN, the International Amateur Radio Network and AARA, the American Amateur Radio Association. See http://www.k1man.com/web16/Page_5x.html For more information go to www.K1MAN.com and click in IARN Amateur Radio Peace Corps Kids Project: page 26.

DOES YOUR SCHOOL RADIO CLUB (OR YOUTH GROUP RADIO CLUB) NEED SOME DONATED AMATEUR RADIO AND/OR COMPUTER EQUIPMENT?

THE IARN AMATEUR RADIO PEACE CORPS FOUNDATION, INC. ASSISTANCE TO SCHOOLS AND YOUTH GROUPS PROGRAM - REQUIREMENTS FOR OUR HELP WITH DONATED HAM RADIO AND/OR COMPUTER EQUIPMENT FROM THE IARN AMATEUR RADIO PEACE CORPS FOUNDATION - SPONSORED BY AARA, THE AMERICAN AMATEUR RADIO ASSOCIATION. (See www.K1MAN.com for more details.)

THE BASIC REQUITEMENTS ARE:

1. You must be organized as a club which is affiliated with AARA, the American Amateur Radio Association. To do this, send a self addressed stamped envelope with enough return postage for five ounces to AARA, P.O. Box 440, Belgrade Lakes, Maine 04918. You will need at least 3 AARA life members in your club. (Student life membership is $15.00 per person.)

2. You must have a letter from your school Principal (or other appropriate authority) indicating that you have permission to put a vertical antenna (attached to a vent pipe, for example) on the roof of your school (or other building). Other roof antennas might be an inverted "V" on Radio Shack TV mast sections attached to something on the roof, or even a conventional dipole (or more than one dipole cut for different bands such as 20 and 40 meters, etc., with a single common coax feed line).

3. You must have a designated and secure space or room for your school radio club activities.

4. At least one member of your club must have a General Class or higher Amateur Radio license.

5. You do not need to have a club station license, but this is preferable.

6. ATTENTION VETERAN RADIO AMATEURS: Your donated Amateur Radio equipment to IARN [a 501(c)(3) tax exempt organization] for refurbishing and placement in schools and youth clubs is tax deductible at the fair market value as designated by you. Mail, UPS, or drop off your old or unwanted ham, CB, and even old computer equipment at: IARN, c/o AARA, the American Amateur Radio Association, Point Road, Belgrade Lakes, Maine 04918 U.S.A.

7. Go to www.K1MAN.com for more details about this IARN/AARA school and youth group assistance program.

8. Check in to the Classroom Nets Monday through Friday on 7.238 MHz. between 7 AM and 8:30 AM and on 14.272 MHz. (plus or minus QRM) between 9:30 AM and 12 Noon and also between 1:30 PM and 4 PM. Tune around between 14.265 MHz. and 14.285 MHz. from 8:30 AM to 6:00 PM, since the IARN 20 Meter Classroom Net is a frequency agile group of "hands on" Radio Amateurs!

IARN EMERGENCY TRAFFIC ACTIVATION LEVELS

LEVEL I - Emergency and health and welfare traffic for the affected area(s) is being E-MAILED to IARNtraffic@aol.com plus a 24 hour IARN AMTOR mail box on 14.127 MHz. LSB, SEL call KMAN.

LEVEL II - Same as Level I plus live nets on 14.275 MHz. USB. Also IARN HF bulletins are now on 14.272 MHz. USB; 3.977 MHz. LSB; and 3.890 MHz. AM. (Go to www.K1MAN.com for further emergency network information.

LEVEL III - Same as Level II plus deployment of volunteer radio operators with radio equipment and portable generators to the affected area(s) to hand carry all accumulated network traffic plus set up amateur radio stations in public places and/or shelters to solicit outgoing traffic. Radio jump team volunteer operators should pre-register by calling IARN headquarters at 207 495 2215. See www.K1MAN.com for further details and information.

Note: Radio amateurs and short wave listeners should monitor 14.272 MHz. USB; 3.977 MHz. LSB; and 3.890 MHz. AM. Call your local radio and/or T.V. stations and tell them what you and amateur radio are doing. Give them your telephone number and your E-MAIL address (or IARN traffic@aol.com) for the gathering of emergency and health and welfare traffic for the affected area(s).

See www.K1MAN.com

IARN AMATEUR RADIO TALK PROGRAM

You can listen to the program on 14.272 MHz. USB or 3.977 MHz. LSB at 5:30 A.M., 1 P.M., and 8 P.M., or 3.890 MHz. Amplitude Modulation at 6:23 PM, and 9:30 PM, all Eastern Local Times. See www.K1MAN.com for further details. The talk show call-in number is 1-800-262-9543

FOR IMMEDIATE RELEASE

Wall Street Journal, W5YI, World Radio, QST, Amateur Radio Newsline, CQ, W2NSD, and the American Amateur Radio Association world wide distribution list:

de K1MAN

7 January 2003, Belgrade Lakes, Maine

Glenn Baxter, K1MAN, and John Palmer, WB8TUZ, of Dallas, Texas, announced today the kick-off of their new IARN AMATEUR RADIO PEACE CORPS KIDS PROJECT. This nationwide and even world wide project will systematically introduce Amateur Radio to minority kids world wide for educational, motivational, and discipline learning purposes with the intent of "Helping kids to make good career choices" according to Mr. Palmer, a Radio Amateur from Dallas, Texas and former Engineering Technician with the Heath Company in Benton Harbor, Michigan. The first IARN KIDS PROJECT international conference will be held in Belgrade Lakes, Maine this Summer. Mr. Palmer will appear as Glenn Baxter's special guest in a weekly series about the KIDS PROJECT over the K1MAN amateur radio short wave bulletin service beginning with the 12 January 2003 program. There is also a new web page for the IARN KIDS PROJECT. Go to www.K1MAN.com and click on IARN AMATEUR RADIO PEACE CORPS KIDS PROJECT. Mr. Palmer can be reached for further comment at 214 375 8958. His E-Mail is jwpalmer3wb8tuz@earthlink.net

Mr. Baxter, K1MAN, is a former Industrial Engineer with the Collins Radio Company (Automatic Process Division) in Cedar Rapids, Iowa. Mr. Baxter stated that "I can't imagine any Radio Amateur who would be any

happier than those who have been in the engineering cultures of the Heath Company or the Collins Radio Company. The American Amateur Radio Association is a major sponsor of the IARN AMATEUR RADIO PEACE CORPS KIDS PROJECT," said Mr. Baxter. For more information go to www.K1MAN.com.

IARN AMATEUR RADIO TALK PROGRAM

You can listen to the program on 14.272 MHz. USB or 3.977 MHz. LSB at 5:30 A.M., 1 P.M., and 8 P.M., or 3.890 MHz. Amplitude Modulation at 6:23 PM, and 9:30 PM, all Eastern Local Times. See www.K1MAN.com for further details. The talk show call-in number is 1-800-262-9543

AARA Telephone: 207 495 2215 E-Mail - K1MAN14275@aol.com Talk show call-in number is 1-800-262-9543

FOR IMMEDIATE RELEASE

Wall Street Journal, W5YI, World Radio, QST, Amateur Radio Newsline, CQ, W2NSD, and the American Amateur Radio Association world wide distribution list:

de K1MAN

8 January 2003, Belgrade Lakes, Maine

IARN AMATEUR RADIO PEACE CORPS/CREW 22 TEACHER'S MEETING

The first annual teacher's meeting about introducing amateur radio, as a means to help at risk children with career and other important life choices, will be held in Las Vegas on 12 July 2003. The meeting is being organized by Joe Fairclough, WB2JKJ, in cooperation with IARN and partial sponsorship by AARA, the American Amateur Radio Association. Joe can be reached at 516 674 4072 or E-Mailed at joeee1621@aol.com for further comment or go to www.K1MAN.com and click on IARN Amateur Radio Peace Corps Peace Kids Project for further information and other informative internet links.

Mr. Fairclough, a dedicated and energetic teacher, has been honored for his innovative amateur radio work with kids at the Dayton Hamvention and also has numerous other awards in this area. Glenn Baxter, K1MAN, and President of the IARN Amateur Radio Peace Corps Foundation, Inc. said that he is "delighted to combine forces with Mr. Fairclough and his Crew 22 machine in New Your City because we need his vast experience and energy with regard to educating at risk kids, and he needs our significant resources and energy with respect to getting the word out world wide that we are going, big time, to reach a lot of people and influence a lot of children out there in a very major way. Mr. Fairclough will be on our world wide K1MAN amateur

radio short wave talk program this week beginning 12 January 2003."

Mr. Baxter also said that "We still need speakers for the Los Vegas teacher's meeting, and all those interested in speaking or attending this first annual meeting should go to www.K1MAN.com for more information or else call Mr. Fairclough at 516 674 4072 to make arrangements and/or reservations."

IARN AMATEUR RADIO TALK PROGRAM

You can listen to the program on 14.275 MHz. USB or 3.975 MHz. LSB at 6:30 AM, 1 PM, 4 PM, 8 PM, 1 AM and 3:30 AM or 3.890 MHz. AM at 6:30 PM, all Eastern Local Times. See www.K1MAN.com for further details. AARA Telephone: 207 495 2215 FAX 2069 E-Mail - K1MAN14275@aol.com Talk show call-in number is 1-800-262-9543

IARN ACTIVATION STATUS
IARN EMERGENCY TRAFFIC AND INFORMATION:

IARN is not currently activated.

IARN EMERGENCY TRAFFIC ACTIVATION LEVELS

LEVEL I - Emergency and health and welfare traffic for the affected area(s) is being E-MAILED to IARNtraffic@aol.com plus a 24 hour IARN AMTOR mail box on 14.127 MHz. LSB, SEL call KMAN.

LEVEL II - Same as Level I plus live nets on 14.275 MHz. USB. Also IARN HF bulletins are now on 14.272 MHz. USB; 3.977 MHz. LSB; and 3.890 MHz. AM. (Go to www.K1MAN.com for further emergency network information.

LEVEL III - Same as Level II plus deployment of volunteer radio operators with radio equipment and portable generators to the affected area(s) to hand carry all accumulated network traffic plus set up amateur radio stations in public places and/or shelters to solicit outgoing traffic. Radio jump team volunteer operators should pre-register by calling IARN headquarters at 207 495 2215. See www.K1MAN.com for further details and information.

Note: Radio amateurs and short wave listeners should monitor 14.272 MHz. USB; 3.977 MHz. LSB; and 3.890 MHz. AM. Call your local radio and/or T.V. stations and tell them what you and amateur radio are doing. Give them your telephone number and your E-MAIL address (or IARN traffic@aol.com) for the gathering of emergency and health and welfare traffic for the affected area(s).

See www.K1MAN.com

IARN AMATEUR RADIO TALK PROGRAM

You can listen to the program on 14.272 MHz. USB or 3.977 MHz. LSB at 5:30 A.M., 1 P.M., and 8 P.M., or 3.890 MHz. Amplitude Modulation at 6:23 PM, and 9:30 PM, all Eastern Local Times. See www.K1MAN.com for further

details. The talk show call-in number is 1-800-262-9543

Yes truly Mr Baxter's leadership qualities have inspired the
magnificent volunteer effort in storm stricken Florida. Baxter
is a humanitarian of rare dedication, unselfish and giving, an
international symbol of goodwill around the world. We salute
K1MAN, the voice of international goodwill and peace, on a
people-to-people basis.

Don't forget your IARN credit card and the IARN Tee Shirt when you travel.

Oh BTW.....give me ONE EXAMPLE of a IARN JUMP TEAM that is either STILL in Florida/Alabama, or actually deployed to affected area's??? Don't bother with the spin BS. The answer is ZERO.

If you want to see REAL emcom (Emergency Communications) going on check out the Satern net, Hurricane Watch net, State and area NTS (National Traffic

System) network and ARES (Amateur Radio Emergency Services) and RACES and MARS nets.

The IARN is a total and complete FARCE. I know of one person that seriously believes a thing Baxter says....oh correction I know of TWO people....One is Baxter himself and the other is LLLLLLOOOOOYYYYYYDDDDD a TOTAL IDIOT.

Glenn Baxter, K1MAN, and John Palmer, WB8TUZ, of Dallas, Texas, announced today the kick-off of their new IARN AMATEUR RADIO PEACE CORPS KIDS PROJECT. This nationwide and even world wide project will systematically introduce Amateur Radio to minority kids world wide for educational, motivational, and discipline learning purposes with the intent of "Helping kids to make good career choices" according to Mr. Palmer, a Radio Amateur from Dallas, Texas and former Engineering Technician with the Heath Company in Benton Harbor, Michigan. The first IARN KIDS PROJECT international conference will be held in Belgrade Lakes, Maine this Summer. Mr. Palmer will appear as Glenn Baxter's special guest in a weekly series about the KIDS PROJECT over the K1MAN amateur radio short wave bulletin service beginning with the 12 January 2003 program. There is also a new web page for the IARN KIDS PROJECT. Go to www.K1MAN.com and click on IARN AMATEUR RADIO PEACE CORPS KIDS PROJECT. Mr. Palmer can be reached for further comment at 214 375 8958. His E-Mail is jwpalmer3wb8tuz@earthlink.net

Mr. Baxter, K1MAN, is a former Industrial Engineer with the Collins Radio Company (Automatic Process Division) in Cedar Rapids, Iowa. Mr. Baxter stated that "I can't imagine any Radio Amateur who would be any happier than those who have been in the engineering cultures of the Heath Company or the Collins Radio Company. Mr. Palmer brings much of the fabulous Heath engineering culture into our IARN and AARA organizations, and we are all thrilled to have him aboard. Mr. Palmer's dad was a black high school principal in Missouri, and also brings a culture of innovative teaching and the education of bright children into IARN and AARA. The American Amateur Radio Association is a major sponsor of the IARN AMATEUR RADIO PEACE CORPS KIDS PROJECT," said Mr. Baxter. For more information go to www.K1MAN.com.

I had to give up volleyball a decade back. The repeated ankle sprains and my aging knees were the reason. I hunt, kill, cook and consume animals and have been known to dangle a fishing line. In other sports, my role is much the same as Len Anderson's in amateur radio: I'm a spectator.

If the gangrenous degeneration that is the M3/CB Fools' Licence
here in Britland is anything to go by, the program described below
will be a big mistake, for it will flood the bands with those who
are not technically motivated in themselves. Ham Radio is a technical
pursuit and kids simply do not have the mathematical background to
enable them to do even the simplest of resistances-in-parallel
calculations.

A bit of a non-sequitur there, OM.

There is no reason to "get kids involved"

Ham Radio is made up of those who are sufficiently
interested to get themselves involved, and to educate
themselves. Those who are led by the hand will never be
anything more than CB fodder.

> Who? Why?]
>
> Interestingly, as part of this Faustian bargain, Riley apparently forbade
> ND8V to operate on 14.313 MHz--something he may not have had authority in
> law to do. But what is truly odd, when ND8V returned to HF--surprise,
> surprise ~a month before K1MAN's published intension to resume his
> Bulletins--he relocated to 14.275 MHz! With virtually the entire 20 m Band
> for ND8V to choose from, this was not entirely serendipitous....
>
> ND8V returned to HF in September 2001 after 'serving' only eight of the
> nine
> month suspension [Riley can't count] and virtually immediately was
> [surprise, surprise] back in trouble again. Riley was again forced to use
> the wet noodle, i.e. to issue another Warning Letter that, for reasons
> still
> unclear, but likely related to the Faustian bargain, appears to have again
> 'gone away' without significant or indeed any consequences.
>
> Immediately upon K1MAN's return, he was [surprise, surprise] subjected to
> organized and vicious interference (QRM) by ND8V and his toadies from the
> zoo on 14.313 MHz now increasingly congregating on 14.275 MHz.
> [Interestingly, most of these were/are from the 4th Call District.]
> Riley/the FCC reportedly sat back and listened, but pointedly took no
> action. Curiously, however, between this relentless QRM'ing and otherwise
> bad mouthing of K1MAN and inconvenient/neighbouring others, ND8V could be
> heard loudly praising Riley--in nauseating fashion--the just completed
> suspension and by now extensive 'rap sheet' at the FCC and elsewhere
> notwithstanding.... Things were getting curiouser and curiouser....
>
> Within yet another month or two, ND8V organized another attack, this time
> on
> a Polish-speaking amateur from New York City (the New Yorker), on the
> neighbouring frequency of 14.273 MHz for in effect usually speaking in a
> foreign language and being too close to "his" newly chosen frequency. Now,
> 14.273 MHz had for only some fifty years unofficially been known/used as
> the
> worldwide 'Polish Calling Frequency'. For the obvious reasons, many
> consider
> such informal arrangements a very effective and efficient use of the radio
> spectrum. But, this was shortly after "9/11" and ND8V's apologists say
> that
> he should be forgiven for this misguided sense of 'American patriotism'..
>
> Surprise, surprise, this attack on the sometime Polish-speakers generally
> and on the New Yorker in particular had a similar modus operandi (MO) to
> that used a year earlier on the Hispanics! ND8V also in quick succession
> organized his toadies from 14.275 MHz to write two transparently
> fictitious

> complaints to Riley against the New Yorker. Perversely, these involved
> allegations of 'perceived' overly-wide signals and interference no less,
> backed up by the 'thinnest' of malicious 'drivel' off the Internet. One
> concerned chiefly what were clearly fraudulent rebroadcasts of the New
> Yorker's CQs [they taped and retransmitted his signals on top of their own
> and then complained to Riley about it!]. To even casual observers, this
> was/is the well-known MO of CB'ers and together with voice imitations,
> was/is a recognized specialty of the zoo in general and ND8V in
> particular.
> As such, the complaints were an obviously 'put up job'.
>
> Nevertheless, without checking the bona fides of the complaints or their
> chief instigator/organizer, or apparently doing any independent
> investigation whatsoever, Riley obligingly quickly issued two Warning
> Letters in succession to the New Yorker. These were then published on the
> ARRL website. This was/is Riley's standard operating procedure. Several
> knowledgeable and legally trained observers have aptly called this
> approach
> to enforcement "Trial By Press Release". [The ARRL's by-and-large noble
> institutional memory should be ashamed to be party to this.]
>
> These Warning Letters emboldened ND8V who was then openly heard bragging
> to
> his toadies that he would drive the sometime Polish-speakers off the
> neighbouring frequency in general and the New Yorker off the air in
> particular.
>
> Then, two of the sometime Polish-speakers on 14.273 MHz [one American and
> one Canadian] stepped into the breach and attempted to defend their fellow
> amateur..
>
> Initially, first the American and then the Canadian helped the New Yorker
> draft and send three lengthy and increasingly detailed double-registered
> letters of reply to Riley--not one of which to-date has even been
> acknowledged!
>
> The American then sent a double-registered letter covering an audiotape
> evidencing malicious QRM and a death threat to the New Yorker uttered by
> none other than--surprise, surprise--'Dumbo Bobbie' WD4AWO--one of the
> original complainants and ND8V's regular toady from the backwoods of
> Tennessee. For some curious reason, Riley has not to-date deigned to
> acknowledge this serious incident either..
>
> Over the next several months the Canadian followed up with some 20
> detailed
> e-mails, each one evidencing at least one instance of serious malicious
> QRM
> by ND8V. After several insistent prompts Riley finally laconically if
> inarticulately acknowledged some of these--not to be confused with

> answering
> them--but of course he did nothing substantive about them as usual..
>
> Then, after about six months of this benign neglect--and worse--and the
> continuing vicious attacks by ND8V, Riley finally attempted to placate the
> increasingly irate Canadian by advising that he would hold a review of
> ND8V'
> s licence status at his upcoming renewal time. Inexplicably, however, a
> couple of months later, Riley/the FCC renewed ND8V's licence without any
> review whatsoever! When confronted about this by the Canadian, Riley
> professed utter surprise and blamed the supposed error on some
> administrative 'foul-up'. Others thought/think otherwise..
>
> Then, after nearly a year of inaction and 'flip flops', the Canadian
> finally
> read Riley the 'riot act'..
>
> Riley's reply to this 'dressing down' was apoplectic, but informative for
> a

>>>
>>>Now that I do know. Yes it was. A colleague worked with it during the
>>>early 70's.
>>>
>>>But! What does all this military stuff have to do with Ham radio. We
>>>are not military.
>>
>>Here's "the short version", Mike:
>>
>>There *was* a time when the US military (all branches) used Morse Code for
>>radio communications - extensively. Of course after about 1920 or so they
>>used
>>other modes too, but Morse Code on military radio played a central role in
>>WW2
>>and for many years afterward.
>>
>>Of course Morse Code for military communications suffers from some basic
>>problems: It's slower than some modes, particularly RTTY, and it requires
>>the
>>use of skilled operators at both ends of a circuit (RTTY requires only that

>>the transmitting op know how to type).
>
> Morse code is slower that ALL modes. Tell the truth.

Morse Code is *not* slower than "all" modes.

> Yes, all must "know how to type" on a teleprinter...look at the keys,
> read their tops, press the appropriate key, see it appear on paper or
> screen. Difficult. Hi hi.

And the importance of this is?

>>Once upon a time, the need for trained Morse Code radio operators was given
>>as
>>a valid reason for ham radio having a Morse Code test, because hams would
>>then
>>form a source of self-trained candidates for the military. In both World
>>Wars,
>>there arose times when the US military needed to rapidly expand their number
>>of
>>Morse Code radio operators, and many of them came from the ranks of hams >>of
the time.
>
> World War 2 ended 59 years ago.

Morse Code use by the US military did not end 59 years ago.

>
>>Of course the US military has pretty much completely phased out the use of
>>Morse Code for radio communications. Probably the last extensive use ended
>>with
>>1997, when the Coast Guard ended its maritime Morse Code operations.
>
> Not "pretty much." COMPLETELY.

Then what are those folks at Ft. Huaracha (sp?) doing?

Gee, Len, you argue even when someone agrees with you and backs up your
argument.
>
>>There may be some very specialized uses for Morse Code in the US military
>>left
>>today, but that's all. Heck, the Navy doesn't even have a "Radioman"
>>title/MOS/job description anymore. So that old reason for a Morse Code test
>>has lost its validity over time.
>
> Old legends die with difficulty...but they DO die...

What legend? Once upon a time, that reason was valid. Not any more.

>>Where Len fits into all this is that he was at ADA in Japan in the early
>>1950s.
>>He worked on their radio transmitters there. Their main radio task was long

>>distance communications back to the Pentagon and other locations around the
>>Pacific. ADA didn't use Morse Code; all the messages went by RTTY on fixed,
>>predetermined frequencies determined mostly by propagation.
>
> Tsk. Operations and Maintenance. Supervisor.

Did you start out as Supervisor?

Did you work on receivers? Antennas? Or just transmitters?
>
> NONE of the stations in ACAN used morse code for communicaitons. Still
> don't after 51+ years.

ACAN isn't all US military communications.
>
>>Len apparently thinks that because ADA transmitter technicians didn't need

>>Morse Code to do their jobs in 1952, amateur radio operators shouldn't have
>>had
>>to know Morse Code to get amateur radio licenses for many years before
>>2004.
>
> Nice reducto ad absurdum non-summation.

Reductio ad absurdum is a valid logical technique.

> Tsk, you forget that a station
> in the ACAN was my FIRST exposure to the Big Leagues in HF comms.
> It wasn't the last.

So what? Amateur radio isn't in ACAN.

> Experience and observation of the past half century has
> shown that morse code testing is nothing more than an artificiality, a
> fallacy in thinking kept alive by fantasy belief systems of olde-tymers in
> hamme raddio.

That's your *opinion*. Mine is different. But you want my opinion silenced.
>
>>Of course, as you say, "we're not military", so that logic is faulty. But
>>it's
>>what Len is yelling about here.
>
> Am I "yelling?"

Yes.

> Heh heh, I don't think so.

DOS tip: When you use all capitals, you're yelling. You do that a lot, Len.

>>Some time back, I posted a short description (written by others) of
>>operations
>>at radio station WAR early in 1942. Included a description of the use of
>>Morse
>>Code their. Len went ballistic on that one.
>
> Tsk, tsk. "Ballistic?" Hi hi.

Yes - you were really ticked off.
>
> WAR (Washington Army Radio) was the biggest station in ACAN. In 1953
> it was all teleprinter for communications...and DURING WW2 the major
> communications mode was teleprinter, not the alleged morsemanship stuff
> implied in that "short description" written by another.

Were you at WAR when the article was written?

>>Further back, I posted a description of one of the code test used at US Navy
>>Radioman "A" school in 1958 (24 wpm, 5 letter code groups, copy on a
>>typewriter. Maximum allowable errors: 3 in a one-hour session). I don't
>>recall a favorable reaction from Len...
>
> Poor baby. Want me to gush about morsemanship? That's asking for
> too much... :-)
>
> 1958 is 46 years ago.

Also 13 years after WW2 ended.

> Times have changed a bit since then. Really.

The point is that "big league HF radio military communications" used Morse Code
and trained operators years after you seem to claim it was no longer needed...

>>Even earlier, another amateur and professional radio operator (Jeff Herman)
>>posted a fascinating description of what it wa like to operate Coast Guard
>>radio at NMO in Hawaii. Included lots of Morse Code - well into the 1990s.
>>Len's reaction was the now-famous "sphincter post"....
>
> "Famous?" I don't think so. In your mind, perhaps.

A lot of us here remember it. An amusing rant, showing that you attack *any*
use of Morse Code...

> Tsk. Jeff Herman is a "lecturer in mathematics at a university!"
> In reality he is an instructor at a junior college...based on another
> little back-and-forth we had...from references of the junior college
> website and instructor listing.

Why is that relevant?

Did he not operate NPM, as described in his writings?
>
> Morsemanship allows one to use Titles such as "lecturer?" Hi hi.

It allowed him to operate NPM "professionally".
>
>>>>>>>>Perhaps Len wants *all* amateur radio tests eliminated.
>>

Give me the calls of those involved. I will check it out, and if you are
due a apology you will get one. If not then you know what will happen.

As for me saying hi to Kerry. It is more like I will say goodby to Kerry. He is another example of the mindset of people like you. You know the one...." Don't confuse me with the facts".

As for Vietnam......I guess I am. And a good thing I am too. Because I KNOW KERRY is a FARCE, just like the IARN.

>>>
>>OK - let's say, just for the point of discussion, that your source is
>>right on the money.
>
> Just for the point of the discussion consider that nursie is a LIAR.

Why?

And who is "nursie"?

Can you not tolerate a hypothetical discussion, Len? It seems that way.

> Nursie has NO such name. That individual is a fabrication of his
> fantasy world.

How do you know?
>
> Nursie CAN'T name any names becuase no such person exists.

Prove it!

Do you really expect us to believe that over decades long "vareer in radio
electronics", that there is not a single person you encountered who would say
what has been claimed?
>
>>That only covers one time period at one facility. Len tells us he has
>>worked a lot of places over a long period of time. One
>>less-than-stellar job does not a career ruin.
>
> Tsk. "Less-than-stellar." :-)

Yes.

Perhaps the report is true. Perhaps it isn't. Even if true, it is the opinion
of just one person at just one place and time.

Do you think one such report somehow discredits an entire career?

> I completed a career, don't have to put in regular hours anymore.

So what? Does that somehow make you more qualified to set amateur radio policy
than those still working "regular hours"?

Unless I'm mistaken, Dave Heil, K8MN, completed a career and is now retired.
And he did it in a lot less years than you did, Len. Plus he was in the US
military and in government service - and an active radio amateur.

By your logic, he's more qualified to determine amateur radio policy than you.
>
> Don't you just HATE it when someone ruins your ranting? :-)

It appears you do....
>
>>> >Besides - it's not the issue.
>>>

Thank you, Len.

>>He's never had an amateur radio license
>
> True.
>
>>Never worked as any sort of licensed radio operator in any other radio
>>service
>
> WRONG. INCORRECT. ERROR!

Why the shouting?

If it's not correct, give is the info.

Where and when did you work as a licensed radio operator, Len? And in what
radio service?

>>Never been involved in radio regulatory matters other than writing
>>voluminous comments to FCC,
>
> Tsk. Jimmie hasn't been any sort of radio regulator.

Not the issue.
>
>>Never manufactured or designed any equipment for hams
>

I know all about that. Has nothing to do with phase noise as has been discussed
here.
>
> Jimmie's ham world doesn't have buzzwords. It has only the most
> modern of things. Like kluge-looking transceivers built from recycled
> parts and tubes in the 1990s.

It is interesting that you are hung up on appearance and parts origins rather
than how well something works.
>
>>Yet he tries to tell us that his professional background somehow makes

>>should determine policy for sailboats.
>
> Tsk, despite saying that twice, the point wasn't made.

Show us where it's not a valid statement, then. I'm on the outside looking in
when it comes to the LPGA and sailboat policy. You're on the outside looking in
when it comes to both amateur radio and the FCC.
>
> Like it or no, the FCC still does NOT require any staffer or
> commissioner to hold an amateur radio license in order to regulate
> U.S. ham radio.

But it *does* require them to be qualified according to the standards of the
FCC. You're not qualified that way. And you're not on the FCC, and never have
been.
>
> Don't you just HATE it when someone brings reality into a simple

> Apples are red, therefore roses are apples.

Except that not all roses are red, and not all apples are red.

I ran Steve in circles with your logic. He then tried saying that
-ALL- MARS radio operators were Amateur Radio volunteers. I showed
that not all MARS radio operators are amateurs.

Then he switched to "MARS would cease to exist without amateur volunteers," which is where his current state of the art thinking sits.

Or we could go: Dogs are
> carnivores, bears are carnivores, therefore dogs are bears.

Then why don't you? See if Steve will buy into it.

> Dee D. Flint, N8UZE

Best of luck.

Unfortunately, everything I said was true.

Grownups can accept it. Bully's don't like it.

Short of flying bricks and slashed tires, that's the best that that
newgroup bully can muster. Time to check-up on my wife.

Indeed. It would appear that Jim is one "...?!?!" away from telling
Steve that he's making an ass of himself.

> >And if YOU wrote them, do you not take responsibility for them?
>
> Maybe not...

Indeed I did not! Steve read the attributions incorrectly. Hi, hi!

> >Do you really NOT mean what you say...?!?!
>

> True.

Not true. We can start with Steve's wrongness wrt MARS.

And being a bully requires only the strength of conviction that others
are beneath you. Work on that.

> But all that can get obscured by the shouting and name-calling.

You think?

> Most of all, you *know* that you're being intentionally baited. (I recall a
> post where "billy" said he intentionally insults you).

And Steve unintentionally threatens them?

Good grief! Talk about enablers.

> By responding the way
> the other side expects, you lower yourself to their level.

Nope. He lowers himself to the lowest level that -he- can acheive.
And it gets lower all the time. His choice.

> Which is what they
> want.
>
> 73 de Jim, N2EY

I want others to condemn his despicable behavio[u]r; the homosexual
and pedophile inuendo, and the suggestion that if you don't agree with
him that bricks may fly, tires may be slashed, and wives may be
terrorized.

> > Sucks to be you.
>
> If you really believe that, why not have a little pity?

Because Steve's a bully? He has no compassion or empathy.

The people that Steve views as his "peers" enable his sickness.

So he goes on with his vision of himself as the Avenging Angel of Amateur Radio, slashing and purging the RRAP ranks of those he thinks are not worthy.

Madness.

Did you see his incorrect attribution?

His whole argument hinges on the very thing that he got wrong, and
somehow I'm an idiot. Then Jim comes in and pats him on the back.

410. Hey, Steve Robeson. Try reading this closely and tell me where I said, "on the air." Re: US Licensing Restructuring ??? When ???

THE LIFE OF RILEY

Or why Mikee 'Kalamazoo Cuckoo' ND8V was "in like Flynn" and continues to lead a charmed existence with Riley 'Rot' Hollingsworth K4ZDH

Once upon a time in America there came to be a giant of an organization called the American Radio Relay League (ARRL).

Much later, there appeared a shy and lonely radio amateur with the 'self-effacing' call sign K1MAN [HI, HI].

Sometime, somewhere, somehow yet later K1MAN came to the rather obvious conclusion that large organizations/associations, such as the ARRL or the Federal Communications Commission (FCC), in time lose touch with the constituents they are supposed to serve. This was not news, in that it has always been so.

Unlike others, who only 'bitched' about it, however, K1MAN decided to start a Bulletin service on 14.275 MHz a la the ARRL's W1AW in part to poke sticks into the respective eyes of both one-eyed Cyclops.

Surprise, surprise, the ARRL/FCC did not put K1MAN on their respective Christmas card lists.... Rather, they attempted to shut K1MAN down. Years and much effort later, they appear to have failed, at least to the extent that K1MAN remains on the air.

Concurrently and arguably partly as a result of K1MAN's so-called "bad example", a group of rogue Citizens Band (CB) operators with an amateur licence [and others without], decided to congregate on 14.313 MHz which frequency in time became a veritable 'zoo'. This was during the time when the amateur spectrum was supposedly 'self-governing/policing'....

Then, some four years ago the ARRL reportedly proposed and the FCC agreed to hire one Riley Hollingsworth K4ZDH as a 'radio cop', to clean up the 'amateur beat' generally. In reality, there were arguably only two items on Riley's immediate agenda: K1MAN on 14.275 MHz and the mess on 14.313 MHz but for the obvious and not so obvious reasons, very much in that order.

Unfortunately K1MAN had in the meantime contracted to teach full-time and as a consequence had to take a sabbatical from producing the time-consuming Bulletins. Then, at a series of 'hamventions', Riley the radio cop apparently loudly took credit for driving K1MAN off the air.... This played well at the FCC and among the 'great unwashed' and uninformed in the amateur community and earned Riley the moniker 'The Rotweiler'. Predictably, this had the same effect on K1MAN as a scarlet handkerchief has on a bull. K1MAN

consequently let it widely be known that he would be back with a vengeance and as they say in show business, the stage was set....

In the meantime, Riley continued to ineffectively try to come to grips with the zoo on 14.313 MHz. ND8V a.k.a. 'Kalamazoo Cuckoo' to friends and detractors alike, was one of the chief rabble-rousers there. He had attacked Hispanic-speaking stations "for years" calling them cockroaches, interfered with a maritime mobile net and threatened--on and off the air--any number of amateurs who stood up to his bullying. Throughout this, Riley did virtually nothing. Then, when even the US military reportedly had enough of ND8V's behaviour and caused a search to be made of his station, Riley 'The Rotweiler' was finally forced to act. He severely beat ND8V up--with a 'wet noodle'--by supposedly suspending his High Frequency (HF) privileges for a curiously 'pregnant' nine months! This again played well at the FCC and even in the amateur community, to whom 14.313 MHz in general and to some ND8V in particular, had become such an acute embarrassment.

Unfortunately, Riley had for some strange reason also made a 'Faustian bargain' with ND8V in part to the effect that if he behaved himself for the duration of the suspension, he would [surprise, surprise] be rewarded! All of his past sins were to be forgiven and forgotten--and what is most perverse--could not be used against him in subsequent disciplinary proceedings.... [Obviously, someone had turned their mind to the possibility--some say inevitability--of subsequent disciplinary problems. Who? Why?]

Interestingly, as part of this Faustian bargain, Riley apparently forbade ND8V to operate on 14.313 MHz--something he may not have had authority in law to do. But what is truly odd, when ND8V returned to HF--surprise, surprise ~a month before K1MAN's published intension to resume his Bulletins--he relocated to 14.275 MHz! With virtually the entire 20 m Band for ND8V to choose from, this was not entirely serendipitous....

ND8V returned to HF in September 2001 after 'serving' only eight of the nine month suspension [Riley can't count] and virtually immediately was [surprise, surprise] back in trouble again. Riley was again forced to use the wet noodle, i.e. to issue another Warning Letter that, for reasons still unclear, but likely related to the Faustian bargain, appears to have again 'gone away' without significant or indeed any consequences.

Immediately upon K1MAN's return, he was [surprise, surprise] subjected to organized and vicious interference (QRM) by ND8V and his toadies from the zoo on 14.313 MHz now increasingly congregating on 14.275 MHz. [Interestingly, most of these were/are from the 4th Call District.] Riley/the FCC reportedly sat back and listened, but pointedly took no action. Curiously, however, between this relentless QRM'ing and otherwise bad mouthing of K1MAN and inconvenient/neighbouring others, ND8V could be heard loudly praising Riley--in nauseating fashion--the just completed suspension and by now extensive 'rap sheet' at the FCC and elsewhere notwithstanding.... Things were getting curiouser and curiouser....

Within yet another month or two, ND8V organized another attack, this time on a Polish-speaking amateur from New York City (the New Yorker), on the neighbouring frequency of 14.273 MHz for in effect usually speaking in a foreign language and being too close to "his" newly chosen frequency. Now, 14.273 MHz had for only some fifty years unofficially been known/used as the worldwide 'Polish Calling Frequency'. For the obvious reasons, many consider such informal arrangements a very effective and efficient use of the radio spectrum. But, this was shortly after "9/11" and ND8V's apologists say that he should be forgiven for this misguided sense of 'American patriotism'..

Surprise, surprise, this attack on the sometime Polish-speakers generally and on the New Yorker in particular had a similar modus operandi (MO) to that used a year earlier on the Hispanics! ND8V also in quick succession organized his toadies from 14.275 MHz to write two transparently fictitious complaints to Riley against the New Yorker. Perversely, these involved allegations of 'perceived' overly-wide signals and interference no less, backed up by the 'thinnest' of malicious 'drivel' off the Internet. One concerned chiefly what were clearly fraudulent rebroadcasts of the New Yorker's CQs [they taped and retransmitted his signals on top of their own and then complained to Riley about it!]. To even casual observers, this was/is the well-known MO of CB'ers and together with voice imitations, was/is a recognized specialty of the zoo in general and ND8V in particular. As such, the complaints were an obviously 'put up job'.

Nevertheless, without checking the bona fides of the complaints or their chief instigator/organizer, or apparently doing any independent investigation whatsoever, Riley obligingly quickly issued two Warning Letters in succession to the New Yorker. These were then published on the ARRL website. This was/is Riley's standard operating procedure. Several knowledgeable and legally trained observers have aptly called this approach to enforcement "Trial By Press Release". [The ARRL's by-and-large noble institutional memory should be ashamed to be party to this.]

These Warning Letters emboldened ND8V who was then openly heard bragging to his toadies that he would drive the sometime Polish-speakers off the neighbouring frequency in general and the New Yorker off the air in particular.

Then, two of the sometime Polish-speakers on 14.273 MHz [one American and one Canadian] stepped into the breach and attempted to defend their fellow amateur..

Initially, first the American and then the Canadian helped the New Yorker draft and send three lengthy and increasingly detailed double-registered letters of reply to Riley--not one of which to-date has even been acknowledged!

The American then sent a double-registered letter covering an audiotape evidencing malicious QRM and a death threat to the New Yorker uttered by none other than--surprise, surprise--'Dumbo Bobbie' WD4AWO--one of the original complainants and ND8V's regular toady from the backwoods of Tennessee. For some curious reason, Riley has not to-date deigned to acknowledge this serious incident either..

Over the next several months the Canadian followed up with some 20 detailed e-mails, each one evidencing at least one instance of serious malicious QRM by ND8V. After several insistent prompts Riley finally laconically if inarticulately acknowledged some of these--not to be confused with answering them--but of course he did nothing substantive about them as usual..

Then, after about six months of this benign neglect--and worse--and the continuing vicious attacks by ND8V, Riley finally attempted to placate the increasingly irate Canadian by advising that he would hold a review of ND8V's licence status at his upcoming renewal time. Inexplicably, however, a couple of months later, Riley/the FCC renewed ND8V's licence without any review whatsoever! When confronted about this by the Canadian, Riley professed utter surprise and blamed the supposed error on some administrative 'foul-up'. Others thought/think otherwise..

Then, after nearly a year of inaction and 'flip flops', the Canadian finally read Riley the 'riot act'..

Riley's reply to this 'dressing down' was apoplectic, but informative for a change. He wrote that the Canadian should not bother him with "blow-by-blow" details--each one carefully crafted as a possible exhibit to any number of affidavits! Riley also stated that he had "just noticed" that the writer was a Canadian amateur!! This, recall, after more than 20 e-mails, all except one of which [a forward from the American] were very clearly identified with a Canadian call sign!!! The logical conclusion to be drawn from this is that Riley is either grossly inattentive to detail and/or that he doesn't recognize a Canadian call sign when he sees one some 20 times in succession and/or that he is disingenuous [for those not familiar with the last word, look it up under "L" in the dictionary]. Irrespective, Riley thereby very arguably proved himself to be unfit for the important position that he holds..

In his reply, Riley also unilaterally changed 'the rules of engagement' in mid-stream and suggested that the Canadian send him audiotapes instead of the blow-by-blow e-mails. It is interesting to note in passing that the form of complaint to the FCC is nowhere specified. In fact, an FCC Commissioner had shortly before this delivered a 'rocket' to the Enforcement Bureau [of which Riley is Special Counsel, you might recall] on this very point. Also, there are serious and possibly insurmountable evidentiary problems with tapes made by 'various and sundry'.

Nevertheless, the Canadian subsequently sent Riley a detailed letter covering a tape recording of a typical example, among others, of ND8V's usual sociopathic QRM. This incident was even independently corroborated by a station from California--which was 2 kHz down and was contemporaneously also maliciously QRM'ed by ND8V--and luckily caught on the same tape! Despite this 'double whammy', from two independent sources that did not previously know each other, Riley never replied to the Californian [a retired Sergeant of police, incidentally] and only grudgingly acknowledged the 'pesky' Canadian. But, to-date, he has taken no substantive action on the incidents as usual..

All the while ND8V perversely continued to praise Riley on the air as if he were his 'long lost bud' and bragged about unprecedented access to and sometimes daily telephone contact with him [while practicing attorneys regularly could not get through].... To subjective and objective observers alike, things were not only getting curiouser and curiouser, but increasingly bizarre....

Then on 25 November 2002 Riley wrote ND8V an unprecedented strong Warning Letter noting that the FCC continues to receive complaints about him concerning the ".appropriation of certain frequencies." and ".interference to certain operators". Riley inter alia cautioned that: "Any future incidents.even a single incident, will result in a monetary forfeiture and revocation proceeding against your license" and requested that ND8V refrain from operation on the 20 m Band. This unprecedented '.last warning, to last warning, to last warning, etc....' was again based on multiple, independent and well-founded complaints from several amateurs operating tens of kHz apart. At least two of these complaints were from mature, highly credible and wholly independent sources who did not then even know of the other's existence [but Riley obviously knew--and gave both the "mushroom treatment"]. Interestingly, both of these sources were also legally trained.. Moreover, one of the complaints was in addition reduced to/backed up by a very persuasive/extensive Statutory Declaration/Affidavit..

Surprise, surprise, distressingly similar historical fact patterns and well-founded/drafted independent complaints notwithstanding, ND8V was able to dispose of them via only one "private" telephone call to his 'bud' Riley! Therein, in true sociopath style [aided by his "calm voice characteristics" no doubt--ND8V later bragged about this on-air], he simply described the multiple independent and unconnected complaints to Riley as "all lies". Now Mikee is an accomplished practitioner of 'The Big Lie' approach. But, what is nevertheless so inexplicable and bizarre in the circumstances is that Riley obviously 'bought' this preposterously 'thin' excuse!

STOP PRESS!

SPECIAL COUNSEL RILEY 'ROT' HOLLINGSWORTH K4ZDH AGAIN SNOOKERED BY 'CALM VOICE CHARACTERISTICS' OF MIKEE 'KALAMAZOO CUCKOO' ND8V..

After receiving such 'unimpeachable evidence to the contrary' from ND8V--Riley then shamelessly rescinded the Warning Letter--before it was even published!!!

This again of course only emboldened ND8V who then sold his perfectly serviceable FT-1000D and bought an IC-756 PRO--so as to more effectively 'keep watch' on and 'splatter' the sometime Polish-speakers especially, in what he instructively called "War Mode". Subsequently, according to ND8V and his toadies, 14.275 MHz and vicinity was "always occupied", even when no one was using it! ND8V published a "schedule" to that effect on QRZ.com and anyone--but especially the sometime Polish-speakers--attempting to use any frequency between ~14.270 MHz and ~14.280 MHz would then immediately be 'stomped on' and/or [surprise, surprise] loudly and perversely be accused of interfering with him!

If a few of the sometime Polish-speakers [eventually there were only two!] could not thus be chased off and stood their ground, ND8V would then threaten them with being reported to his "friend and lawyer", Riley. For effect, he would even occasionally pass out Riley's direct/private telephone numbers! He also repeatedly threatened the Canadian with a report to Industry Canada (IC), the Canadian equivalent of the FCC [and equally ineffective]. All the while ND8V's regular toadies [chief among them 'Rambo Dan' W4NTI, 'Dumbo Bobbie' WD4AWO, 'Rude Rube' K4RUB and 'Miami Boob' W4ASX to partially name only a few of the more unbalanced and guilty], were ready and more than willing in the background to uncritically back him up in whatever he said or did.. Soon, no one--'rednecks' from the 4th Call District and/or ND8V's usual sycophants excepted--was safe in the middle of the 20 m Phone Band! All the while Riley/the FCC and even IC, despite being repeatedly advised, did nothing..

The American subsequently sent Riley another handful of double-registered letters covering some dozen tapes/instances of serious malicious QRM by ND8V. But of course Riley did not acknowledge this considerable effort and expense either..

Then in February 2003 ND8V together with his toadies organized a series of vicious on-air attacks on the two sometime Polish-speaking holdouts. That these attacks were also premeditated, organized and racially/ethnically driven is beyond question. Several amateurs and even a short-wave listener independently reported ND8V and his toadies 'laying in wait' and preparing for them as such. The attacks were on an unprecedented scale and of ferocious intensity. Many of them literally lasted for hours! Some again involved repeated threats of death and/or bodily harm..

Fortuitously, all of these attacks were taped--including the all-important beginnings--both by the American and the Canadian. This should have 'put paid' to 'who was on first, first and who second', who attacking and who defending, who calling whom racial/ethnic slurs, who threatening, etc. Riley/the FCC [and sometimes IC] were contemporaneously informed and on occasion provided the tapes and/or access thereto.

But again, nothing constructive materialized--actually, quite to the contrary..

Surprise, surprise, 'Kalamazoo Cuckoo' ND8V and 'Rambo Dan' W4NTI--those paragons of American radio amateur virtue--verbally reported the Canadian to IC and the American to the FCC! Because Mikee can't write, the manner in which they did this is again instructive. First, they repeatedly read out the respective and sometimes toll-free telephone numbers using a continuous loop feature and fraudulently exhorted anyone and everyone listening to call in a complaint. Then [surprise, surprise], they conveniently called the numbers themselves! This, perversely, after first viciously QRM'ing and threatening the American and Canadian--for more than three hours--using the usual full legal power +, a five element mono-bander [typically directed at the Canadian, because the American was too close], in splattering War Mode. All of which, including again as to who first properly occupied the frequency, etc., was/is unequivocally evidenced on tapes independently provided Riley by the American as well as the Canadian!!

Surprise, surprise, the ephemeral nature of verbal complaints and the supposed requirement for tapes/hard evidence, etc., notwithstanding, both of these 'august' organizations were then perversely apparently speedily preparing to act--against the two 'recalcitrant' sometime Polish-speaking holdouts--who so "unreasonably" refused to be driven off any frequency they first lawfully/properly and demonstrably occupied!!!

Almost in desperation, the American then put a $1,000 US 'bounty' for information leading to the arrest, prosecution and conviction of their tormentors/QRM'ers.. Not to be outdone, the Canadian subsequently raised the bounty to $2,000 CDN and for effect added "Dead or Alive", 'Texas/Dubya '-style..

In March 2003 the Canadian also drafted and whenever seriously QRM'ed read to his American colleague for comment, evolving versions of "The Life of Riley"--which ultimately called for Riley's removal from the FCC..

Surprise, surprise, within ~a week of the third weekly 'reading', Riley at long last decided to act--in a manner of speaking. He wrote a letter accusing ND8V of: causing deliberate interference, broadcasting and threatening [the life of the American, no less!]. All of this arising from just one relatively mild attack in the series--lasting only about an hour--on 26 March 2003 as patently incompletely reported by some third party [the identity of which is still unknown].

Nevertheless, Riley again categorically threatened ND8V's licence with: either a suspension and revocation hearing, or a loss of voice privileges for the remainder of the licensing term [i.e. for the next ~nine years]. But, despite the unequivocal nature of the underlying evidence [eventually Riley received three tapes of the same event from three independent sources!] and the relatively strong if curiously obtuse language used, Riley did not call it a Warning Letter..

Moreover, being the petty bureaucrat that he is, Riley did not like having his feet put to the fire, especially in so public a fashion. Thus, even while appearing to take some action against ND8V, he also decided to get even--with [surprise, surprise] the American, being the only one over whom he had some power. Riley disingenuously accused him of conduct ".as bad as or worse than." ND8V. Now, that is a standard indeed!!! Shame on you, Riley!

Incidentally, this was the only substantive communication the American had ever had from Riley in his life--the ~dozen reports and costly double-registered tapes he had submitted on ND8V notwithstanding!

But, no one should be/is fooled. As previously admitted and long suspected in any event, Riley has obviously been sitting near his energized antennas for much too long! To knowledgeable amateurs, Riley's recent self-serving and semi-articulate musings in general and about ND8V and the American and the 'Polish Calling Frequency' in particular, in the circumstances do not even pass 'the giggle test'..

This latest wet noodle lashing and the requirement to reply "within 20 days" notwithstanding, as of the time of writing of this piece, or some six months--but in reality two years--later, Riley is yet to do anything

substantive to ND8V who continues to terrorize 14.275 MHz and vicinity with manifest impunity..

How come 'Kalamazoo Cuckoo' ND8V is still licensed and leads such a "Life of Riley", many thinking amateurs ask???

There are some cynics who answer generally that the ties that bind--and blind--to this extent are to be found only within 'secret societies'--such as the Masons, the Ku Klux Klan and groups which meet for trysts in 'bath houses'.. But, being cynics, they probably over-generalize, if not over-state.

Others, who are less jaded, muse simply that Riley is ineffective because he is fundamentally incompetent. Some suggest that Riley's secretary is weak in basic fact investigation and reasoning ability and has too ready an access to his rubber-stamp signature.Those who are legally trained, laconically submit that Riley is simply 'wet' on the law. Still others suggest that Riley is legally, administratively and otherwise unethical. A few point out the obvious--that Riley is also from the 4th Call District--and as such is simply covering the 'butts' of his fellow southern rednecks [and/or Klan wannabes]. Some have even suggested that Riley is intellectually and otherwise dishonest. While K1MAN bluntly states--on-air and in writing--that Riley is a "cheap and corrupt politician".

Some of these characterizations might be true, in whole or at least in part. But, after only two years of close monitoring and observation, the "relationship" between Riley and ND8V appears to be both much simpler and at the same time much more complex than that....

In a nutshell, 'Kalamazoo Cuckoo' ND8V arguably leads "The Life of Riley" because Riley continues to treat this 'useful ~400 lb. idiot' and his uncouth toadies on 14.275 MHz and vicinity as the radio equivalent of thugs and 'brown-shirts' in his battle to get K1MAN and his Bulletins off the air. Riley was/is playing the dangerous game of 'the enemy of my enemy is my friend' and provides this crude racist bully 'deep cover', convenient 'escape clauses', lenient sentences and 'get out of jail free' cards virtually on request..

But, why has this gone on for so long? Arguably, because now 'Kalamazoo Cuckoo' ND8V also knows 'where Riley's bodies are buried'..

Whatever the short and/or long-term tactical merits of Riley's ad hoc, unprincipled and ultimately Machiavellian approach, because of the collateral damage it causes to non-combatants and innocent others, it constitutes highly irresponsible and unethical administrative behaviour and brings great discredit not only to amateur radio and the FCC, but also to the United States of America as a whole.

It is past time, therefore, not only for Mikee 'Kalamazoo Cuckoo' ND8V but also for Riley 'Rot' Hollingsworth K4ZDH to go....

AR Newsline's OWN Statement that it costs about $1k/month to BRING US THE NEWS is all the proof I need.

Their expenses, when counting OTHER ACTIVITIES such as the scholarship, may very well average $1k/month, but it's clearly wrong to say that ALL of them are attributable to news gathering (when they are not).

I don't have to "hang" them - they hung themselves.

Tis very true, but without any practical experience, how would he know???

And WHY do you bother responding to him, Jim?

This, like most of the rest of the lengthy Lennie-vs-The World post, is
that same as the rest.

Just wondering, since you've made it a point of tweaking ME on several
occassions over the very same thing.

Dieter, just own up to it, will you?

You have NO PROOF other than your grossly biased and overtly angry
assertions of wrongdoing.

You've been back up on your "Bill Pasternak is a Fraud" rant for almost
three months now, Dieter, and STILL not a single line of HARD, VERIFYABLE proof
of ANY kind.

Unless YOU can PRODUCE some sort of legally defensable PROOF of fraud,
Dieter, YOU are the fraud.

Now please kindly take your whiny, snivvling rants to the "D.A.". the
"IRS", or whomever you think might not laugh the loudest at you. I USED to
laugh at you, now all I can do is drop my head in a "poor, pitiful Dieter" nod.

Yeah.... My "Troll-o-meter" pegged out too.

Some folks are so amused with themselves while drunk that they imagine that they are suddenly literary geniuses. It's pretty easy to recognize this literary "style", which reached its pinnacle of development in the southern US during the years of reconstruction, following the civil war. Books of "southern literature" from that period are difficult to find these days - and even more diffiult to read as they mainly consist of maudlin drunken ramblings that read much like this guy's post.

I don't think Luvox or Prozac would help nearly as much as a big pot of strong coffee and some solid food, for a change. The guy needs to lay off the suds (or whatever) for a while.

Hey, take a little break there, Mr Ham Radio. Give yourself a chance to sober up, a little bit.

Common sense, for one thing. Or intelligent observation.

Suppose two people who can only hunt-and-peck type at 10 wpm sit down at a 100 wpm RTTY setup. The system then becomes a 10 wpm mode. Morse Code can easily go three times that fast and more.

Therefore, Morse Code is not slower than all other modes.

Jim, you will find that in real life, non-hams that may also be
non-technical are setting the rules for amateur radio.

Be that as it may, amateur radio is a public resource and the public,
no matter who they are, may comment on amateur radio.

Actually, when put like that, I would say that MARS is radio related
and Amateur Radio is radio related. There is a connection, however,
one is not the other.

> Loose interpretation is that rrap is a Radio group. (which I agree with)

Cool.

Same ends, Jim.

Different means.

However I've not been shouting, Brain's "YellYell" silliness to the
contrary.

Name calling? Yeah, oh well. =)

And "insulting"...?!?! It's not an insult if it's true.

So far neither Lennie or Brain have disproven anything I've said.

On the otherhand, both of them have long strings of unproven, "mispoken"
or outright deceptive posts that have been laid open by not only me, but you,
Dave and others.

>>This, like most of the rest of the lengthy Lennie-vs-The World post, is

That is in rare supply.

> Suppose two people who can only hunt-and-peck type at 10 wpm sit down at a 100
> wpm RTTY setup. The system then becomes a 10 wpm mode. Morse Code can easily go
> three times that fast and more.

Indeed. And indeed rtty can go three times as fast as that. The
limiting factor is, as you pointed out, operator skill.

So I give back to you the example of a CW Operator who only knows
Morse at 10WPM.

I am now sitting down, calmly waiting for your observation.

> Therefore, Morse Code is not slower than all other modes.

FAX is pretty slow until you try it by sending an image as a digitized
file via CW. Encoding all of those x,y coordinates and a grayshade
from 0-255...

> > And WHY do you bother responding to him, Jim?
>
> To correct some of his mistakes - without shouting, name-calling, or insulting.

I have now responded to you without Steve's shouting, or name-calling,
and hopefully without you taking offense.

> Plus typing practice.

Can you type faster than you can send CW?

>face
>> ANYone who challenges your sense of impropiety.
>
>Do you say the same things about Smartguard and Quite fine?

I have. Where were you?

>> You're a coward in person or behind the keyboard.
>
>You are a bully in any mode.

If you say so...But then you say a LOT of things that are blatantly false,
patently deceptive, and outright lies.

You've done it over and over for several years now.

How do you expect ANYone to take you serious THIS time, Brain?

>> >> >Whether or not I'm at Dayton will be a mystery to you.
>> >>
>> >> No it won't.
>> >
>> >Yes, it will.
>>
>> Nope. But you keep that thought in mind if it keeps you warm
>Brain...Just

>> keep saying to yourself "...he doesn't know I am here...he doesn't know I
>am
>> here...he doesn't know I am here..."
>
>Where was I this weekend?

We weren't talking about this weekend, now were we, Brain?

>> >"Sorry Hans, MARS >>>IS<<< Amateur Radio!" in any context is simply
>> >wrong.
>>
>> No, it's not.
>
>Yup, it is.

=)

Keep repeating it to yourself, Brain...over and over and over and
over........

>> >Your bad spelling leaves a lot of room for error.
>>
>> No it doesn't. It leaves room for YOU to make excuses, but little room
>for
>> "error".
>
>It leaves room for your errors.

So far my only "errors" have been of the keyboard type.

Your's far exceed the virtual realm of this forum, Brain.

>> Anyone with the same Internet access that you or I enjoy can
>immediately
>> verify what I have stated above. And to narrow it down a bit for anyone
>who
>> cares, they can find my DXCC "enrollment" in the August 2000 listings.
>
>Wow!

Yep. One more thing that someone else has that you don't.

>> And you still haven't explained how introducing any of my Yahoo!
>> discussion groups is germane to ANY discussion or argument here, Brain.
>What's
>> up with that?
>
>Your inability to get along with others. See below, *twice.* So you
>had to form your own groups where only you can kick you off. Hi, hi!

Uh huh.

I belong to far more groups than the one's I have created.

And I still don't see you as a "subscriber" on any of them.

>> >> John K's group...THAT really hurt! Owie...Ooooie....
>
>Ayup! I'ts all a part of your inferiority complex.

"Inferiority complex"...?!?!

Well, there ya go with yet another (incorrect) medical diagnosis and we
STILL have yet to see any reference to medical licensure from you.

>> >> Now...what does my "ownership" of several discussion groups have to
>do
>> >> with YOUR patterns of lying and deceit...?!?! Still trying to figure
>out
>> how
>> >> your "PuppetBoy" brain figured that they were somehow germane to the

>> >> about your online conduct.
>> >>
>> >> Steve, K4YZ
>> >
>> >It is your on-line conduct that is questionable. I was not kicked off
>> >of any Yahoo group - you were. Doesn't play well with others.
>
>See, I said it twice and you didn't read it once.

Sure I read it.

And your introduction of my non-Amateur Yahoo! groups is still not
germane.

John "banned" me from his list not from anything said or done there, but
from his inability to institutionalize his opinions upon me here. It was the
one and only action he could take. And considering some of the other "events"
that he's gotten himself into in the intervening years one can understand why I
have no loss of sleep for having been "banned" from his list.

A list that, I believe, no long exists.

Mine are in fine shape.

>Are you in -autoreply- mode?

No.

Are you in the auto-ignore mode?

>> No luck needed, Brain.
>
>Tons of it.

You still haven't figured out WHO it is that needs the help, Brain.

Sucks to be you.

>> John "kicked me off" of his Yahoo (then OneList) group for what went
>on in
>> THIS forum, not anything that was said or transpired there. That was his
>one
>> and only way of being "one up" on someone.
>
>Everybody out to "get" Steve. So sad.

Nope. Just John seeking to get some personal satisfaction from NOT being
able to force his opinions on others.

>> Do you think I should ask the State of Ohio to revoke your driver's
>> license just becasue you like to lie and make up storiews on RRAP...?!?!
>
>I think you should.

I wish I could. It would be the least I could do to limit society's
inadvertant exposure to you.

>> You will be welcomed on any of my Yahoo! forums under the very same
>rules
>> that apply to any of the other subscribers to each...There's no flaming,
>> there's certainly no name calling, and the conversations, with extremely
>rare
>> exception, are directly relevent to the character of the group.
>
>Then you would find yourself kicked off of your own group. Hi, hi!

You're welcome to read back through the archives of them all, Brain, and
then being an example of such to THIS forum.

I'll give you a week, since ER-Nurses has something like 6,000 posts on
it.

>Except you make the rules and kick people off.

So far, it's not been necessary...The only people "kick(ed) off" ANY of
those groups has been the occassional SPAM that made it through. I've since
placed firewalls to protect that.

Again, you are welcomed to peruse the archives.

The lack of credible response in the form of a citeable post will be yet
proof enough that what you insists happens does, indeed, NOT happen.

>"I am in Control!" Al Haig after the Reagan assassination attempt.

If you need to be, Brain, we will let YOU be "in control".

I am sure you have envisioned yourself "in control" of this forum on more
than one occassion...Like right now, for example.

>> I know those three rules will be hard for you to tolerate, but consider it
>> nurturing.
>>
>> Steve, K4YZ

>
>You? Nurturing?
>
>Hardly.

About like your "I am teaching you a lesson" post of a week ago, Brain.
Except in this case you can't escape the archives.

Steve, K4YZ

>Len served. He served before you did.

That's not the point now, is it Brain?

The point is that Lennie stated (and you snipped out of your post here, as
usual) that there was nothing in his home or life that ethier Jim or I touched.

Lennie's assertion was wrong.

Your creative editing in order to try and make it appear as though
something else was being said was very Goebbelsesque.

It also further served to substantiate my assertions of your
deceitfulness.

Thanks.

>Can we entertain the idea that his service has allowed you and Jim to
>enjoy your lives as you know them?

Sure he served.

I have even said "thank-you" to him.

I acknoweldged that years ago, and for a couple of Memorial Days and
Veteran's Days running even made SURE I thanked "Len" IN PARTICULAR in addition
to all the other vets on RRAP.

Lennie has NEVER ONCE responded civilly to ANY of those salutaions.
Usually blows it off with more of his "Dill Sergeant" rhetoric.

But don't take my word for it, Brain...Google it up and see it for
yourself.

it did at one time, now it is like much of the rest of usenet and is used
only for personal attacks and the occasional spam message.

Back in '99, when I got active again, I happened across and was surprised to hear these transmissions as it sounded like broadcasting to me. I read a few of the FCC things thereafter, but it dropped off the radar screen.

So...did he and the FCC come to terms on his station operation? What was the official resolution? or is he still a problem in the FCC's eyes?

Just after the status/facts - not interested in opinions.

443. PA BPL Trials Expanding - Already Very Successful

Newsgroup: rec.radio.amateur.policy
Date: 2004-10-11 21:44:45 UTC
From: Lloyd <lloyd@bpl.rules>
Message-ID: <8701bpl7833.2458F8789@tarrnews.net>
Source record: 98336
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

"A year and a half has passed since PPL Corp. launched secret trials
of the futuristic technology that provides high-speed Internet access,
or broadband, through electrical wires and power outlets. Since then,
the Allentown company has begun marketing ''broadband over power
lines,'' or BPL, throughout much of the Lehigh Valley." --
http://www.mcall.com/business/local/all-bploct10,0,5900622.story

The article goes on to say that 72% of PPL customers are very
satisfied with the service, and that the company is going to expand
the BPL service into even more communities.

And what was that you head-in-the-sand types were saying about the
supposed death of BPL?

444. Re: K1MAN DAILY TRANSMITTING (BULLETIN) SCHEDULE

If all you want is the 'status and the facts' and want no opinions then YOU
TAKE YOUR OWN TIME TO RESEARCH THINGS.

Go to Google and type in "K1MAN". That should keep you busy for a while.

Deiter says "one spammer at a time." I like that plan.

I say that no one else on here is making threats to harm others, so
I'll deal with that one first.

Any objections?

> the BPL service into even more communities.

Grossly misleding journalistic BS. OK so maybe 72% of their customers
who have signed up for PPL BPL are satisfied with the service. Which
leaves 28% who apparently are not satisfied. Pretty dismal rollout eh?

And it ain't 72% of their power customers, it's only 72% of a tiny
collection of areas they've managed to wire for BPL so far. Based on
published map data PPL hasn't even scratched the surface of the huge
area in which it sells amps and volts. Looks to me like they have BPL
running on less than 1% of it's power wiring infrastructure and
they're already going out of their gourds trying to handle it.

> And what was that you head-in-the-sand types were saying about the
> supposed death of BPL?

Don't get yer knickers in such a twist, BPL isn't decisively alive or
dead yet by any means and no conclusions about it's ultimate fate can
be drawn at this point. This battle is gonna go on for some unknown
number of months/years to come just like our brawl in Iraq will.
That's just the way we are.

I wondered why Bill O'Reilly of Fox News had decided to wait until
after the election to make K1MAN's announcements. Maybe he's watching
which way the wind blows and is only going to jump on board if Kerry
gets elected.

After he gave Dan Rather a pass, I realized how wishy-washy O'Reilly
really is.

No it doesn't mean that. It isn't a binary situation (very satisfied
vs dissatisfied), but rather a gradation. You should have read the
article, which says that only 5% of the customers described themselves
as "dissatisfied" or "somewhat dissatisfied." What the 5% statistic
really means is that 95% of the customers were either satisfied or
very satisfied with the service.

> And it ain't 72% of their power customers, it's only 72% of a <FLUSH!>

[Rest of response flushed, because someone who didn't read the article
can't possibly have an informed opinion about the article.]

You mean something like this?????

May 24, 2004

Mr. Daniel L. Jeswald
89 Wildman Road
Anniston, AL 36201

RE: Amateur license W4NTI
Case #EB-2004-2561

Dear Mr. Jeswald:

Enclosed is a complaint we received about the operation of your station on December 26, 2003, on 14.255 MHz. The complaint alleges profanity and obscenity, as well as racial slurs.

Section 308(b) of the Communications Act of 1934, as amended, gives the Commission the authority to obtain information from applicants and licensees about the operation of their station. Accordingly, you are requested to review the complaint and respond to this office within 20 days.

In an inquiry of this type we are required to notify you that a willfully false or misleading reply constitutes a separate violation made punishable under United States Code Title 18, Section 1001.

Enclosure

It was never a "battle cry". Instead it was an observation of human nature.
The more work that a person has put in to obtain something, the less likely
that they will act in a manner to jeopardize it. It was not touted as a
guarantee that someone would not misbehave but that it would keep the number
who did smaller than it would otherwise be. There is not, never has been
and never will be a panacea that will prevent all misbehavior. This too is
human behavior. Some will flout standards and rules just to show that they
can or because they have no sense or because they don't know any better or
any other number of reasons.

The best that we can do is to make the amount of effort to obtain a license
reasonably high so that fewer people are willing to risk losing it. As a
partner to this, the enforcement and penalties need to be reasonably high so
that fewer people will risk that in addition to losing their license.

Of course I read the article Lloyd, I simply quoted your own stats.

And by the way Lloyd I've been to that area myself with my own
equipment and tuned the BPL signals in Emmaus on three occasions. I
worked there hands-on with Ed Hare when he was running the ARRL BPL
surveys, I was there when W3HJ ran his spectrum analyses of BPL, etc.
I also have a strong technical professional and business background
and know a problematic technology when I see one Lloyd. Been there,
done 'em. It ain't binary Lloyd, BPL is a technology which could go
either way down the road so I'll stick while you flush yer little
heart out around here. In the meanwhile I suggest that you put a bit
of work into getting out from behind the power curve on the subject.

Have a nice day Lloyd. 'Bye.

> All are choir members who continue to sing the ARRL official anthem.
> Their collective objectivity is certainly questionable.

So the other people from other countries also saying BPL is a problem are
also singing ARRL anthem?? How interesting.. I didn't know Japan, Austria,
Australia, New Zealand, Germany, etc, etc were all part of the ARRL???
After all, there are radio users from all those places (and more) all
singing the same song - some long before the ARRL even thought about BPL...

Their "collective objectivity" is fine - they all find the same problems
from BPL...

>
>> I also have a strong technical professional and business background

>
> But 95% of the BPL customers were "somewhat satisfied" to "very
> satisfied," and the test is being expanded to include more
> communities. Maybe you need to redefine "problematic technology" just
> a tad.
>

It is problematic technology to HF RADIO USERS, not necessarily the BPL
customers. But do we really want a small group of happy BPL customers if a
larger group of shortwave listeners, amateur operators, and other HF and VHF
users are adversly affected??? I'm sure the survey of 'happy customers'
didn't include anyone adversly affected by the interference caused by BPL...

>> done 'em. It ain't binary Lloyd, BPL is a technology which could go
>> either way down the road so I'll stick while you flush yer little
>
> The professional engineers at the IEEE support BPL, the FCC chairman
> supports BPL, and even President Bush has put his support behind BPL

And what the hell do you expect 'business orientated people' to say?? BPL
proponents have splashed around the almighty dollar sign and mentioned about

how happy the voters will be that broadband is available to more people.. Of course they are going to support it!!!

What about all those other bodies that don't support it? The ones that look beyond what it delivers to the home. Of course if you don't look for any interference then you won't find any, will you.. You bloody yanks are so stupid - "oh the President supports it so it must be OK".. utter waffle that shows just how childish and easily lead you are... Would you believe that the earth is flat if the President said so???

> (see http://www.plca.net/WhiteHouseWhitePaper.pdf if you are expert
> enough to read portable document format). I'm afraid that the power
> players are backing BPL and that the ARRL doesn't have a snowball's
> chance in Hell of changing that. Wi-Fi technology from the pedestal
> to the house also means that the interference level claimed by Ed Hare
> simply won't be found in the final BPL product.

Crap - the problem comes from the radiated signal from the nice long wire antenna called power line - you know, that bloody long cable running down the street on top of the power poles... That is what radiates the most signal and spurious emissions, regardless of how it is finally delivered to the household. Even BPL delivered by underground shielded cables have shown unacceptably high interference levels around the properties serviced...

Are you radio orientated at all? What happens when you pump an RF signal into one end of a long unshielded piece of wire? You know, the kind of wire you'd use to make, well, a long wire antenna.... Of course, different lengths of power line will radiate different levels of signal, just as when you use a long wire antenna not tuned for the band you are on, but in the end the overhead power line is not a sheilded cable or coaxial cable - it's just a straight length of wire that radiates RF nicely....

Wake up and smell the bullshit you are waffling. EVERY country that has or has trialed BPL has reported at least some interference problems by various radio users, not just amateurs. Japan has banned it because the Government found the interference too much, Austria has stopped trials for the same reason. Now ask yourself which Administration really cares about their entire population - the Japs, Austria, etc that actually refuse a technology because it will adversly affect a large number of citizens - or the USA, etc, who are willing and happy to ignore the difficulties it will cause a large number of radio users simply because "it's new and exciting technology!!!". Which Government seems to be more interested in its citizens rather than just big business???

Christ sakes, asbestos was 'new and exciting' when it first came out - now it's killing people!

If I were you Amaericans I'd be seriously asking the Government exactly who they represent - the people or just the big businesses..... Seems the individuals rights have been sold out for the sake of 'technology'...

>
> It may be that the only way for amateurs to get an objective answer is

> to convince the K1MAN RFI Laboratory to run tests of its own.

Not just amateurs - all you shortwave listeners out there, trying to receive extremely weak signals from distant countries, will probably be worse affected and have absolutely NO interference protection or comeback....
Have fun!!!

Martin (NOT a God damn Yankee)

You seem to have poor reading skills. Specific individuals were under
discussion, as was a specific BPL test installation in the United
States. If you want to change the subject in an attempt to include
your part of the world (Australia), I'm afraid you're only going to be
talking to yourself.

Freebanders, if you will, are bottom feeders.

Freebanders, if you will, are fat, lazy, and stupid.

Freebanders, if you will, ARE second class citizens, alone with others in
the criminal element.

Freebanders, if you will, will NEVER receive RESPECT from any licensed
Amateur Radio Operator.

Freebanders, if you will, are LOWER than trailer trash.

Freebanders, if you will, are not respected by good CB Operators.

Freebanders, if you will, lack motivation, skill, and education to become a
good operator.

Freebanders, if you will, are looking for the EASY way, not the CORRECT way.

You are different in one very basic way. We have a federally issued license to operate on the bands that we transmit on, you do not. As for being "good operators", I have heard good operating technique on the so called "freeband", just as I have heard poor operating techniques on the ham bands.

> We use Yasus, Kenwoods and Icom radios just like you do, so we know

What's a "Yasu", perhaps you mean a "Yaesu"?

> technical issues as well or better. It isn't like we've gone to the

Look at it another way --
just because you purchased an expensive car, it does not give you the right to drive like a maniac at 150 mph down the highway (although here in New Jersey, many folks seem to think it does). Just because you paid a lot of bucks for some radio gear, it does not give you the right to transmit on frequencies that you are not authorized to use.

> However, the attitude of some hams toward us is rude and
> condescending. We are treated like 2nd class citizens, partly because
> we don't want to be part of the elitist "clique" that amateur radio

I never thought of amateur radio operators as being an elitist group. I have known hams from every age group, all socioeconomic levels, and very diverse professions. The only thing that is common to them is that they have a love of radio.

I also do not see anything in the constitution about the rights of ham radio operators. Perhaps you are looking at a very different version of the constitution than I am familiar with.

> For those that do not wish to be under Uncle Sam's thumb, freebanding
> is a viable alternative to getting a ham radio license. What I am

If you don't wish to be under Uncle Sam's thumb, move out of the US.

> saying is that maybe the next time you meet a freebander it might be
> wise to talk with him before you condemn him.

I am ranking your post as being 20dB over S9 on the Troll-O-Meter

Of course it must meet the requirements of Part 97 as its primary purpose but the problem is who is to define the standards as to what constitutes technical competency, operational competency, self trained operators, and persons knowledgeable in the radio arts. There are already movements in progress claiming that we do not need the standards being used today to meet Part 97 not only in code proficiency but also in technical, operational, and regulatory areas.

One thing that "Elminster22" has proved is the gullible stupidity
of hams. He posted an obvious troll. Moreover, a troll which
has been posted to r.r.a.p. many times. Yet, dimbulb hams
bite on the sucker bait EVERY time, and that is why the same
troll is posted here over and over, to see the moronic knee-jerk
reactions from hams who should know better. Yeah, freebanding
is not legal, we all know that. However, Elminster22 does have a
few valid points. Totally ignore these trolls or give them a
courteous reasoned response. Nevermind, I am asking way
too much from today's dumbed down pool of ham operators,
who themselves only recently graduated from freeband and
14313.

Good to see you back, Kim!

In article <la7bd.4991$Al3.3113@newssvr30.news.prodigy.com>, "Kim"
<mail@nomail.com> writes:

>"Morse code is slower than ALL modes." Hmmmm, that's a rather interesting
>observation.

It's also not true.

>I think it would have to be determined on when and where. If
>there's a CW net in progress and there are not very experienced people, then
>it probably would be pretty darned slow--and repetitive.

I agree 100%. But isn't that also true of *any* mode?

How many times in your life have you tried to pass a simple message to someone
over the telephone, and it took 5-10 minutes just to get the person on the
other end (an adult!) to write down your name, phone number, and "please call
me back"? On CW, a couple of ops with decent skills would be done doing that in
15-20 seconds, tops.
>
>However, under dire circumstances when, presumably, a CW net would be
>underway with very experienced communicators and would be the fastest, most
>efficient method of communication (hands down, no pun intended).

I *sort of* disagree. It depends entirely on the situation.

>For once,
>this is a thread wherein the real point of CW can be highlighted. CW may or
>may not ALWAYS be the "one mode that gets through when no other will." But,
>it's hard to argue that CW--if clear and done well--is the fastest and most
>efficient mode.

I'm not sure whether you're arguing that CW is or is not the fastest and most
efficient mode, Kim. Perhaps I'm just not getting that last sentence the way
you intended it.

But in any case, I say it depends entirely on the situation. For example:

Suppose you have a number of stations set up with 100 wpm "keyboard modes". But
the operators can only type 10-20 wpm. Then the real speed of that mode is only
10-20 wpm. And if stations don't have printers, "hard copy" via keyboard modes
is no faster than any other mode where writing is involved.

Suppose you have a voice net, and you want to pass traffic that has to be
written down. Even though people allegedly talk 100-200 wpm, in such a
situation the real speed of operation is how fast the receiving ops can write

legibly. Which is typically about 15-30 wpm for untrained folks.

(insert your favorite scenario here)

You can come up with all kinds of scenarios where one mode or another has an advantage for various reasons. For example:

- You can safely drive and operate voice or CW, but not RTTY-type modes

- RTTY-type modes, with the right equipment, can be set up to deliver multiple hard copies, to forward via email or other methods, and to relay without much "handling".

- Voice modes are almost entirely insecure (anybody with a receiver can listen in and gather information, and people nearby the transmitting operator know what is being said).

- CW requires the simplest equipment and *usually* the least power for a given communications capability.

Etc., etc., etc.

Yes there are differencs, the main one is you are operating illegally
while the hams are licensed to use the frequencies on which they oprerate.

> We are good
> operators and have knowledge of propagation and skip conditions.
> We use Yasus, Kenwoods and Icom radios just like you do, so we know

No matter what kind of equipment you use, how much you spend, or how you
use it, you are still illegal.

> However, the attitude of some hams toward us is rude and
> condescending. We are treated like 2nd class citizens, partly because
> we don't want to be part of the elitist "clique" that amateur radio
> has become. This should not be.

You mean because you are to lazy to get a license.

> We have the same rights under the constitution as legal hams do.

So show me in the constitution where you have the "right" to operate
illegally. You have the same right to get a license and operate legally
as anyone else, but you obviously are either to lazy or to stupid to
pass the test.

> For those that do not wish to be under Uncle Sam's thumb, freebanding
> is a viable alternative to getting a ham radio license. What I am
> saying is that maybe the next time you meet a freebander it might be
> wise to talk with him before you condemn him.

Maybe if you get licensed and operate legally you won't be condemed.

And by the way, the frequencies between 11 and 10 meters are not the
"freeband". That is a label you illegal operators have put on those
frequencies to make yourself feel it is OK to operate there. Those
frequencies are allocated to other services and just because you may not
hear someone else using those frequencies does not mean it is your
constitutional right to operate there.

MAN's 'purpose' you say??? Tell us LLlllloooooyyyyyddddd what is his
purpose?

Oh let me help you...it is to sew hate and discontent among ham radio
operators. It is to thumb his nose at the FCC, it is to irrationally
insult the ARRL and then run their bulletins on his 'program' in order to
trash up the bands.

Two outstanding problems he has to fix:

Firing up his transmissions on frequencies other hams are
using at the time, and something about pecunary interest
when he tells people on ham radio frequencies to visit his
web site where he sells stuff.

WTG, Bert!

I've never been a QRP fan, but I "accidentally" worked QRP once not realizing I'd done it till after the fact! I had the power on my FT-757GXII rolled back to accomodate my TenTec 6 meter transverter. I was getting some acceptable but lower than expected RST's from Europe. I even went outside to see if a leg of the dipole had come down!

Later on I remembered the transverter. I rechecked the power and wa-la! Had been working Europe with 5 watts out on 20CW. "Routine" for the real QRP guys but new for me!

I've rolled the power down a few times on 30CW and had some good results.

The same way it's done today...The FCC would set the objective and the
VEC's would ahve to create the "questions" for thier approval. The VE's would
then be given a set of "MET/NOT MET" criteria to check off an applicant on.
(logbook entries, certificates of completion, etc...)

>There are already movements in

Amateur Radio is a fraternity or skill, and licensed radio operators.
We openly welcome new "Hams" into the clique. Get a legal license and
see for yourself.

> This should not be. We have the same rights under the
> constitution as legal hams do.
Amateur Radio is not covered in the Constitution, it's governed by the FCC.

<snip>

Yes you are. You're not licensed, and your ethics are more than a
little questionable.

You may not agree with everything that amateur radio has become.
You may not agree with the laws of this country which require that most
transmitter operators be appropriately licensed by the FCC.

That's fine. I happen to disagree most vehemently with our current
excuse for a president on most of what he's done. However, this does not
give me or anyone else the right to simply ignore the laws of the land.

If you are operating a CB radio outside of its designated channel
assignments, you're breaking the law. Period.

If you're operating an amateur 10-meter radio without a license,
you're breaking the law. Period.

> operators and have knowledge of propagation and skip conditions.
> We use Yasus, Kenwoods and Icom radios just like you do, so we know
> technical issues as well or better. It isn't like we've gone to the

Really? "Using" a radio does not automatically mean that you know
anything about the theory and practice behind what makes its innards
work. I'm sorry to say that many hams today have chosen not to maintain
the level of knowledge of electronics and RF theory that was required
for them to pass their initial exam.

HOWEVER -- That is their choice. Despite my own beliefs, I choose
to respect those who have done so for that choice. At least they made
the effort to study up and get their license.

BTW, you misspelled 'Yaesu.'

> local Wal-Mart and bought a Cobra 40-channel close-out for $35, and
> attached a mag-mounted antenna. We've put thousands of dollars into
> our equipment, so we respect it and know how to use it.

Really? Care to post some proof of that? Specifics on what you
bought, where you bought it, and how much you really paid for it?
Perhaps copies of receipts?

> However, the attitude of some hams toward us is rude and
> condescending. We are treated like 2nd class citizens, partly because
> we don't want to be part of the elitist "clique" that amateur radio
> has become. This should not be. We have the same rights under the
> constitution as legal hams do.

No you do not, because you are operating radio transmitters
without an appropriate license.

Also, please quote the portion of the Constitution that extends
any sort of "rights" to hams or "freebanders."

> For those that do not wish to be under Uncle Sam's thumb, freebanding
> is a viable alternative to getting a ham radio license. What I am
> saying is that maybe the next time you meet a freebander it might be
> wise to talk with him before you condemn him.

No, thank you. I'm not going to condemn him or her, if I happen to
meet one, but neither will I choose to share knowledge of technical
issues if asked.

I will not assist, in any way, anyone to operate a radio
transmitter illegally. To do so would be to risk my own licensing, and
that I will not do.

If you choose to continue to operate without licensing, well,
that's your choice. Do not expect such operation to be without
consequences, one such is very likely to be derision from those of us
who studied -- often for months -- to earn our licenses.

Also, don't be surprised if the FCC shows up at your door one of
these days.

Kim, you are welcome to hold any belief system you wish, but the
FACT that on-off-keyed "CW" morse IS the slowest communications
mode in use today or in use a half century ago. I've seen it up close
and personal throughout this whole past half century. It is evidenciary
in the REST of the radio communications world.

The slowest teleprinter rates of a half century ago was 60 WPM and,
to some degree still with old, worn-out surplus teleprinters of that
era. With Mark-Space shift of 170 Hz, those old, cranky 60 WPM
Teletypes need less than 400 Hz of bandwidth to transmit in FSK.
Those ancient machines (already around well before Jimmie was
born) can run continuously at 60 WPM throughput as long as they
are fed paper rolls and paper tape. I once watched over 200 such
teleprinters busy, busy working continuously 24/7 in the same
place on several "networks."

The old electromechanical Teletypes of the 1970s can sustain 100
WPM throughput as long as the old 1940s era machines did. A
modern PC can emulate either of them and go faster, having much
more mass memory to store archives of network messages.

It is the EXCEPTIONAL rarity now to find any two morsemen at each end of a ham radio circuit who can do SUSTAINED "network" communications by on-off-keyed "CW" morse at 40 WPM for hours. HOURS. Networks need hours if the number of messages are great.

I've known a couple of speed freak morsemen who had regular QSOs along the California coast, doing bursting rates of about 60 WPM for a minute or so at a time. I took their word for it, not hearing their ham transmissions. A minute or so at a high rate of morse is not good enough for real networking, copying down and recording for later re-transmission of message content.

>However, under dire circumstances when, presumably, a CW net would be
>underway with very experienced communicators and would be the fastest, most
>efficient method of communication (hands down, no pun intended). For once,
>this is a thread wherein the real point of CW can be highlighted. CW may or
>may not ALWAYS be the "one mode that gets through when no other will." But,
>it's hard to argue that CW--if clear and done well--is the fastest and most
>efficient mode.

Nonsense alive and well only in the imaginative fantasies of mighty macho morsemen. Real networks don't operate on imagination. "Error-free" messages don't get relayed through self-glorified boasting.

The rest of the radio communications AND wire communications world learned that between a full century and a half century ago. That's why NONE of them use morse code for message communications now.

All that said, I think that radiotelegraphy IS faster than the old British and French semaphore communications systems. Morse radio-telegraphy IS faster than the pony express and IS faster than paper surface mail. Radiotelegraphy does reach out farther than the human voice can transmit unaided by anything but the human body. Other than that, morse radiotelegraphy still remains the slowest mode of communications available to radio amateurs.

Those who want to fantasize that morse is "faster" or "better" will have to set up a controlled test NOT in morse favor to demonstrate that alleged fact. Let all those might macho morsemen sustain 20 to 40 WPM continuously for an 8-hour period...and do the communications with LESS error than any teleprinter circuit.

>Their own statement is all the proof anyone needs. It is false on its face.

The false face here, Dieter, is the one you keep trying to put on it.

ARN has been doing this for YEARS now without so much as a HINT of impropriety suggested by ANYone, let alone federal regulators or law enforcement.

YOUR allegations are so tainted that they will fail simply because anyone who takes 20 minutes to review YOUR postings against Bill Pasternak in this forum will be able to expose YOUR true agenda as the personal vendetta that it is.

ARN asks for money. They specify what they want it for.

They've produce results. For over twenty years now.

All YOU have "produced" are allegations, insinutations, threats and snivvling rants.

PROOF, Dieter, are SIGNED affidavidts of persons who have witnessed these alleged acts of fraud.

PROOF, Dieter, is an accountant's sworn statement that Bill's books are not in order.

PROOF, Dieter, are receipts from trips charged to ARN that can't be attributed to an Amateur Radio activity wherein Bill was acting on behalf of ARN. IE: Tahiti, Aruba, The Mustang Ranch, etc, etc etc.

So far, you've produced exactly SQUAT.

So...WHERE are these charges you were taking to the "D.A."...?!?!

And you DO know that if you DO file a complaint, that as soon as the story breaks there WILL be people who show up or call the D.A. (or whomever you "file charges" with...) that make that Agent or court officer aware of YOUR crusade,

right...?!?!

So....You go RIGHT AHEAD and show the "D.A." your "proof", Dieter...

Steve, K4YZ

Only disgruntled PCTA have propped up that strawman.

Are you one of them?

That simply can't be. Dan's statement was:

"As in front of the FCC? Most certainly. I never said being CW tested
makes you have any sense."

You replied:

"But that used to be one of the battle-cries for the PCTA."

Now you tell us that none of the things Dan stated are the item which
you claim was a PCTA battle cry.

> It is one of the Morse Myths that the "Morse Code Test Keeps Out The Riff-Raff."

Oh? You're introducing something new? I've never subscribed to any
such statement. After all, you got in. I note that you call this
statement a "morse myth" and not a "battle cry". Would you like to
reconsider or reframe your statement?

I am stating an observation. There have been proposals/petitions submitted
to the FCC that very clearly state proposed new requirements for written
testing that are less difficult than exists today.

Don't exaggerate, Leonard. You might have seen it up close but for you,
it wasn't personal.

Actually, many of the old Mod 26's, a relic of the '60s could do 100
wpm.
They couldn't do it in the presence of heavy static or multipath flutter
or echo though, even with the use of modern digital "helpers" such as
various HF link enhancement devices.

> It is the EXCEPTIONAL rarity now to find any two morsemen at

...and you know this because of your vast experience in the use of
morse?

One thing for sure: It is certainly a rarity to find TWO morse ops at
each end of a circuit.

> Nonsense alive and well only in the imaginative fantasies of mighty
> macho morsemen. Real networks don't operate on imagination.

They certainly don't, even if TTY machines are being used on an HF
circuit.

Jim has stated that the throughput of a rtty system may be limited by the typing speed of the operator. The example he used is that the rtty operator might only be able to type 10wpm, thus rendering the rtty a 10wpm machine.

I responded that the throughput of a CW system might be limited by the Morse Code operator only knowing the code at 10wpm.

I wanted to know how that was different from his example. So far no response.

Even if the operator can type 120 WPM, if s/he can't be interrupted in the midst of the string and asked for a repeat, as a good QSK CW operator can, then that error will exist until the end of the transmission and the error resolved.

Assuming the interruption it to tell the transmitting station that it's ALL garbled, your 60-100WPM teletype just became zero.

A bridge out in the middle of the Autobahn means everyone goes zero until the bridge is replaced regardless of what the thoroughfare will otherwise allow. Same thing.

The only thing "evidencairy" is that you've misrepresented facts
again.

Morse Code is NOT the "slowest communications mode". That title
belongs to the spoken word for formal traffic throughput.

Morse Code, as a mode, has been replaced simply due to it's cost
in human resources and training. I remains the simplist mode and
among the most reliable.

As for your "up close and personal", yet more of your own
over-grandising of your own net worth to the world of "radio". No

evidence exists of any contributions made to the world of "radio" by
any "engineer" by the name of "Leonard H. Anderson"....None.

And as long as 100% propagation remains intact and 100% machine
operability remains then they would work.

I also worked with those machines.

If an error occurs, you had no means of knowing that until the
end of the transmission unless you were operating a parallel channel
and were asked to stop and restart.

> The old electromechanical Teletypes of the 1970s can sustain 100
> WPM throughput as long as the old 1940s era machines did. A

And at the end of a 100WPM teletype transmission, if you had the
same interruption of continuity of the string, you now had even MORE
data that had to be repeated.

> It is the EXCEPTIONAL rarity now to find any two morsemen at
> each end of a ham radio circuit who can do SUSTAINED "network"

For a "network", yes it is.

However the number of operators who can go on for "HOURS" at a
time at 40+ WPM are NOT that big a rarity.

Two Novices going 5WPM are going 5WPM faster than you can,
Lennie, so what does it matter?

> >However, under dire circumstances when, presumably, a CW net would be
> >underway with very experienced communicators and would be the fastest, most

> "Error-free" messages don't get relayed through self-glorified boasting.

Nope. Just through practiced, skilled operators.

No imagination. The nets still operate. The resources are still
there.

> The rest of the radio communications AND wire communications world
> learned that between a full century and a half century ago. That's why
> NONE of them use morse code for message communications now.

A lie.

Morse code nets still exist to this day in the "radio
communications world".

> All that said, I think that radiotelegraphy IS faster than the old British
> and French semaphore communications systems.

All that said, it's also fster than any mode Lennie is presently
licensed to operate.

> Morse radio-
> telegraphy IS faster than the pony express and IS faster than paper
> surface mail. Radiotelegraphy does reach out farther than the human
> voice can transmit unaided by anything but the human body.
> Other than that, morse radiotelegraphy still remains the slowest
> mode of communications available to radio amateurs.

No, it isn't. Word for word, I can still get a message through
faster on a CW net than on a voice net.

> Those who want to fantasize that morse is "faster" or "better" will
> have to set up a controlled test NOT in morse favor to demonstrate
> that alleged fact.

OK...I will allow that a message that says "Got the card, thanks,
Love" might be sent just as fst on a voice net as on CW.

However start sending traffic with multiple addresses, lengthy
text and unusual text with conditions that are "rough", and the
traffic will pass faster on CW than on voice.

> Let all those might macho morsemen sustain
> 20 to 40 WPM continuously for an 8-hour period...and do the
> communications with LESS error than any teleprinter circuit.

Macho Morsemen can do it. Untrained, envious ex-technicians
without any radio licensure can't. Period.

According to authoritative legal sources, ALL of MAN's
activities are quite legal. For some odd reason, probably
envy, many American hams are in denial and think MAN
is doing something illegal, which he is not. If ARRL is
legal, MAN is legal. Simple!

This isn't an aerospace newsgroup. And the Southgate Type 7 wasn't "thrown
together". Nor is it to serve a temporary purpose. So the term doesn't fit at
all.

1948, actually. So what?

> Tubes
> are venerable, traditional, the stuff of might and brawn in hum
> raddio...according to the olde-tymers.

If your radios hum, I suggest you do some work on the power supply filters.
>
>>> >I find that most of the "modern ready-built" radio sets are very
>>> >unattractive.
>>>
>>> ...just like all the other radio amateurs? :-)
>>
>>I find some other radio amateurs unattractive too. Most I find to be
>>nice people.
>
> But, you don't LIKE the "modern ready-builts." :-)

Most of them I find unattractive, and not well designed ergonomically. That's
my independent opinion. You seem to be saying that I should simply, blindly
accept what the manufacturers produce. After all, they're 'professionals'...
>
> You want to re-invent the wheel and get all the applause for being
> able to use chassis punches... :-)

??

The Type 7 is a unique design. No similar amateur radio transceiver exists, either in current production nor in the past.

Here's a quick design problem for you: Design a heterodyne scheme to cover the 80, 40, and 20 meter ham bands (CW/data portions) using a 1400 kHz receiver IF and a single-range VFO whose maximum frequency is less than 7 MHz. Use a minimum of parts and allow for transceive operation, receiver offset tuning, and bandswitching. Alignment must not require much in the way of test equipment.
>
>>> Why are the designer-manufacturers continuing (after years of doing
>>> so) to design such "unattractive" exteriors?
>>

>>very unattractive. If that's unacceptable to you, tough.
>
> Rationalization for being ultra-cheap...or terribly strapped for available
> cash even though working as an electronics engineer (implied) for
> money. Tsk.

Not at all. The Yankee word for it is "frugal".

Why should I spend more money on a transceiver that does not meet my requirements when I can build one for less money that does?

Why should I accept the manufacturer's idea of what is "attractive" rather than my own?

Why should I accept *your* idea of what is "attractive" rather than my own?

You seem to be saying that amateur radio must be limited to only those who are willing to spend the money for "ready-built" equipment that meets your approval. Even though you are not a radio amateur and never have been. Very illogical.

>>> >Cluttered front panels, poor color choices, knobs and displays way too

If you wish to call it that.
>
> SHOW WORK! MAKE WEB PAGES FOR DISPLAY!

Why all the shouting?
>
> "Proof" is in the web pages! If it doesn't exist, then everyone
> "lies." :-)

Nothing worth showing, huh? That means you're all talk and no action, Len. All show and no go. Vaporware.
>
>>DOS tip, Len: AOL gives you a free home page with each screen name.

>>help you set them up. Even I managed to get two of them done in a
>>short time. (Yes, there's another...)
>
> Tsk. The limit is 2 MB per name. Good for some snapshots,
> little more. :-)

They don't have to be high resolution. One would think an old-time modem-communicator like you could do a lot with 14 MB. But so far nothing. Nada. Zip. Zero. All talk and no action. All show and no go. Vaporware.
>
>>So *show us* what *you* could do in the home workshop, using only your
>>own resources.
>
> Geez...all but baring your teeth in a snarly challenge! :-)

Not me. That would be you...

Your response is as expected, Len. You don't have any homebrew HF radio projects to show us. Not receivers, transmitters or transceivers anyway. You'd be at a loss to actually design and build one yourself, in your home workshop, on your own time, with only your own resources. You talk a lot about articles written by others and technical details, but when it comes to designing and building a complete radio.......

Nothing worth showing.

> You are still put out that all I said of your single photo was that it
> was "neat."

Not "put out" at all. You behaved exactly as expected and predicted.

> No gushing admiration for your prodigious chassis
> punching, no respect for your mnemoic capabilities of tube circuit
> recall. Sigh.

There's a lot more to building a rig like the Type 7 than "chassis punching"
and remembering circuits.

>>About the Type 7:
>>
>>Had I used "decals" on the Type 7, you'd complain that they were
>>glossy and hard to read, plus easy to rub or wash off.
>
> A simple Lucite of Plexiglass cover plate (easy to work) will
> protect such things.

"Lucite of Plexiglass"? What is that?

The word is "Plexiglas", btw.

Now if it were Len writing this post, he'd go off on a long tangent about how
"Lucite" and "Plexiglas" are brand names for a certain family of clear
plastics. Lots of stuff about their history, etc. Maybe mention the big Rohm &
Haas plant in Bristol, PA, near the Burlington-Bristol bridge, just northeast
of Philadelphia on I-95. Etc., etc., etc.
>
>>Had I used tape labels, you'd complain that they looked "primitive"
>
> But you didn't and I didn't remark on it. Yet you "know" I would

Your behavior is very predictable, Len.

>>Had I used engraved nameplates, you'd complain that they looked old
>>and like an afterthought.
>
> But you didn't and I didn't remark on it. Yet you "know" I would
> have said what you accuse me of doing...hi hi.

Everyone who reads your stuff here knows what you would have done, Len.

>>Had I silkscreened the front panel, you'd complain that it wasn't
>>engraved.
>
> But you didn't and I didn't remark on it. Yet you "know" I would
> have said what you accuse me of doing...hi hi.

It's "what you do", Len
>>
>>Had I engraved the front panel, you'd complain about the color choice.
>
> But you didn't and I didn't remark on it. Yet you "know" I would
> have said what you accuse me of doing...hi hi.
>>
>>Or similar stuff.

>
> But you didn't and I didn't remark on it. Yet you "know" I would
> have said what you accuse me of doing...hi hi.

It's very clear that you are more interested in the superficial (appearance, parts used, cost) rather than the significant (performance, reliability, usable features, unique methods) of homebrew radio equipment.

>>> >>Jim's radio did just that.
>>> >
>>> >And much more.
>>>
>>> >>Mission accomplished.
>>>
>>> >>>>> Not the stuff of "marketable design!"
>>>

>>building a rig, but being able to use it on the air. Not just from a
>>license/legal perspective, but from a practical operating skills
>>perspective.
>
> Tsk. Inferiority complex you have?

Nope. But you seem to have one. Somebody has a website that shows a homebrew ham station, and you have to attack its appearance and the technology used, even though you know little or nothing about it.

>>> >>We forget Lennie's only reason for being a "radio
>>> >>professional"...profit.
>>> >
>>> >Nothing wrong with that!
>>>
>>> "Nothing wrong?"
>>
>>No, there isn't.
>
> There is wrongness in still keeping the code test in U.S. amateur radio
> regulations.

No, there isn't.
>
>>> Tsk. That's a hypocritical statement in here!
>>
>>How? By whom?
>
> Yourself...a PCTA extra with the Double Standard.

Explain - if you can.

Meanwhile, readers may note that you talk of "homebrewing" and "technical subjects", but have nothing to show that isn't work-related except perhaps having purchased a ready-built receiver 20+ years ago. For "CASH"...

It may also be noted that while you talk about only being against the Morse Code test (not use), and being in favor of hams doing technical stuff, that talk rapidly turns negative and critical when someone actually does such things.
>
>>> >> WE do what we do for FUN!

>>> Engaging in a part-time HOBBY is a "service to the country?"
>>
>>Sure.

It would be great if it were a full time pursuit...
>
> Nonsense. Particularly from someone who NEVER served in
> the military.

You seem to think that "the military" is the only way to be of service to our country. You're wrong about that.

> Your mindset is so engrossed in amateur radio as your raison
> d'etre that you've slipped over the edge of reality into fantasy.
>
Not me, Len. Amateur radio is just one of many things I do, and have done for a long time. In fact, it was 37 years ago today (October 14, 1967) that my Novice license arrived in the mail from the FCC. 37 years of great fun, learning, making friends all over the world, designing, building and operating rigs of many types.

If anyone has a "mindset is so engrossed in amateur radio as your raison d'etre that you've slipped over the edge of reality into fantasy", it would be *you*. Len. You're not a ham, have never been one, have no apparent intentions to become one despite that "out of the box" claim of almost 5 years ago.

Yet you post here probably more than anyone else, clutter the ECFS with long repetitious commentary on a single small facet of amateur radio testing, and argue even with those who agree with you.

Very illogical.
>

CERTIFIED MAIL 7099 3400 0015 4631 9236
To: W. Riley Hollingsworth, Esq.
FCC
Gettysburg, Pa. 17325-7245

From: Glenn A. Baxter, P.E., K1MAN
Registered Professional Engineer
Date 14 October 2004
Subject: Your letter to K1MAN dated 15 September 2004
and received 28 September 2004
Thank you for your letter and your interest in K1MAN. The legal
opinions in your letter referenced above are not correct and the
various allegations are false. K1MAN is in full compliance with all
FCC rules, state laws, and federal laws. I encourage you to take
"enforcement actions" and look forward to seeing you in court(s).

Regarding your request, I hereby certify that:
1. No corrective actions are necessary at K1MAN.
2. No changes are needed with regard to station control which is in
full compliance with all FCC rules.

Good listening! GL and 73 de K1MAN
(signed)
Glenn A. Baxter, P.E., K1MAN

Not at all, Jim.

Lennie's one and only reason for being a "radio professional" was to MAKE
MONEY from the radio industry.

As long as Amateurs continue to show the resolve and initiative to either
participate in radio design and engineering and/or build thier own gear, even
if in the form of a kit, then "radio professionals" such as he (still gives me
a snicker!) will still have to hang out at the union hall looking for work.

>> "lies." :-)
>
>Nothing worth showing, huh? That means you're all talk and no action, Len.
>All
>show and no go. Vaporware.

WE have had pictures of our various stations. Lennie can't even show us a
clipping from a catolog of what he CLAIMS to have up and running.

>>>DOS tip, Len: AOL gives you a free home page with each screen name.
>>>You can have up to seven! Plus they provide easy-to-use software to
>>>help you set them up. Even I managed to get two of them done in a
>>>short time. (Yes, there's another...)
>>
>> Tsk. The limit is 2 MB per name. Good for some snapshots,
>> little more. :-)
>
>They don't have to be high resolution. One would think an old-time
>modem-communicator like you could do a lot with 14 MB. But so far nothing.
>Nada. Zip. Zero. All talk and no action. All show and no go. Vaporware.

My QRZ site was a pic of my station when I was on Cagle Mountain.

And the AOL pages handle a heck of a lot more than "2MB". Anyone who has
looked through AOL pages know there are thousands upon thousands of pages that
have multiple pictures, graphics, and even "background music".

Yet our "resident radio professional" is already making excuses as to why
he can't make a single page AOL home page.

I am sure there are hundreds of pre-teens and middle school kids falling
off thier chiars in laughter right now! ! ! !

Some of them Amateur Generals and Extras, no doubt!

>>>So *show us* what *you* could do in the home workshop, using only your
>>>own resources.
>>
>> Geez...all but baring your teeth in a snarly challenge!
>
>Not me. That would be you...

Only further prrof of my assertions of what a liar Lennie is...

He never was an engineer, probably a borderline technician, undoubtedly
skilled at nothing more than plagiarism.

>Your response is as expected, Len. You don't have any homebrew HF radio
>projects to show us. Not receivers, transmitters or transceivers anyway.
>You'd
>be at a loss to actually design and build one yourself, in your home
>workshop,
>on your own time, with only your own resources. You talk a lot about articles
>written by others and technical details, but when it comes to designing and
>building a complete radio.......
>
>Nothing worth showing.

Nothing TO show, let alone "worth showing"...Not even a store-bought
SWL/Scanner installation.

>> But you didn't and I didn't remark on it. Yet you "know" I would
>> have said what you accuse me of doing...hi hi.
>
>It's very clear that you are more interested in the superficial (appearance,
>parts used, cost) rather than the significant (performance, reliability,
>usable
>features, unique methods) of homebrew radio equipment.

That was, of course, the fifth paragraph where Lennie tried to make an
issue of "know(ing) what (he'd) do".

I guess Lennie thinks we're not observant enough to have noted very
predictible and established patterns...

>> Tsk. Inferiority complex you have?
>
>Nope. But you seem to have one. Somebody has a website that shows a homebrew
>ham station, and you have to attack its appearance and the technology used,
>even though you know little or nothing about it.

But you KNEW how he'd react, Jim.

WHY do you respond to his stuff, anyway...?!?! (Where have I heard THAT
before...?!?!)

>>>> Tsk. That's a hypocritical statement in here!
>>>
>>>How? By whom?
>>

>> Yourself...a PCTA extra with the Double Standard.
>
>Explain - if you can.
>
>Meanwhile, readers may note that you talk of "homebrewing" and "technical
>subjects", but have nothing to show that isn't work-related except perhaps
>having purchased a ready-built receiver 20+ years ago. For "CASH"...
>
>It may also be noted that while you talk about only being against the Morse
>Code test (not use), and being in favor of hams doing technical stuff, that
>talk rapidly turns negative and critical when someone actually does such
>things.

Of course, Jim!

But don't let Brain see you actually using Lennie's own words against him!
Only those of us that he calls "PCTA" have a "double standard"!

>>>> >> WE do what we do for FUN!
>>>> >
>>>> >Also service to our country.
>>>>
>>>> BWAHAHAHAHAAHHHAAAAA....!!!!
>>>>
>>>> Engaging in a part-time HOBBY is a "service to the country?"
>>>
>>>Sure.
>
>It would be great if it were a full time pursuit...

If only it could.

Of course Lennie could ask the same question of members of the USAF
Auxiliary (Civil Air Patrol), the USCG Auxiliary, the American Red Cross, the
Salvation Army, The Boy Scouts, the Girl Socuts, the American Heart
Association, etc etc etc...

Each of those organizations and programs are almost 100% volunteers
(notice I said ALMOST...) For many of those folks, it's "just a hobby".

Dare we say that any one of those organizations provides a "service to the
country"...?

Amateur Radio DEFINATELY does. It's been documented in the Federal
Register as such.

>> Nonsense. Particularly from someone who NEVER served in
>> the military.
>
>You seem to think that "the military" is the only way to be of service to our
>country. You're wrong about that.

Of course he is.

>> Your mindset is so engrossed in amateur radio as your raison
>> d'etre that you've slipped over the edge of reality into fantasy.
>>
>Not me, Len. Amateur radio is just one of many things I do, and have done for
>a
>long time. In fact, it was 37 years ago today (October 14, 1967) that my
>Novice
>license arrived in the mail from the FCC. 37 years of great fun, learning,

>somehow I'm an idiot. Then Jim comes in and pats him on the back.

Nursie's newsgroup technique is simply to personalize each and
every thread and discussion with insults heaped on everyone who
doesn't agree with him. Doesn't really matter what the subject is,
it must boil down to his anger and antagonism against everyone
else. Gets tiring very quick.

Now "he" is a fashion designer.

Does his BS never stop...???

Anyway...Yeah, I was wondering about the disparity between the narrative
in EMTECH's literature, but then the "catolog" says "board only".

I don't mind that I'd have to "box" it myself...Acutally, I think I'd
actually prefer it...And even if I got the TenTec kits, I thik I'd put them in
a different package. I'd prefer to put one of the National dials on it and
give me more "inside" room to play with options...

>The NORCAL 40A (as used by WA2SI) isn't much more money, and is a
>complete kit.

What I'd REALLY like is for W5AMY to get off the purse and buy me a K2
with the 160/SSB options!

I certainly did, but I'm not the individual who made the peculiar,
unrelated statement here. That was you alone.

> Small world.

No, actually it is the same size as it has always been.

> > I note that you call this

> Would you like me to?

It'd only be fair since Dan made no statement about morse testing
keeping out "riff-raff", "William".

I see your point, Len. I doubt that there are many in amateur radio who
care what you want to do "personally".

I didn't see any statement about someone else having money, Leonard. We
have an indication that you had, at one time, enough surplus "CASH" to
purchase an Icom R-70.

> A kluge is a kluge. A picture of one speaks for itself.

Len, you are a rude churl. If we had a photo of you, perhaps it could
speak for itself.

That's incorrect, Leonard. Anyone who has spent more than a year steadily poking tape on a 28 can reasonably be expected to type at or near the machine's maximum capability.

> It's a fact, visible to anyone around a real communications center,
> that p-tape is what is used for continuous throughput.

Yep, paper or mylar (for tapes used frequently). Trouble is, someone has to input that information to the tape without errors. Someone has to manually assign Message Reference Numbers and (for those who use them) Message Continuity Numbers. Someone has to look up the routers for stations infrequently addressed. There's a lot more to this "continuous throughput" than you've indicated.

> Morsemanship is always "discussed" by morsemen at the highest
> possible rates, of course with zero errors at both ends of the
> circuit. Non-morse communications are always done (according
> to morsemen) at the slowest possible rates and with a maximum
> of errors.

As with CW circuits, RTTY circuits are subject to receiving errors and to transmitting errors. Multipath distortion or "echo" can leave an RTTY circuit useless when the same distortion has little effect on a morse circuit.

> Jimmie dreams his dreams of being the Best, or at least among
> the very best morsemen at a time when the rest of the world has

> Putz.

Tsk, tsk, tsk. I'm proud to be a member of the electronic engineering community and of the Institute for Electrical and Electronic Engineers professional organization. I became a Life Member without paying anything extra and even gained...no more membership dues required from Life Members!

Sunnuvagun!

But, I've never represented myself as being any "highest calibre [sic]" and there are thousands more skilled in the profession than I. Of course, to those who are ignorant of the most basic electrical theories, I'm sure that a working knowledge of most radio circuits would appear as astounding, almost science fiction. [pun not obvious to any long-time Analog readers, heh heh]

From your standpoint as an ex-purchasing agent for a small company who couldn't hack that for more than about a half year, I doubt you possess enough smarts to do a reasonable evaluation of what real engineers do, know, or act. :-)

Sunnuvagun!

Tsk, tsk. You went and used that Yiddish pejorative of "Putz," meaning "penis head," again.

Must be that PCTA extra Double Standard thing. Sir James of Miccolis may or may not slap you on the wrist with a moist hankie for that. Probably not. Sir James has not been in the best of moods since he got his "state of the art" (with tubes) "type 7" unrewarded with gratuitous praise, admiration, and respect for his 1990s design. The noble laureate is concentrating on more nastygrams against those who dare call a kluge a kluge. :-)

So, big "qualified" medical health professional, have you "dialled" and made that "call to authorities" yet? I'm just sitting here waiting for some other things to arrive. Good opportunity for those "authorities" (under your mighty telephoned orders, of course) to come and "have me committed!" :-)

Heh...I knew that and you knew that, but Sir James would make
it a Federal Case of misdirection in this thread to disagree with
his royal Type-Seveness. :-)

Bell Labs made the announcement of the transistor invention
in 1948. The actual invention was done in 1947.

No doubt Sir James wishes the announcement would also have
been done on a broadcast transmitter using a microphone in
series with the antenna a la Reggie Fessenden. :-)

Heap glowing gratuitous praise for the wonderful workmanship, the
beauty of the design, the ethereal glow of the mighty vacuum tubes.

If not, Sir James will raise the Hue and Cry agin ya with multitudes
of mighty paragraphs. :-)

After all, this was Sir James' "state of the art" in amateur radio as
of the early 1990s!

Does anyone in the group have a Butternut HF-6V? I bought a used one, and some of the insulators have cracked.

I have new insulator material, but a couple of the pieces are missing and I can't quite tell the length.

If you had pix, or if it was near enough that I could travel to get pix of the offending parts, I would be most grateful.

TIA - Mike KB3EIA -

Yes...the transmitting distributors do their thing all by themselves.
One racked-up tape will start pushing through as soon as the
other reader finishes...

Sunnuvagun! :-)

Tsk. All the morsemen "know" that they do near-perfect copy
every single time at high rates. :-)

All you mighty macho morsemen can do 100 WPM throughput
for hours and hours continuously... :-)

>As with CW circuits, RTTY circuits are subject to receiving errors and
>to transmitting errors. Multipath distortion or "echo" can leave an
>RTTY circuit useless when the same distortion has little effect on a
>morse circuit.

Wow, World's Greatest DXer spouting propagation effects!

Guess that's why all the other radio services abandoned RTTY
and took up morse on-off carrier keying, wasn't it? :-)

Oh, no, wait...it was the other way around!

Sunnuvagun!

>Uh...Len? You're not doing much communicating via amateur radio, are
>you?

Can't do that legally, World's Greatest DXer. Not on the ham bands.

I'm just as legal as anything on HF in other radio services. :-)

>Does the fact that morse remains a popular mode, in wide use by radio
>amateurs bother you?

No. Amateurs are the LAST vestige of morsemanship in radio.

If amateurs want to keep on recreating the past over and over again,
then I say "have fun, kiddies." Enjoy.

When you PCTA extra blowhards start spouting all the BS about
morsemanship is "necessary" to operate...other than the legal
requirement...on HF, then it's time to send a good old raspberry
to those stuffed-shirt, self-important, olde-tymers who don't have
much but morsemanship to be proud of...

All those amateur morseaholics aren't taking any test when they
are busy keying. What is at stake is whether or not a morse test
has any validity for any amateur radio license test. The FCC doesn't
think so, didn't think so several years ago.

But, big World's Greatest DXer, you aren't pleased with that answer,
are you? You will go right ahead with your "not licensed" schtick
and do personal attacks against any NCTA...because that is the
way you are...another representative of the PCTA olde-fahrts who
demand that all have to endure the test YOU had to do long ago.

Sunnuvagun!

..... hey, they tried ....nobody is perfect....?

The good news is that Powell knows ham radio is really, really, REALLY out here.

The bad news might be that given a Bush win this year then eight more years of a similarly-minded follow-on Republican regime conceivably we could have Powell
running the FCC for another twelve years and gunning for our butts the whole time.

Arrgh.

crunches and the butt tightening exercises have really paid off.

>I use the abandoned frequencies below CB channel 1 and above 40. There are
>also frequencies on the 6 mhz band, and above 30 mhz free for the taking.
>Before you closed minded hams go nuts let me give you an analogy, it is
>like camping on a piece of abandoned land no one is using.

There are no abandoned frequencies.

Those frequencies are assigned to Land Mobile, Aviation, Television Remote
and others.

>Who is it hurting? Many laws are on the books that are not enforced. Like
>jaywalking and going 36mph in a 35 mph zone. Just because we are not
>sheople who follow "laws" blindly you hams get all bent out of shape.

It hurts those who can't use thier ASSIGNED frequencies because selfish,
scumbag thieves have pre-empted thier use of them. You and other scumbags like
you are absolutely no different than punks who steal cars or write bad checks.

>If they (FCC) are not enforcing their rules and no one cares about it why
>do stuck up HAMS care? What 11M DXers do is not hurting your use of ham
>bands, you should worry more about cleaning up your own bands.

Ahhhhh...but the FCC IS enforcing those rules and people ARE being held
liable for thier transgressions.

And I care for the same reason I don't want some jerk going down my
residential street at 65MPH...Just because it's "not in use" at this second
doesn't mean it's not needed for it's intended use. Your reckless behaviour
DOES impact me, whether you care to acknowledge it or not.

If you're "freebanding", you're breaking the law. I hope an FCC official
shows up on your front porch with US Marshals in tow. You deserve it.

http://www.arrl.org/news/stories/2004/10/14/1/?nc=1

So we'll have to deal with it. But it could have been a *whole* lot worse if the FCC hadn't (grudgingly) paid attention to ham radio's squawks about the interference problem.

BPL is going to be out there but it'll be far from the original slash and burn form espoused by it's big biz proponents and supported by it's political sycophants. This R&O gives us HFers the tools we need to ward off BPL if the crap actually becomes a problem in your neighborhood.

A tiny, obscure number of us radio hobbyists in a population approaching 300 million has had a visible impact on a hot potato issue with a high-visibility federal regulatory agency. We couldn't have reasonably expected more. We done good despite the doomsayers nonsense.

But a Haynie has put it the devil may yet be in the so far undisclosed details of this R&O so stay tuned . .

> from Life Members!

Doesn't matter how you came into your membership, Lennie. If I were an officer of the IEEE and had occassion to see how you "represent" engineers in general and the IEEE in particular, I'd see what I could do to remove you from my rolls.

> Sunnuvagun!

Sunnuvagun, indeed...

> But, I've never represented myself as being any "highest calibre [sic]"
> and there are thousands more skilled in the profession than I.

And there are even MORE thousands more skilled than you in the Amateur Radio Service.

And yes, you HAVE represented yourself as being of the "highest calibre", and yes that suggestion is VERY sic[k].

> Of course, to those who are ignorant of the most basic electrical
> theories, I'm sure that a working knowledge of most radio circuits
> would appear as astounding, almost science fiction. [pun not
> obvious to any long-time Analog readers, heh heh]

Those of us that use the technology everyday are hardly "astound(ed)" by
it...And certainly in as much as YOU had absolutely nothing to do with it,
Lennie.

> From your standpoint as an ex-purchasing agent for a small company
> who couldn't hack that for more than about a half year...(SNIP)

Wrong again, Lennie, but then facts aren't your strongpoint.

> (UNSNIP)...I doubt you
> possess enough smarts to do a reasonable evaluation of what real
> engineers do, know, or act.

Then we have something in common, Lennie. Neither did you

> Sunnuvagun!

Sunnuvagun, indeed.

> Tsk, tsk. You went and used that Yiddish pejorative of "Putz,"
> meaning "penis head," again.

Well, Lennie...It fits, what can I say? You lie. You don't get your
facts right. You misrepresent factual events, you are deceitful and just plain
lousy as human beings go.

> Must be that PCTA extra Double Standard thing. Sir James of
> Miccolis may or may not slap you on the wrist with a moist hankie
> for that. Probably not. Sir James has not been in the best of moods

> those who dare call a kluge a kluge.

So, while chastising me for some perceived personal transgression, you
furhter perpetuate yet another LennieLie by yet again using diminutives re: Jim
Micciolis, despite the fact that he does nothing of the like to you.

> So, big "qualified" medical health professional, have you "dialled"
> and made that "call to authorities" yet? I'm just sitting here waiting
> for some other things to arrive. Good opportunity for those
> "authorities" (under your mighty telephoned orders, of course) to
> come and "have me committed!"

Indeed I did have some conversations with folks very close to you, Lennie.

Interesting stuff, too. Brought me up-to-date on Chapter 5150, and what
are recordable events, etc.

A report by a duly-licensed healthcare worker is a recordable event. It
may or maynot warrant an investigation, however files are started and any

similar report by another licensed person or law enforcement flags the subject's name in future investigations.

Aren't you glad you asked?

Welp, he continues to shoot his mouth off.

I never stopped to consider just how many stinkers were in amateur radio, yet each time one shows up, he's usually wearing the 20WPM badge very prominently.

I did notice the loud one pining for an Elecraft kit with the 160M/SSB option. Hi, hi! I wonder if the rubberband man will notify him that 160M is for CW, as he did me? No, no, of course not.

He cracks me up though. He needs his wife to get off of her purse so he can buy one. I thought he had both a nurses paycheck and a disability check every month? Kind of obvious who really wears the flight suit in that cockpit.

Indeed. You managed to cobble together a paragraph which doesn't
address my comments at all.

> Tsk. All the morsemen "know" that they do near-perfect copy
> every single time at high rates. :-)

Tsk. I've not seen that written except by you. RTTY is only as perfect
as a the typist who inputs the material and then only if there are no
noise bursts to create additional errors.

> All you mighty macho morsemen can do 100 WPM throughput
> for hours and hours continuously... :-)

Really?

> >As with CW circuits, RTTY circuits are subject to receiving errors and
> >to transmitting errors. Multipath distortion or "echo" can leave an
> >RTTY circuit useless when the same distortion has little effect on a
> >morse circuit.

> Wow, World's Greatest DXer spouting propagation effects!

Is he here too? Why, I was spouting propagation effects myself! I
happen to know quite a bit about it. Maybe the World's Greatest DXer
and myself can get together and give you a few pointers on the subject.

> Guess that's why all the other radio services abandoned RTTY
> and took up morse on-off carrier keying, wasn't it? :-)
>
> Oh, no, wait...it was the other way around!
>
> Sunnuvagun!

I'm not too concerned with what other radio services do. I'll continue
to enjoy the use of morse. I do hope that's all right with you.

> >Uh...Len? You're not doing much communicating via amateur radio, are
> >you?
>
> Can't do that legally, World's Greatest DXer. Not on the ham bands.

Is he here? Funny, that's my view of you too.

> I'm just as legal as anything on HF in other radio services. :-)

"Other" radio services, huh? I'm sure you're having a ball on lots of
them.

> >Does the fact that morse remains a popular mode, in wide use by radio
> >amateurs bother you?
>
> No. Amateurs are the LAST vestige of morsemanship in radio.

You say "No" but continue with the "LAST vestige" stuff. It sounds as
if you're bothered by the use of morse by radio amateurs.

> If amateurs want to keep on recreating the past over and over again,
> then I say "have fun, kiddies." Enjoy.

We're not "kiddies", Len and you aren't one of us. I'm not recreating
anything. I'm using something which is there. Are you recreating when
you use SSB, AM or FM?

> When you PCTA extra blowhards start spouting all the BS about
> morsemanship is "necessary" to operate...other than the legal
> requirement...on HF, then it's time to send a good old raspberry

> to those stuffed-shirt, self-important, olde-tymers who don't have
> much but morsemanship to be proud of...

Don't let it worry you, Leonard. You aren't involved in the slightest.
You are to amateur radio what a chainsaw is to a symphony.

> All those amateur morseaholics aren't taking any test when they
> are busy keying. What is at stake is whether or not a morse test
> has any validity for any amateur radio license test. The FCC doesn't
> think so, didn't think so several years ago.

Why should any of that concern you? You aren't in. You aren't getting
in. The FCC doesn't seem to have taken any action except to reduce the
HF morse testing speed to 5 wpm. Why do you think that is?

> But, big World's Greatest DXer, you aren't pleased with that answer,
> are you?

Is he here too? I'll bet he could give you some valueable insight as to
how to better use your venerable R-70.

> You will go right ahead with your "not licensed" schtick...

Yes, I will. It happens to be true. You aren't in. You have no plans
to get in. You have no experience in amateur radio. You have no stake
in amateur radio.

> and do personal attacks against any NCTA...because that is the
> way you are

That's not quite correct. I'll be happy to take shots at you though.
It doesn't seem to matter if people take pokes at you or razz you or if
they are civil to you. You continue to insult and demean. You deserve
everything you get here, poor old piranha.

> ...another representative of the PCTA olde-fahrts who
> demand that all have to endure the test YOU had to do long ago.

You can't possibly endure the test I had to take. The test I had to
take isn't being given any longer. You can't even take the same written
test.
You're an old fart, Len and you're on the periphery of amateur radio. I
suppose you'll stay there.

In actuallity, the other radio services are abandoning RTTY in droves.

Too many mistakes. Too unreliable.

Of course the World's Greatest Professional Radio Engineer hasn't
addressed that.

I can only assume that is because the LAST time he had any significant
exposure to any message handling on HF was in 1950-something at A-something-A,
a rear area radio relay station at which he was not even an operator...just a
mechanic...so says HIS oft-repeated MOS.

Your answers are nonresponsive.

Since you cannot produce any
examples of someone threatening
another here, here are some possible
ones for consideration:

"Feel free to walk around this area shouting your "JUNK!" epithets.
If you do, make sure you have life insurance..."

"Some one-by-twos need a two-by-four harshly applied to them..."

"Let's see...modern fighting tools (since at least 1700s) allow "just a
few ounces of finger pressure" to allow reaching out and touching
someone supersonically. No need for physical confrontation up close
and personal."

"Danny boy, consider that you make a big target. Fills the sight
picture very nicely. Just a few ounces of pressure..... [not talking

about radio at all but then Danny boy wasn't doing that, either]"

Go Riley! Take the idiot Baxter to court! Let's put that POS behind bars. Glenn Baxter is an a-hole and is destroying amateur radio with idiotic playing of his phone answering machine on the radio. His AARU is a joke and nothing more than a way for him to make money. What a scam - what abuse of the radio - confiscate his equipment, fine him big, put him in jail.

You betcha! Had the envelopes (Outgoing and return.) printed before
the rig cooled down. I QSL 100% anyway...and yeah, I've learned that a
"greenstamp" (Or two, depending on the QTH and/or op.) helps the
return rate on DX QSL's.

Take care es...

I recall trying to work VY1JA in SS last time I used the K2 in that contest. Of course there was an enormous pile on him (YU/NWT is *the* toughest section in SS). He worked a bunch, then sent "QRP ONLY" and us peanut whistles had a shot at him. And yes, the bigger guns stood by while we did. Good ears, that one!

Of course it was a classic case of game theory in action. 'JA wanted to work the most stations possible, and sorting-by-power let him work more. The higher-power folks in the pack realized that doing what the rare one wanted would increase the chance of a QSO, so they cooperated.

>At least 1XAM/1MO and 1QP had authorizations to operate from thier
>respective locations.

That's true - and it brings up some interesting historical points.

Some hams are under the mistaken impression that there was a time when hams had "everything below 200 meters all to themselves".

This stems from a mistaken interpretation of the 1912 treaty that limited amateurs to "200 meters and down".

In fact what happened was simply that before the 1912 treaty, amateurs could legally use waves longer than 200 meters, and afterwards most of them could not. (There was a special license that inland amateurs could get that authorized operation on 375 meters, but not many were issued or used because most hams were on 200 meters)

But at least in the USA, the amateur station license of those times specified the wavelength used. Since the limited knowledge of the time proclaimed that longer wavelengths were better for longer distances, almost all amateurs asked for 200 meter station licenses, and operated there. If a ham wanted to use 100 meters, he/she needed another station license, often with a different callsign.

And amateurs were not the only ones allowed below 200 meters. Some commercial and experimental stations tried the "short waves" too. But it was amateurs who demonstrated their usefulness in long distance communication by means of the first transatlantic shortwave QSO, and later by transpacific and transcontinental QSOs - all made with simple equipment and low power.

actually there is a valid point to be made here beside the obvious troll bait. I am afraid there is more to operating than plugging in a radio and talking. there is some technical knowledge needed to adjust and operate the equipment properly, unfortunately freebanders bypass the exam process that makes sure hams have some minimal level of knowledge. the other part of this is the public identification of hams by callsigns. since callsigns are issued by the government and public records are available it is possible to contact stations with bad signals or that are causing interference for one reason or another. with freebanders and even cbers operating on the legal frequencies but with illegal equipment that is not possible. I have frequently identified interference as far up as 28500khz from stations half a country away operating obviously maladjusted equipment from 27025khz and 28085khz. These operators can of course not be identified but are obviously using excessive power and wildly maladjusted equipment. a legal ham who was causing interference like that would be identified and corrected either by other hams or the fcc very quickly. as it is now freebanders can be interfering with operations they can't even hear, or that they hear but don't realize are legitimate commercial or military users, and there is no quick way to correct the situation.

I've done the same thing. Used lots of coat hangers and a pair of
dykes to make the hairpins. None of the radials ever got tangled in
the mower, and by the next growing season, none of the radials could
be seen. I didn't care if the steel coathangers rusted away in the
soil, but I used solid copper 18ga rather than copperweld so it
wouldn't rust.

The antenna was an 18vs set to 40m.

> And an EE + LLD . . .

Actually, knowing something about the technology the FCC Chairman has authority over does not require an amateur radio license, although that would suggest some minimal amount of comprehension of the medium he/she is administering. The LLD (Doctor of Laws) is always problematic. An LLD suggests many ethical character problems and a mind generally not interested in real-world science or engineering. An experienced FCC field engineer who understands both the technology of radio and the politics of Congress, as well as the politics of the many communications special interest groups, would most likely be the best candidate for FCC Chairman. I believe that in days gone by, FCC engineers were promoted (actually nominated and approved by Congress) to Commissioners. Don't know if any made it to Chairman. For sure, they wouldn't stand for today's BPL stupidity and nonsense.

Here's another of Brain's "Running My Mouth Off To Be A Smart Alec" rants.

I took the effort to make this a seperate post so we can start keeping track of all of his stupid assertions and their follow-up responses.

He insinuated that Dave Heil, K8MN, said that it's forbidden to know the allocations of other nation's Amateurs.

Brain made the assertion, so let's see him back it up.

He also insinuated that Dave said that the ONLY way to work DX is to "blindly tune up and down the bands hoping we snag a contact with a needed country."

I want to see THAT post also.

I'm not asking Brain to to anything but produce the posts wherein Dave made the statements to which Brain alledges...

Where's the beef, Brain?

Steve, K4YZ

I think you left out a word there, Len.

In any event, "CW" Morse Code is *not* the slowest communications mode
in use.

And that's a fact.

> I've seen it up close
> and personal throughout this whole past half century.

Maybe "up close", but you haven't been operating Morse Code for this
whole past half century. Kim has more Morse Code operating experience
than you do, Len.

> It is evidenciary
> in the REST of the radio communications world.

What is?

> The slowest teleprinter rates of a half century ago was 60 WPM and,
> to some degree still with old, worn-out surplus teleprinters of that
> era.

So?

> With Mark-Space shift of 170 Hz, those old, cranky 60 WPM
> Teletypes need less than 400 Hz of bandwidth to transmit in FSK.

That's about right. They also require considerable additional
equipment to send or receive.

> Those ancient machines (already around well before Jimmie was
> born) can run continuously at 60 WPM throughput as long as they
> are fed paper rolls and paper tape.

They require no maintenance? No replacement of ribbons, no
lubrication, no cleaning, just paper and tape?

If so, why did you call them "cranky"?

The point you gloss over is that bit about the paper tape. Somebody
has to punch that tape, complete with "LTRS" and "FIGS" and "LF" and
"CR", or the message is quickly garbled.

> I once watched over 200 such
> teleprinters busy, busy working continuously 24/7 in the same
> place on several "networks."

"Watched"...that's the key word.

Did they require no maintenance?

And why are you living in the past, Len?

Several years back, hams pioneered the use of a new mode called
PSK-31. Does about 50 wpm maximum in about a 32 Hz bandwidth. Does
upper and lower case, and more symbols than the old 5 level Baudot
code. Easily implemented on PCs with free software. Even has a level
of error correction built in.

Lots of other "soundcard modes" in use by hams, too.

Why all this focus on old RTTY machines?

> The old electromechanical Teletypes of the 1970s can sustain 100
> WPM throughput as long as the old 1940s era machines did. A
> modern PC can emulate either of them and go faster, having much
> more mass memory to store archives of network messages.

Of course.

But the fact remains that *somebody* has to type the messages in. And the system can be no faster than the typing speed of that operator, and no more accurate. If the operators type 10 wpm, the system is a 10 wpm system, no matter how fast the machines are.

In the WW2 era, high speed Morse Code systems were developed and used on HF radio. The sending operator would send Morse into a recorder first. Then the recording would be used to key the transmitter at very high rates of speed - several hundred WPM was used successfully when conditions were good. At the receiving end, the high speed transmission was recorded, then played back at slower speed for transcription.

The systems were developed not for transmission speed but to reduce the ability of others to DF the transmitting station.

Hams are currently using a modernized version of the technique for meteor-scatter communications.

> It is the EXCEPTIONAL rarity now to find any two morsemen at
> each end of a ham radio circuit

Yes, it is a rarity to find two operators at each end of a circuit. Usually it only takes one.

> who can do SUSTAINED "network"
> communications by on-off-keyed "CW" morse at 40 WPM for
> hours.

How do you know, Len? You don't operate CW/Morse. You're not a ham. Maybe you've seen it done a few times, but that's all.

> HOURS. Networks need hours if the number of messages
> are great.

So? You keep telling us that "ham radio is a hobby". If so, why all the fuss about "networks" and "great numbers of messages"?

What about just communicating with each other on the radio? Morse Code is really good for that. But you wouldn't know about that...

> I've known a couple of speed freak morsemen who had regular
> QSOs along the California coast, doing bursting rates of about
> 60 WPM for a minute or so at a time. I took their word for it, not
> hearing their ham transmissions.

So you really don't know at all.

> A minute or so at a high rate of
> morse is not good enough for real networking, copying down and
> recording for later re-transmission of message content.

Why is that important to hams?
>
> >However, under dire circumstances when, presumably, a CW net would be

Not true at all.
>
> All that said, I think that radiotelegraphy IS faster than the old British
> and French semaphore communications systems. Morse radio-
> telegraphy IS faster than the pony express and IS faster than paper
> surface mail. Radiotelegraphy does reach out farther than the human
> voice can transmit unaided by anything but the human body.

So you were wrong about it being the slowest mode.

> Other than that, morse radiotelegraphy still remains the slowest
> mode of communications available to radio amateurs.

Wrong again, Len!

The speed of *any* mode is highly dependent on, and limited by,
operator skills. If the operators can only type 10 wpm, then they can
do 10 wpm RTTY, regardless of how fast the machines go. If someone can
only write at 20 wpm, then voice messaging speed is 20 wpm. Or less,
given the need for phonetics.

This isn't a complicated concept, but you avoid it for some reason.

> Those who want to fantasize that morse is "faster" or "better" will
> have to set up a controlled test NOT in morse favor to demonstrate
> that alleged fact.

Like what? Allowing the RTTY machines to be fed prepunched paper tape,
but requiring the Morse operators to work real-time?

Do you think that's a fair test?

> Let all those might macho morsemen sustain
> 20 to 40 WPM continuously for an 8-hour period...and do the
> communications with LESS error than any teleprinter circuit.

All depends on the conditions, Len. Does FSK "always get through"? How do you account for the additional cost, complexity and power requirements of RTTY?

btw, back in my college days, the University ham station had a pretty good amateur RTTY setup. Model 19s and similar stuff, TT-L2 demodulator, Heath scope for tuning in, paper tape, the whole shebang. Plus a Collins S-line, big antennas, NCL-2000 amplifier, etc. I got pretty good at using it. Was a lot of fun.

So what it comes down to, Len, is that I have far, far more experience with and knowledge of RTTY than you have of Morse Code.

That's why I said to make that recommendation, rather than make them
comply. This would then lend a smidgen of credibility to the claims
that non-amateurs should have no say in amateur radio rules.

although that

> I wonder who wrote that rule?

I don't recall if it is in part 97 or an interpretation, but there is official word from the FCC that transmissions *specifficaly aimed at amateurs* is diffeernt from that aimed at *anyone* which *is* considered broadcastaing. So if it is to anyone, it is broadcasting. If it is to an individual or specific group of people, then it's not. I'm just explaining. I wrestled with this as well and it is certainly arguable...as is anything here... So, what about religious transmissions? If they hope to convert, then it's broadcasting. If they are only targeting religious people, then it's not, I guess. 73,

So it is okay to "threaten" another as long as they were "threatened"?

Quite frankly Brian. If anyone threatened me in here, legitimately and identifiably, I would be to the proper authorities so quickly that the person threatening me would know about it in a few minutes.

Otherwise why waste the time?

And that is Quitethetruth!

Only on the religion bands... :-)

I think the point is that the material in the bulletin/broadcast
needs to be that only interesting to hams or prospective hams.
But any subject in a true 2 way communication (QSO) is allowed
except for indecent and patently offensive material.

I wonder if I can get a US patent on something patently
offensive? ;-) I already have 14 "utility" patents
(those are the real patents, don't let some shister
lawyer sell you a "design" patent. A design patent is
really just a trademark of sorts, and is trivial to
circumvent).

>address my comments at all.

Tsk. One is REQUIRED to "address your comments," your
royalness? :-)

>> Tsk. All the morsemen "know" that they do near-perfect copy
>> every single time at high rates. :-)
>
>Tsk. I've not seen that written except by you. RTTY is only as perfect
>as a the typist who inputs the material and then only if there are no
>noise bursts to create additional errors.

Tsk, you don't "see" much... :-)

More tsk...you forget that a p-tape TTY message can be read,
scanned, checked, changed if needed by a new tape, checked
all over again...usually at a message center or central before
sent as RTTY. Or done "off line" at a ham station just like a PC
e-mail message. The obvious advantage is that the outgoing
message as well as the incoming reply can be stored easily
without resorting to a paper form.

Those "noise bursts" affect manual morse reception as well,
unless the sending rate is so slow that it occurs between dots.
Technical tsk: The noise bursts are primarily of amplitude. They
do have some wideband frequency content, but the common noise
experienced at home hobby ham stations is primarily impulse noise
with more amplitude (think AM) content that have less effect on
Frequency Shift Keying. (think FM)

RTTY can be resent easily and quickly without resorting to any
paper. At 100 WPM continuous rates that still goes faster than
common manual morse. Special character coding can include
FEC (Forward Error Correction) or ECC (Error Correction), the latter
able to automatically correct singular bit errors and to indicate
double bit errors.

The claim by many morsemen is that "CW gets through when
nothing else will..." which is a hoary old myth dating from about
the 1930s and morsemen bragging that they were better than the
voice communicators. The only conclusion on "noise burst" circuit
problems is that most of those morsemen were "filling in the blanks"
and not doing real copy. :-)

Despite all your negative criticism against non-morse communications
methods, all the other radio services engaged in communications
have dropped morse on-off keying modes. On-off keying of a carrier
just doesn't cut it in the communications world of now.

>I'm not too concerned with what other radio services do. I'll continue
>to enjoy the use of morse. I do hope that's all right with you.

Enjoy it all you want. I was never against any morse USE...only
against the TEST for same for radio operator licenses.

If you want to claim extraordinary or even ordinary prowess of
superhuman (or even ordinary superior human) ability, feel free to
brag up a storm complete with your usual windy rhetoric.

None of that arrogant thundering is any sort of case to retain the
old morse manual test for licensing for any newcomers.

>"Other" radio services, huh? I'm sure you're having a ball on lots of
>them.

I have. :-)

>> No. Amateurs are the LAST vestige of morsemanship in radio.
>
>You say "No" but continue with the "LAST vestige" stuff. It sounds as
>if you're bothered by the use of morse by radio amateurs.

Tsk. No. Only by the excessive self-righteous self-proclaimed
superiority (as a 1930s expert radio morseman) and expecting
all others to emulate your mighty and superior accomplishments.

What YOU had to do long ago to get your license just does not
apply to the radio world of now. The higher morse rate testing was
an artificiality of old, a left-over from the past when the only method
of radio communications was by on-off keying.

>We're not "kiddies", Len and you aren't one of us. I'm not recreating
>anything. I'm using something which is there.

Tsk. You are acting the usual arrogant bully when expecting all
to agree with your idea of what constitutes "fun" in ham radio.

All those old, tired, worn-out, dead cliches about "absolutely
needing to prove manual morse capability to work HF" is just a
heap of artificial BS left over from earlier times...repeated and
repeated and repeated by the ARRL for so long that the league
lost sight (and hearing) of what it originally meant.

If you and the other mighty morsemen want to preserve and protect
morsemanship through required manual morse testing, then you
had best petition the FCC for changing the ARS to the Archaic
Radiotelegraphy Society. That's what the HF part of U.S. ham
radio became decades ago. That's what the testing requlations
required. A name change would make the ARS more meaningful
to what it was.

>Don't let it worry you, Leonard. You aren't involved in the slightest.
>You are to amateur radio what a chainsaw is to a symphony.

Tsk, tsk. Mike Coslo had an innovative use for a chainsaw as
a shallow trench maker for radial wires. You didn't like that. :-)

I'm sure you look down your nose at all who don't agree what you
consider is vital to ham radio enjoyment...that's been demonstrated
in your on-going comments to all who have different interests in here.

>Why should any of that concern you? You aren't in.

Don't have to be "in." :-)

The FCC regulates U.S. civil radio. The laws of the USA don't require the FCC commissioners or staff to hold amateur radio licenses in order to regulate U.S. amateur radio.

Despite your mighty brass-section trumpeting about "needing to be 'in' in order to 'direct things' in ham radio," YOU are NOT a radio regulator. YOU are nothing but a mighty wind section demanding all go along with your ideas, conceptions, and general wild hairs of what 'should be done' and 'who is allowed to regulate it.' :-)

Not an orchestra by any means, just a bad brass band, out of step with the times yet demanding that all keep the old things.

>You aren't getting in.

Are you going to STOP me?!? Oh, my. Tsk.

>The FCC doesn't seem to have taken any action except to reduce the
>HF morse testing speed to 5 wpm. Why do you think that is?

They seem to be overwhelmed by the olde-fahrt olde-tymer morsemen who are blindly believing in the morse religion and have filled the ECFS' 18 petition commentary with same. :-)

>Is he here too? I'll bet he could give you some valueable insight as to
>how to better use your venerable R-70.

That general purpose receiver is still working as good as it did when I bought it and when I tested it to its factory specifications shortly thereafter. Icom has a good product there.

Tsk. Two NCTAs in here having the same Icom receiver (both still working) seems to be a sore point with you. Poor baby. Go play with your Orion, why don't you? That ready-made will bring you up to the "state of the art!" :-)

>> You will go right ahead with your "not licensed" schtick...
>
>Yes, I will. It happens to be true.

No, it is NOT "true." You don't regulate U.S. amateur radio. All you are is an olde-tymer snarling about all having to do as you did before they are allowed to talk about it, discuss it, or anything else.

Tsk. Elementary civics teaches us that U.S. federal laws are open for dicsussion by all citizens according to the First Amendment of the U.S. Constitution. You seek to BAR any citizen from talking about regulations of radio hobby licensing. You aren't any member of any bar association, so don't try to throw your weight around where you are weightless.

>You aren't in. You have no plans to get in.

Tsk. I don't tell all in here. :-)

Neither am I required to tell YOU on YOUR demand about anything.

Heh heh heh. Ever the demanding arrogance of someone who likes
to push folks around.

First Amendment. Refresh your memory with what it means.

Feel free to review Title 47 C.F.R. Part 97 and show us all where
ONLY already-licensed radio amateurs can talk or discuss the
amateur radio regulations. Show your work.

>You have no experience in amateur radio.

I have MUCH experience in RADIO. It's true that I have no amateur
radio license. It's also true that I have a commercial radio operator
license and had several other radio licenses.

See Part 97 again and tell us all the sub-part that allows ONLY
already-licensed radio amateurs to talk about amateur radio.

>You have no stake in amateur radio.

Tsk. There you go again DEMANDING a "stake!"

Be advised that von Helsing may give YOU a stake.

Wooden. [I would suggest wormwood as fitting...]

>It doesn't seem to matter if people take pokes at you or razz you or if
>they are civil to you.

Heh heh heh heh. I'm a long-time veteran of computer-modem
communications with a survivor's thick virtual skin. :-)

But, very very FEW PCTAs in here have been civil to me. Begin
with Jim Kehler, continue through assorted types who couldn't
take it in here and left, on through a couple of now-deceased
PCTAs who weren't able to continue for obvious reasons.

ALL of them insisted and insisted and insisted that the morse
code test "must" stay...as "tradition," as a number of invalid
reasons, but (unvoiced) was the real reason, that of making all
newcomers jump through the same hoops they had to jump
through.

>You continue to insult and demean.

Tsk. I return fire with fire. :-)

You don't like it because you imperiously demand that all the
"firing" be yours against others. Tsk.

>You deserve everything you get here, poor old piranha.

Tsk. Someone wrote that all were "civil TO me?" :-)

Hello? Can you understand 'hypocrisy?' :-)

>You can't possibly endure the test I had to take.

BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH!!!!!!!

>The test I had to take isn't being given any longer.

Hehehehehehehehehehehehehehehehehehehehehehehehehehehheeehhheeeee.

>You can't even take the same written test.

No need, is there? Tsk, tsk.

>You're an old fart, Len and you're on the periphery of amateur radio.

I did have some bean soup a couple days ago. Black bean.
Very good with a salad and a sandwich. No flatulence, though.

I come in here and sense a great deal of flatulence from you
olde-tymers boasting that NOBODY "could endure the kind of
test they endured."

Funny as hell, this newsgroup. :-)

>I suppose you'll stay there.

Maybe I will. Maybe I won't.

Either way, YOU have NO CONTROL over it!

Sunnuvagun! :-)

>officer of the IEEE and had occassion to see how you "represent" engineers in
>general and the IEEE in particular, I'd see what I could do to remove you
>from my rolls.

Tsk, you can't even remove rolls from a bakery... :-)

1. Nursie is NOT a member of the IEEE, can't even qualify.

2. Nursie is NOT therefore any "officer" in the IEEE.

3. I've been in the annual IEEE Membership Directory for years; anyone having an access to that book can see it.

4. Nursie's "removal vision" is seeing things in his fantasy wish-fulfillment.

> Those of us that use the technology everyday are hardly "astound(ed)" by
>it...And certainly in as much as YOU had absolutely nothing to do with it,
>Lennie.

Tsk, tsk. Many olde-tymers in here have expressed wonder at the
magic of radio. That's a nice emotional thought, nothing wrong with it.

However, "magic" it isn't since it is bounded by laws of physics and
repeatable by those who can handle it.

>> From your standpoint as an ex-purchasing agent for a small company
>> who couldn't hack that for more than about a half year...(SNIP)
>
> Wrong again, Lennie, but then facts aren't your strongpoint.

So...you LIED about working as a purchasing agent? :-)

>> Tsk, tsk. You went and used that Yiddish pejorative of "Putz,"
>> meaning "penis head," again.
>
> Well, Lennie...It fits, what can I say? You lie. You don't get your
>facts right. You misrepresent factual events, you are deceitful and just
>plain lousy as human beings go.

Tsk. You DID use the word "Putz." Again. Many times.

That's not "deceit." Everyone else who reads here saw it. :-)

> So, while chastising me for some perceived personal transgression, you
>furhter perpetuate yet another LennieLie by yet again using diminutives re:
>Jim Micciolis, despite the fact that he does nothing of the like to you.

Tsk. I've written nothing to some "Jim Micciolis." :-)

>> So, big "qualified" medical health professional, have you "dialled"
>> and made that "call to authorities" yet? I'm just sitting here waiting
>> for some other things to arrive. Good opportunity for those
>> "authorities" (under your mighty telephoned orders, of course) to
>> come and "have me committed!"
>
> Indeed I did have some conversations with folks very close to you,
>Lennie.

Tsk, Tsk, TSK! You've had NOTHING of the kind. You blatantly LIE.

The only "conversations" you've had are with your alternate
personalities in your head...

> Interesting stuff, too. Brought me up-to-date on Chapter 5150, and what
>are recordable events, etc.

"Chapter?" What "chapter" and from what? A work of fiction? Nursie
seems to be confusing Lewis Carroll's "Through The Looking Glass"
with reality. Too many trips through that "glass" with the Mad Hatter...
:-)

> A report by a duly-licensed healthcare worker is a recordable event. It
>may or maynot warrant an investigation, however files are started and any
>similar report by another licensed person or law enforcement flags the
>subject's name in future investigations.

Tsk. More implied threats, compounding the original lie. Nursie's
list of threats grows and grows like a magical beanstalk...but with
no giant at the top...

Want "investigations?" Investigate your own blathering outpourings
of implied threats in here. Plenty enough for some shrinks to make
a recycled paper of...

Feel free to send a letter to Tom Ridge, if you want. :-)

Or the FBI. Or the CIA. Or the DIA. Or even the IBEW. :-)

[try not to use crayon again...they didn't like that the last time...]

Tsk. Get some REAL medical help, nursie...your meds just
aren't working...too many side effects visible to all readers here.

Kind of puts the "command pilot" wings on a different uniform... :-)

I still get a kick out of "pilot in command"...for a little two-seater
single-engine general-aviation aircraft... :-)

Gosh, with all the "state of the art" expertise floating around in
here (outgassed by the PCTA), it should be an easy snap to
come up with a "unique, one-of-a-kind" world-beating on-off keyed
CW rig on a weekend...and then spend another weekend making
a glorious personal web page trumpeting the Nobel-level
achievement. :-)

It is indeed actually in part 97. It must be intended for amateurs and the
content must be amateur related material, ie things like rule changes or
effect of BPL but not other material such as religious material, general
news, etc.

The ONLY SURE way to not have problems with BPL is to NOT HAVE BPL AT ALL.

The Power Companies have a really crummy record of taking care of their
power line noise. Which is also illegal.

Riley even said " you can't expect them to shut down their entire grid for
one ham operator".

This after being plauged for over 5 years with PL noise.

The FCC is a joke.

Would you like me to re-post what Dan wrote and what you replied? Your
memory must be fairly short if you can't recall that. It was only a few
short days ago. Dan's comments had nothing to do with keeping riff-raff
out of amateur radio.

1. I'll point out for a fourth, fifth or sixth time, I've never claimed to be the world's greatest DXer--but I thank you for the compliment.

2. Your statement is not only incorrect, it is deliberately so. Not being required to know the amateur allocations of foreign countries is nothing at all like not being permitted to know. Do you know what they call a person who tells a deliberate untruth?

Mike,

Are you writing of the fiberglas insulators in the main vertical tubing?
If so, the length isn't critical and can be compensated for in tuning
the antenna, something you'll have to do anyway. An inch or so of
exposed insulator should do it. Get plenty of the stuff inside the
aluminum tubing for strength.

The tube insulators are okay. The parts that are cracking are the 1/4 or 3/8 inch flat insulators made of plexiglas or the sort. Mine are crazing, and a couple are broken. The missing parts of the borken ones are the problem.

Dan im sure that is going to be the Norm. First they will ID the problem which will probably take at 6 months to do. Then with all the Stall tactics one problem could take years, if ever to be resolved. All Powell did was give Lip Service, dont expect any real enforcement.

Yup! Easily then if not later. If the current administration is still in at that time, it may even be later - if at all. Remember that conservative folks of the neo stripe *don't* like treaties, and this is a treaty matter.

A conservative type of the old school...

You may not be alone, but I doubt that you have much company.

The ITU amateur allocations for Regions I, II, and III are widely available in print or on the web. That level of detail is generally more than adequate to know where to look for amateurs in a certain part of the world.

If you are detail-orientated enough to need to know the allocations (band-edges/mode segments) for each of the more than 300 DXCC entities then I sincerely doubt that information is routinely available without exhaustive research into each countries PT&T regulations.

As for me, the knowledge of the Region II US allocations is adequate to keep me "legal", and I will assume that residents of the other 300+ entities are similarly mindful of their allocations.

It is adequate to me to know that Tananarive is in Region I, therefore a 40M contact with 5U7AR is probably only possible between 7.000 and 7.100 MHz. It will be up to 5U7AR (not me) to know whether that allocation is valid in his "entity". If I hear him on 7.050MHz, I will assume he can legally operate there, without me needing to be conversant with his allocations as detailed in the "Part 97" of Madagascar.

He can count out any ARRL appointment after his "~morse code test is a
disincentive to morse code use~" idea.

I'm happy to be able to help you on this one, "William".

Dan's statement was:

"As in front of the FCC? Most certainly. I never said being CW tested
makes you have any sense."

You replied:

"But that used to be one of the battle-cries for the PCTA."

I'm all for reviving that old PCTA battle-cry, "Most Certainly!"

Sheesh.

637. FCC issues forfeiture order against Jack Gerrittsen, formerly KG6IRO

Newsgroup: rec.radio.amateur.policy

From: Splinter <splinter48708@sbcglobal.com.nospam>
Message-ID: <qh41n0hdv32769ju5bquhpjkmn45a5tnae@4ax.com>
Source record: 98480

FCC Affirms Fine for Former California Amateur Licensee
NEWINGTON, CT, Oct 15, 2004--In an October 5 Forfeiture Order (FO), the FCC has affirmed a $10,000 fine it proposed earlier this year to levy on Jack Gerritsen, ex-KG6IRO, of Bell, California. The FCC asserts that Gerritsen doesn't have an Amateur Radio license but continues to operate. The FCC's Wireless Telecommunications Bureau (WTB) promptly rescinded its 2001 Amateur Radio license grant to Gerritsen after learning of his California court conviction for interfering with police communications. Imposing a fine on Gerritsen is the next step in a case that eventually could lead to criminal prosecution.

Responding to the earlier FCC Notice of Apparent Liability (NAL) in July, Gerritsen maintained that he still has a ham ticket. He asserted that the NAL does not show that his interference conviction is under appeal, that the set-aside of his amateur license was unfounded and is only a claim made by Commission personnel; that the set-aside does not prohibit him from transmitting on the amateur bands because he holds a valid license, and that any possible suspension of his license is pending a hearing, making the NAL moot until a suspension actually occurs.

The FCC is not buying his arguments, however, and it cited chapter and verse to back up its Forfeiture Order. Section 1.113(a) of its rules gives the WTB 30 days from publication to modify or set aside an action, such as a license grant, on its own motion, the Commission pointed out. As a result, Gerritsen's amateur license application has reverted to "pending status."

"Consequently, no license exists authorizing Gerritsen to use the amateur frequencies he was found to be using in the NAL," the FCC said in the FO.

Gerritsen also has tried to argue that he has preserved his license by seeking a hearing under ï¿½1.85 of the FCC's rules and, further, that he's been told by FCC personnel that he will get a hearing.

"We find that Gerritsen has misinterpreted both ï¿½1.85 and the correspondence he has received from the Commission," the FCC concluded. The Commission pointed out that ï¿½1.85 spells out when the FCC may suspend an operator license, but since Gerritsen has no license, just a pending application, there is no license for the Commission to suspend, and ï¿½1.85 doesn't apply. The WTB did tell Gerritsen, however, that his amateur application would be designated for a hearing to determine if he's qualified to be a Commission license.

"Neither ï¿½1.85 nor the correspondence Gerritsen received from the Commission granted him an amateur license or any authorization to use the amateur frequencies," the FCC said. In affirming the forfeiture, the Commission determined that Gerritsen's violation of the Communication was "willful and repeated," and that based on the entirety of the record, "we find that neither cancellation nor reduction of the proposed $10,000 forfeiture is warranted."

Amateurs and law officers--some of them also amateur licensees--have expressed extreme displeasure at the slow pace of progress in the Gerritsen case. Reports from Los Angeles area hams indicate that Gerritsen continues to use KG6IRO, although the call sign appears in the FCC's Universal Licensing System as "terminated." Recent letters have implored the ARRL to somehow intervene in the situation.

"Imagine BPL--a million times worse," one radio amateur recently wrote the League. For some time now, repeater owners have been shutting down their machines rather than let an unlicensed user transmit through them.

"When we turn them on," the amateur claimed, "we are continually jammed and harassed--forced to listen to his messages of propaganda." He described switching to various repeaters on his drive home only to hear the station identifying as KG6IRO come on.

"One by one repeaters were turned off, and communications came to a halt," he said. Another amateur asserted that Gerritsen "continues to plague all of the Amateur Radio repeaters in the Southern California."

Before the FCC issued the NAL, agents tracked transmissions to Gerritsen's residence, but he refused a station inspection. "Agents interviewed Gerritsen and he admitted to transmitting on various Amateur radio frequencies as well as various business radio frequencies," the FCC said in its Forfeiture Order.

ARRL has obtained a copy of a handwritten letter Gerritsen wrote while in jail last March on a federal trespassing conviction to the president of one repeater association. In it, Gerritsen suggested that repeater owners should tolerate his commentaries "a few times a day." Gerritsen also claimed he could reach "about 90 repeaters from my home in Bell on a rubber duck and VX-5."

Gerritsen's pending Amateur Radio application is back in the hands of the WTB, which also will decide the fate of his General Mobile Radio Service (GMRS) license. The FCC set aside that grant last fall because of Gerritsen's alleged continued unlicensed operation and deliberate interference. A Hearing Designation Order for Gerritsen is said to be working its way through the FCC bureaucracy.

> Small world, so are yours.

That's right. Anyone can find out quite a bit about them by doing a
Google search. It's odd that when I did the same for yours, nuttin'
came up except one log entry from a Swede during the time you were in

KH2-land.
I'm pretty sure that there's nothing a guy like you could learn from me.

> Work France on 6 lately?

No, "William", I haven't. I did work Iowa, Illinois, Michigan,
Wisconsin and Minnesota among other states on 2m SSB a few evenings
back. I didn't bother to check to see if everyone was operating where
he is permitted to be. I just made sure that I was where I was
permitted to be. Thanks for your interest.

Not at all, your Foghorn Lenhorn-ness. You can type a paragraph about regional variations in Swahili dialect in response to someone's input on the possibilities for the introduction of errors in RTTY messages. It's just that doing so will make you look rather simple-minded.

> >> Tsk. All the morsemen "know" that they do near-perfect copy

> Tsk, you don't "see" much... :-)

Well, I certainly don't see things which aren't there. :-) :-)

> More tsk...you forget that a p-tape TTY message can be read,
> scanned, checked, changed if needed by a new tape, checked
> all over again...usually at a message center or central before
> sent as RTTY.

No, I haven't forgotten any of those things. My experience in such things is much more recent than your own and it is therefore fresher in my memory. All of those things introduce a time lag.

> Or done "off line" at a ham station just like a PC
> e-mail message. The obvious advantage is that the outgoing
> message as well as the incoming reply can be stored easily
> without resorting to a paper form.

Nifty. Those things can be done with help from a PC while using morse.

> Those "noise bursts" affect manual morse reception as well,
> unless the sending rate is so slow that it occurs between dots.

They surely do "affect" morse reception, but you were touting the superiority of RTTY.

> Technical tsk: The noise bursts are primarily of amplitude. They
> do have some wideband frequency content, but the common noise
> experienced at home hobby ham stations is primarily impulse noise
> with more amplitude (think AM) content that have less effect on
> Frequency Shift Keying. (think FM)

Those "home hobby ham stations" use RTTY too, Leonard. I'm quite familiar with the use of FSK. It is still effected by noise and multipath distortion.

> RTTY can be resent easily and quickly without resorting to any
> paper.

So, if I've got this right, we save on paper but spend on equipment. There's a dilemma. If my morse stuff is in memory on a keyer or PC, I can resend it quickly and easily without resorting to any paper.

> At 100 WPM continuous rates that still goes faster than
> common manual morse. Special character coding can include
> FEC (Forward Error Correction) or ECC (Error Correction), the latter
> able to automatically correct singular bit errors and to indicate
> double bit errors.

The fact is that while FEC can be of some help, it is still subject to errors. It isn't a robust system like packet or Sitor/Amtor.

> The claim by many morsemen is that "CW gets through when
> nothing else will..." which is a hoary old myth dating from about
> the 1930s and morsemen bragging that they were better than the

> and not doing real copy. :-)

...or so you've been told. :-)

> Despite all your negative criticism against non-morse communications
> methods, all the other radio services engaged in communications
> have dropped morse on-off keying modes. On-off keying of a carrier
> just doesn't cut it in the communications world of now.

I don't have much in the way of negative criticism for non-morse communication methods, Leonard. Fact is, I use most of 'em. Fact is, on/off keying cuts it quite well in the communications world of now. That hasn't changed just because you aren't proficient in its use.

> >I'm not too concerned with what other radio services do. I'll continue
> >to enjoy the use of morse. I do hope that's all right with you.
>
> Enjoy it all you want. I was never against any morse USE...only
> against the TEST for same for radio operator licenses.

Despite the statement above, your diatribe doesn't read like someone who supports use of morse code.

> If you want to claim extraordinary or even ordinary prowess of
> superhuman (or even ordinary superior human) ability, feel free to
> brag up a storm complete with your usual windy rhetoric.

Did you confuse me with you there for a moment?

> None of that arrogant thundering is any sort of case to retain the

> Tsk. No. Only by the excessive self-righteous self-proclaimed
> superiority (as a 1930s expert radio morseman) and expecting
> all others to emulate your mighty and superior accomplishments.

That's a load of manure, Leonard. That isn't the "only" at all. It is any radio amateur who uses morse and supports continuation of morse testing. I, for one, couldn't care less if you decide to "emulate" me or not.

> What YOU had to do long ago to get your license just does not
> apply to the radio world of now.

What YOU write here isn't the case simply because YOU write it. Radio amateurs worldwide are using morse code daily for real communications. That you don't approve doesn't change that.

> The higher morse rate testing was
> an artificiality of old, a left-over from the past when the only method
> of radio communications was by on-off keying.

There isn't any "higher morse rate" testing.

> >We're not "kiddies", Len and you aren't one of us. I'm not recreating
> >anything. I'm using something which is there.
>
> Tsk. You are acting the usual arrogant bully when expecting all
> to agree with your idea of what constitutes "fun" in ham radio.

You aren't even involved. It would really take an arrogant bully to expect radio amateurs to swallow your view of how amateur radio should be regulated. What do you know of the "fun" of amateur radio?

> All those old, tired, worn-out, dead cliches about "absolutely
> needing to prove manual morse capability to work HF" is just a
> heap of artificial BS left over from earlier times...repeated and
> repeated and repeated by the ARRL for so long that the league
> lost sight (and hearing) of what it originally meant.

Well, there you have it--the opinion of one never involved in amateur radio; one whom it would seem finds that five word per minute exam an insurmountable obstacle to his entry into amateur radio.

> If you and the other mighty morsemen want to preserve and protect
> morsemanship through required manual morse testing, then you

> had best petition the FCC for changing the ARS to the Archaic
> Radiotelegraphy Society.

Is that a DEMAND, Leonard? It's your idea. You petition for the name
change for the service in which you have no part.

> That's what the HF part of U.S. ham
> radio became decades ago.

So you believe that all that goes on in HF amateur radio is the use of
morse? You don't seem to have any idea of what goes on.

> That's what the testing requlations
> required. A name change would make the ARS more meaningful
> to what it was.

Petition your government for redress of your numerous grievances.

> >Don't let it worry you, Leonard. You aren't involved in the slightest.
> >You are to amateur radio what a chainsaw is to a symphony.
>
> Tsk, tsk. Mike Coslo had an innovative use for a chainsaw as
> a shallow trench maker for radial wires. You didn't like that. :-)

I didn't like it? I recall suggesting something easier. I could have
saved him some money if he was bent on sawing slits in his yard. A
circular saw requires only a blade change to a carbide blade. It won't
even care if it hits a rock what that blade.

> I'm sure you look down your nose at all who don't agree what you
> consider is vital to ham radio enjoyment...that's been demonstrated
> in your on-going comments to all who have different interests in here.

Different interests? What are your "interests" in amateur radio, Len?
What do YOU consider "vital" to ham radio enjoyment?

> >Why should any of that concern you? You aren't in.
>
> Don't have to be "in." :-)

You have to be in if you:

1. want to partake in those things "vital to ham radio enjoyment".

2. want to be seen as credible.

> The FCC regulates U.S. civil radio.

You aren't the FCC.

> The laws of the USA don't
> require the FCC commissioners or staff to hold amateur radio
> licenses in order to regulate U.S. amateur radio.

I'd have thought you'd have picked up on this one by now. Those people
are paid to regulate amateur radio. They are PROFESSIONALS.

> Despite your mighty brass-section trumpeting about "needing to
> be 'in' in order to 'direct things' in ham radio," YOU are NOT a
> radio regulator.

...and have never claimed to be a regulator.

> YOU are nothing but a mighty wind section
> demanding all go along with your ideas, conceptions, and general
> wild hairs of what 'should be done' and 'who is allowed to regulate
> it.' :-)

That's be another incorrect response. I'm a participant. Participants
are more important than regulators. With no participants, there'd be
nothing to regulate.

> Not an orchestra by any means, just a bad brass band, out of
> step with the times yet demanding that all keep the old things.

You're an old thing and I'm not demanding to keep you.

> >You aren't getting in.
>
> Are you going to STOP me?!? Oh, my. Tsk.

Why, no. You do that. Consider yourself stopped by inertia.

> >The FCC doesn't seem to have taken any action except to reduce the
> >HF morse testing speed to 5 wpm. Why do you think that is?
>
> They seem to be overwhelmed by the olde-fahrt olde-tymer
> morsemen who are blindly believing in the morse religion and
> have filled the ECFS' 18 petition commentary with same. :-)

Sure, Len. When will the scales fall from their eyes? :-)

> >Is he here too? I'll bet he could give you some valueable insight as to
> >how to better use your venerable R-70.
>
> That general purpose receiver is still working as good as it did
> when I bought it and when I tested it to its factory specifications
> shortly thereafter. Icom has a good product there.

I'm sure it works as well as designed. Did you read up on phase noise
yet?

> Tsk. Two NCTAs in here having the same Icom receiver (both still
> working) seems to be a sore point with you. Poor baby.

If you own an R-70 and are happy with it, bully for you. It is fine for
your sort of casual listening.

> Go play
> with your Orion, why don't you? That ready-made will bring you up
> to the "state of the art!" :-)

It surely does, Leonard. Its receiver beats the specs on the $11,000
Icom IC-7800. I'm sure that my tired old Orion couldn't begin to
compete with the likes of an R-70. Now THAT'S state of the art!

> >> You will go right ahead with your "not licensed" schtick...
> >
> >Yes, I will. It happens to be true.
>
> No, it is NOT "true."

Yes, it is an undeniable truth that you have no amateur radio license.

> You don't regulate U.S. amateur radio.

That doesn't give you an amateur radio license.

> All
> you are is an olde-tymer snarling about all having to do as you did
> before they are allowed to talk about it, discuss it, or anything
> else.

"All" can't do that. You have no license but you've talked, discussed,
demeaned, insulted and belittled.

> Tsk. Elementary civics teaches us that U.S. federal laws are
> open for dicsussion by all citizens according to the First Amendment
> of the U.S. Constitution. You seek to BAR any citizen from talking
> about regulations of radio hobby licensing. You aren't any member of
> any bar association, so don't try to throw your weight around where
> you are weightless.

It has been pointed out on numerous occasions that no one has prevented
you from spilling your guts. But you just can't force anyone to take
your stuff seriously.

> >You aren't in. You have no plans to get in.
>
> Tsk. I don't tell all in here. :-)

We can only go by what you've told us. If you do have plans to get in,
then you've lied. It doesn't matter. As the President responded to
John Kerry: "A litany of complaints is not a plan".

> Neither am I required to tell YOU on YOUR demand about anything.

Excuse me? Which demand was that?

> Heh heh heh. Ever the demanding arrogance of someone who likes
> to push folks around.

You attempt to push others around quite frequently. It's tough being
arrogant about amateur radio when you aren't actually a licensed ham
though.

> First Amendment. Refresh your memory with what it means.

It says that my right to free speech is equal to your own. It makes no requirement for me to accept your views or to refrain from giving you the raspberries.

> Feel free to review Title 47 C.F.R. Part 97 and show us all where
> ONLY already-licensed radio amateurs can talk or discuss the
> amateur radio regulations. Show your work.

Is that a DEMAND?

> >You have no experience in amateur radio.
>
> I have MUCH experience in RADIO.

You misread. I wrote that you have no experience in *amateur* radio.

> It's true that I have no amateur
> radio license.

It certainly is.

> It's also true that I have a commercial radio operator
> license and had several other radio licenses.

Irrelevant.

> See Part 97 again and tell us all the sub-part that allows ONLY
> already-licensed radio amateurs to talk about amateur radio.

You've "talked". I find you incredibly incredible.

> >You have no stake in amateur radio.
>
> Tsk. There you go again DEMANDING a "stake!"

I didn't see a demand, Leonard. Do you see a demand in my six word statement?

> Be advised that von Helsing may give YOU a stake.
>
> Wooden. [I would suggest wormwood as fitting...]

I'll take it. If he has a few more, I can use 'em during Field Day.

> >It doesn't seem to matter if people take pokes at you or razz you or if
> >they are civil to you.
>
> Heh heh heh heh. I'm a long-time veteran of computer-modem
> communications with a survivor's thick virtual skin. :-)

Virtual skin? Is that like those "message knuckles" you wrote about some time back?

> But, very very FEW PCTAs in here have been civil to me.

Gee...I wonder why that would be.

> Begin
> with Jim Kehler, continue through assorted types who couldn't
> take it in here and left, on through a couple of now-deceased
> PCTAs who weren't able to continue for obvious reasons.

Well, you seem to have it on points over those who tired of your
nonsense and left, and over those whose respiration stopped. I'm
betting that I can outlast you.

> ALL of them insisted and insisted and insisted that the morse
> code test "must" stay...as "tradition," as a number of invalid
> reasons, but (unvoiced) was the real reason, that of making all
> newcomers jump through the same hoops they had to jump
> through.

You probably lose some folks as soon as you start your "jump through the
same hoops" schpiel. You aren't yet a newcomer and you'll not be able
to jump through my hoops. They no longer exist.

> >You continue to insult and demean.
>
> Tsk. I return fire with fire. :-)

Naw, fess up. You more often fire and wait for the return. Say, didn't
you claim that you didn't know much about this battle stuff?

> You don't like it because you imperiously demand that all the
> "firing" be yours against others. Tsk.

I'm sure that it seems that way to a guy with an obvious inferiority
complex; a guy who sees demands in ordinary statements; a guy who views
the comments of those who don't agree with him as "arrogant",
"bullying", "imperious".

> >You deserve everything you get here, poor old piranha.
>
> Tsk. Someone wrote that all were "civil TO me?" :-)

Who was that?

> Hello? Can you understand 'hypocrisy?' :-)

Yes, I've been reading your stuff for years.

> >You can't possibly endure the test I had to take.
>
> BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH!!!!!!!

Did you find that funny or did the Metamucil kick in?

> >The test I had to take isn't being given any longer.
>
> Hehehehehehehehehehehehehehehehehehehehehehehehehehheeehhheeeee.
>
> >You can't even take the same written test.
>

> No need, is there? Tsk, tsk.

Need matters not. You brayed about insistence that all must do as I
have done. Fact is, it can't be done. Tsk, tsk. Poor baby.

> >You're an old fart, Len and you're on the periphery of amateur radio.
>
> I did have some bean soup a couple days ago. Black bean.
> Very good with a salad and a sandwich. No flatulence, though.

You underestimate yourself.

> I come in here and sense a great deal of flatulence from you
> olde-tymers boasting that NOBODY "could endure the kind of
> test they endured."

That wasn't a boast, Leonard. Nobody wrote "endure". You made a false
statement. Now you can eat your own words with your bean soup.

> Funny as hell, this newsgroup. :-)

It just seems that way if you don't know what's going on.

> >I suppose you'll stay there.
>
> Maybe I will. Maybe I won't.

Did you hear that noise? That was me giving a rat's patoot.

> Either way, YOU have NO CONTROL over it!

Sure I do, Len. Watch this:

Leonard Anderson, you'll stay out of amateur radio.

Now, watch it come to pass.

Well, there it is, the "authoritative voice" of U.S. ham radio. :-)

There will be no consensus until the league says there's consensus!

:-)

It is indeed actually in part 97. It must be intended for amateurs and the
content must be amateur related material, ie things like rule changes or
effect of BPL but not other material such as religious material, general
news, etc.

Dee D. Flint, N8UZE

Darn it! There goes your chance for a t-shirt, Dee. Better get one of
Glenn's "offerings" before they are all gone! I hear they are selling
like....well, cheap imitations of the ARRL t-shirts.

Probably a waste of time, Dave.

I quoted and requoted His Putziness's own words that he claimed he didn't say despite being given headers, dates, message addresses, etc.

"Double standards", etc, only count if he is trying to disparge one of us.

Leonard H Anderson and Brian P. Burke may lie, deceive, misrepresent and otherwise act a fool at will, and that's "OK"...To them, anyway. They think they are "cute" or somehow being "free thinkers" or "independents".

I just think they are irresponsible, arrogant liars, myself.

Lord knows they've been caught at it often enough. Their deceptions (or attempts at it, anyway) and misrepresentations are archived in the volumes by now.

Wow, did you think of that response all by yourself???

Your parents must be so proud of you, I mean, after the doctors slapped your mother for giving birth to you, and they had to tie sausages around your neck to get the dog to play with you, you've managed to master the task of hiding behind a keyboard, typing a message, and playing with yourself at the same time!!

Well done indeed!

Such an electron pusher as yourself shouldn't require any time at all to solve
such a problem.
>
>>Design a heterodyne scheme to cover the 80, 40, and 20 meter ham bands
>
> That was done well before 1990 by others. :-)

But not by you. And not using a 1400 kHz IF
>
> Tsk. You should have read all about the past. Try Collins Radio circa
> the end of the 1940s for some examples. You need the TMs for their
> government designs?
>
Don't need any of that, Len. I solved the problem. Can you? I think not.

>>It seems that you would rather have all of us amateurs simply purchase
>>whatever the manufacturers put out, without question or comments.
>
> Nooooo...NOT what "I seem to be doing." :-)

OK. It's *exactly* what you're doing.

> I called your kluge pile a KLUGE. My opinion.

"Hnarf!"

> I didn't try to misdirect
> into a discussion of ready-builts.

Yes, you did.

> The picture of your transceiver (the
> collection of tube-holding chassis) spoke for itself.

You mean the modular construction?

>>Not at all. The Yankee word for it is "frugal".
>
> CHEAP is still cheap. You can dress it up in fine words but it is
> still CHEAP.

"Cheap" means poorly made. Doesn't apply to the Type 7.

>>> Not me. "Kluge' is a familiar term in aerospace. Too bad you never
>>> worked in that...
>>
>>Why would I want to?
>
> Tsk. I doubt anyone in the aerospace industry really cares what you
> want to do personally, but that's just an off-the-cuff opinion. :-)

You haven't answered the question.
>
> Exciting work in aerospace in the USA in the last half century,
> really advancing the state of all electronics' art in most disciplines,

> making high-performance aircraft and spacecraft that landed on the
> moon, plus many other achievements.

The last moon landing was 32 years ago, Len. Why are you stuck in the past?

>>How is that imposing my standard of beauty on others? It's music to *my*
>>ears.
>
> Whatever floats your auditory boat. :-)

Too much hip-hop in your headphones, Len ;-)

>>Your experience is limited and flawed, then.
>
> It always is according to the PCTA extras. :-) Hi hi.

A fact is a fact.
>
>>Nothing worth showing, huh? That means you're all talk and no action, Len.
>>All show and no go. Vaporware.
>
> Tsk, tsk. It's been shown but not as a single-photo home page on
> AOL. :-)
>
Not in any issue of "ham radio". Not anywhere easily referenced.

I think you don't have anything to show. Nor can you solve the problem posed.
So it's all bafflegab and diversion.

>>Your response is as expected, Len. You don't have any homebrew HF radio
>>projects to show us. Not receivers, transmitters or transceivers anyway.
>
> Heh heh heh.

You don't, then.
>
>>You'd be at a loss to actually design and build one yourself, in your home
>>workshop, on your own time, with only your own resources. You talk a lot
>>about articles written by others and technical details, but when it comes to
>>designing and building a complete radio.......
>
> Tsk. Still incorrect, Jimmie.

Then show us what you've actually done, on your own time and only using your
own resources.

I predict you won't. Or can't.

>>Nothing worth showing.
>
> Tsk. Still snarly and angry about your collection of un-enclosed chassis
> (using tubes) built in the 1990s being called a KLUGE?

Diversion and bafflegab.
>
>>Not "put out" at all. You behaved exactly as expected and predicted.
>
> Oooooo..."as expected" and "as predicted!" :-)
>
> "Predicted" to whom? :-)

To the newsgroup.

>>There's a lot more to building a rig like the Type 7 than "chassis punching"
>>and remembering circuits.
>
> Can't see that. You haven't documented any of that.

Solve the heterodyne problem. That's the first step. You can't do it, can you?
>
> All us readers saw was a single photo of a bunch of tube-holding un-
> enclosed chassis.

More than a few readers have heard it on the air. Reports are uniformly
excellent. That's what really counts, btw - what the signal sounds like.
>
> You didn't show anything else. No show, no blow...by your "rules." :-)

You don't know where to look. Remember that AOL allows up to 7 home pages on a
single account.

At least one receiver of mine (Southgate Type 4, built over 30 years ago) is on
another web page.

It's still much more than *you* have shown.

>>It's very clear that you are more interested in the superficial (appearance,
>>parts used, cost) rather than the significant (performance, reliability,
>>usable features, unique methods) of homebrew radio equipment.
>
> "Very clear?" :-)

Abundantly clear. You're a spectator, so appearances are all you have to go on.
>
> Tsk. I didn't see any MTBF figures or environmental test reports
> on the Famous Type 7 home page on AOL. :-)

You won't - your approval isn't needed.
>
>>Nope. But you seem to have one. Somebody has a website that shows a homebrew
>>ham station, and you have to attack its appearance and the technology used,
>>even though you know little or nothing about it.
>
> "Attack?" :-)

Yes.

>>Meanwhile, readers may note that you talk of "homebrewing" and "technical
>>subjects", but have nothing to show that isn't work-related except perhaps
>>having purchased a ready-built receiver 20+ years ago. For "CASH"...
>
> Tsk. Someone else having money gets you UPSET does it?

Nope. Someone actually homebrewing without your approval gets you upset,
though.

>>It may also be noted that while you talk about only being against the Morse
>>Code test (not use), and being in favor of hams doing technical stuff, that
>>talk rapidly turns negative and critical when someone actually does such
>>things.
>
> Awwwwww....

It's true!
>
>>You seem to think that "the military" is the only way to be of service to
>>our country. You're wrong about that.
>
> Tsk. You are getting repetitious with your "you're wrong about that."

Your mistakes and errors are reptitious, Len..

>>*you*. Len. You're not a ham, have never been one, have no apparent
>>intentions
>>to become one despite that "out of the box" claim of almost 5 years ago.
>
> Tsk. You're still going on and on with that schtick, aintcha? :-)

Gets you upset, does it?

> Did you pledge your allegiance to amateur radio? Take your vows
> as a good little morseman, never to sully your soul with an evil
> microphone used for speech?

Naw. I've used a wide variety of modes. SSB, AM and FM voice modes, FSK RTTY,
SSTV, etc. as a ham.

>>Yet you post here probably more than anyone else, clutter the ECFS with long
>>repetitious commentary on a single small facet of amateur radio testing, and
>>argue even with those who agree with you.
>
> Tsk. Up till last night, I'd made ONE post in five days. I guess that's
> "posting more than anyone else!" :-)

Look at the past month and it's a different story...

> I "clutter the ECFS" [at the FCC website] with "long repetitious
>commentary
> on a single small facet of amateur radio testing?"

Yes.

> Tsk. Mikey Powell
> should ban me for "overcrowding" the gullfoss server? HAR! Hi hi. :-)

I'm still waiting for you to call him "Mikey" to his face. You sure manage to bow, scrape and tug the forelock in your comments to the Commission. Easy to cut and paste, isn't it?

> There are no less than 18 petitions on the ECFS towards a proposed
> NPRM on amateur radio restructuring. Nearly all of those 18 involve
> the manual morse code test. I've commented on nearly all of the 18.

So?

>>Very illogical.
>
> Yes, isn't it? Jimmie got all put out by not having his handiwork loved
> admired, praised, etc. and then made a bunch of factual ERRORS in
> closing. Tsk.

The only errors are yours, Len.

> A kluge is a kluge. A picture of one speaks for itself.

Is that why you don;t have any pictures of *your* homebrew projects on the web, Len?

It sure seems to be.

You are simply amazing. Thank you for reposting that little gem.

Yepper, "Morse Code testing keeps out the riff-raff."

So I guess if you're Morse Code tested in front of a mere VE, then
it's not as effective or something. Hi!

I wonder if K1MAN was morse code tested in front of a steely-eyed FCC
field engineer who wasn't going to let any crap happen on his watch,
or in front of a cream-puff Volunteer Examiner who brought the coffee
and donuts?

> I'm all for reviving that old PCTA battle-cry, "Most Certainly!"

Quitecertainly.

> Sheesh.
>
> Dave K8MN

Sheesh, indeed.

These are the number of unexpired FCC ARS
licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Technician - 205,394
Technician Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750

Total Tech/TechPlus - 334,254

Total all classes - 674,792

As of October 15, 2004:

Novice - 30,245 (decrease of 19,084)
Technician - 264,345 (increase of 58,951)
Technician Plus - 56,144 (decrease of 72,716)
General - 138,792 (increase of 26,115)
Advanced - 78,631 (decrease of 21,151)
Extra - 105,896 (increase of 27,146)

Total Tech/TechPlus - 320,489 (decrease of 13,765)

Total all classes - 674,053 (decrease of 739)

Hi! I recall another "state of the art" Extra trying to finish up his Worked All States. I wish them all the very best of luck in extending the radio arts.

I wonder what the history of ARRL's WAS program is? Were the first WAS certificates for 48 states or fewer?

Mike,

Why do you consider this a treaty matter today? While the current
treaty may not yet have gone through Senate approval, surely aren't
suggesting (or maybe you are) that anyone here (USA) or elsewhere
considers the prior treaty still in effect.

Cheers,
Bill K2UNK

I believe I've pointed that out each time you or Len has used the
"World's Greatest DXer" tag as a reference to me. Yet both of you
continue to make the same mistake over and over. Is it because neither
of you is capable of learning or because it is an attempt to take a
cheap shot at me?
I don't believe either of you is very well known in DXing.

I'm sorry. That is incorrect. "William", "Brian" or "liar" would have
been an acceptable response. Thanks for playing.

My accusations? The accusation where I corrected your use of the term
"World's Greatest DXer"? The accusation where I've told you that I'm
not responsible for where foreign hams operate, only for where I
operate? Maybe it was the accusation that because you continue to tell
deliberate untruths, that you're a liar.

> > > Work France on 6 lately?

Ah, but without my checking, isn't it quite possible that some scofflaw
Novice sneaked onto the 2m band for a quick QSO? Isn't your position
that I should be concerned enough to check these things?

> Work any
> "out-of-the-box WN-prefix Extras?").

I have no idea.

> And that is Quitethetruth!

Of course no threat was made here, Mike.

I related the happenings of another situation wherein a person had been harrassing an Internet group (not a USENET group, but similar...). The person, much like Lennie, made it a point of trying to be the King Of The Hill, used copious profanities, and just otherwise was a PITA.

The news story related the efforts of the participants to get this creep off thier group, but even after he'd been booted from a couple different ISP's, he'd show up through a remailer or other anonymous posting.

Unfortunately the participants took it upon themselves to strike back in the manner that I related herein.

Of course Brainless and Sir Scummy said I was "threatening" them and "terrorizing" thier spouses.

Brain will not be able to quote a post wherein I or any other person threatened him, his family, Lennie or his family in any way shape or form because it didn't happen.

Brain flatters himself that I or any other person who even remotely disdains the idea of imprisonment would risk said imprisonment over him.

He truly is one egocentric creep.

Who knows? "William" doesn't answer questions directed at him, yet demands that
others do so.

> Doesn't that invoke good Mr. Godwin?

I don't think so. Being compared to Oskar Schindler is the exact opposite.

Perhaps "William" will explain what the word means in that context.

Agreed.

> The LLD (Doctor of Laws) is always problematic. An LLD
> suggests many ethical character problems and a mind generally not
> interested in real-world science or engineering.

Not always. I think your brush is too broad. There are LLDs and there
are LLDs: EE+LLD types are very different animals from the usual
run-of-the-mill attorneys and they're out there in some volume. I know
several of the general breed myself. Two are chem engs and another is
a mech eng who work in the complex field of patent law and are very
sharp technically. Another is an ME+LLD accident reconstruction expert
I worked with one case he had. One more is an EE+MBA+LLD technology
consultant to venture capital investors. I got into a tussle over an
injury insurance claim with an LLD+MD. There's a tough one . . !
Technically sharp lawyers are out there but are seldom found working
for neighborhood law firms.

> An experienced FCC field
> engineer who understands both the technology of radio and the politics of

> it to Chairman.

Amen. At least two, maybe three of the commisioners should come from
the pool of experienced communications lawyers. There are a bunch of
those specialists around and available and many of 'em are hams. The
ARRL has a whole network of 'em on tap per Chris Imlay. We even have
our very own RRAP resident comms lawyer, Phil Kane K2ASP, EE+LLD,
former head of the San Francisco FCC Field Office.

> For sure, they wouldn't stand for today's BPL stupidity and

Not an implied threat, Lennie.

Fact of law in the State of California.

> Want "investigations?" Investigate your own blathering outpourings
> of implied threats in here. Plenty enough for some shrinks to make
> a recycled paper of...

No "implied threats", Lennie.

You have demonstrated chronic obsessive-compulsive behaviour compounded by repeated lying and willful deception.

> Feel free to send a letter to Tom Ridge, if you want.

Why? Does he have licensure as an LMHSW in California?

> Or the FBI. Or the CIA. Or the DIA. Or even the IBEW.
>
> [try not to use crayon again...they didn't like that the last time...]

Now compounded by illusions and fantasy.

Your above statement suggests that a factual event occcured.

You are now obligated to prove that assertion of have yet ANOTHER LennieLie piled on the stack that has gotten you flagged as a pathological liar.

> Tsk. Get some REAL medical help, nursie...your meds just
> aren't working...too many side effects visible to all readers here.

What "side effects", Lennie?

What level of healthcare licensure do you hold that allows you to make such diagnosis and suggestions?

Or would you like to cut to the chace and admit that you are, once again, manifesting a lie in order to cover your own tracks?

Putz.

k1man has a broadcast ego that is
almost as big as his bulbous buttocks......

I hope Hollingsworth shows up on his doorstep with
federal marshals in tow and confiscates every goddamed
piece of decrepid radio junk he has in his broadcast station.

Put the putz-with-a-Moe-Howard-haircut from Maine
off the air once and for all. If RH does this alone, it will
drive the Bozo of Belgrade Lakes totally insane.
Perhaps even to the point where he'll need to be put
in a freakin rubber room in the local mental health clinic.
Then he can "broadcast" to himself while he bounces off
the padded walls in a straight jacket.

Yer not gonna believe this, but I paid for my K2 and options by selling off parts from the inventory. Stuff that was once inexpensive now commands high prices. Some via eBay, some via hamfests, some private sales. Etc. One transformer/choke combo that I got for almost nothing is now in Norway or Sweden (I forget which) in a restored pre-WW2 Harvey Wells transmitter.

I keep books on sales and expenses (just two more categories in Quicken) and so I know what I've spent on amateur radio, and what I've gotten from sales.

>I see your point, Len. I doubt that there are many in amateur radio who
>care what you want to do "personally".

This brings up something I've been wondering about....

Len describes himself as "retired during regular hours" which I take to mean
that he may still do some work on the side. He's 72 and still working part
time, after a "career in radio electronics". Probably retired at 65, if
postings are any indication. Lives in a nice little house that he is fortunate
to own because he bought it 40+ years ago.

Dave is also retired, if my information is correct, after a career of service
to our country. He's also much younger than Len. Lives in a nice house that is
also a great location for ham radio. Happens to be in WVA but could be
anywhere. Dave could probably live in SoCal if he so desired, but he doesn't.

So I am wondering, looking at their relative retirements, why I should be
interested in following Len's example rather than Dave's.

Not at all.

>I didn't see any statement about someone else having money, Leonard. We
>have an indication that you had, at one time, enough surplus "CASH" to
>purchase an Icom R-70.

Brings up another subject...

If I go out and buy an Orion or an IC-7800 "for CASH", will that somehow change Len's behavior here?

>> A kluge is a kluge. A picture of one speaks for itself.

>Len, you are a rude churl. If we had a photo of you, perhaps it could
>speak for itself.
>
Dave, why do you say that about Len? He's not describing the Southgate Type 7, because it doesn't fit his definition of a "kluge".

What's most noteworthy is that while Len sits in judgement of what others do, he hasn't presented any homebrew radio projects of his own. You'd think a retired guy with a home shop and all his claimed experience, know-how and critical addy-tood would have built *something*.

But we see nothing at all from Len. Heck, he can't even solve a simple heterodyne design problem.

You've heard my homebrew rigs, Dave - did they sound any different from "state of the art" rigs?

> Novice sneaked onto the 2m band for a quick QSO?

Scofflaw Novices!

Isn't your position
> that I should be concerned enough to check these things?

If one had an obvious Novice callsign, such as "WNx...," you might
have to wonder. Often people volunteer what their amateur "status"
is, such as "I'm a Novice." That is another decent clue. Or, you
might be told that they are operating out of band.

The real problem occurs when you know they are out of band, but just
keep right on collecting those greenstamps.

> > Work any
> > "out-of-the-box WN-prefix Extras?").

>Not at all, your Foghorn Lenhorn-ness. You can type a paragraph about
>regional variations in Swahili dialect in response to someone's input on
>the possibilities for the introduction of errors in RTTY messages. It's
>just that doing so will make you look rather simple-minded.

Tsk. Try to stay focussed. I wasn't "introducing Swahili dialect"
into anything. :-)

Can a morse radiotelegraph circuit introduce error or is it supposedly
free from error of any kind?

Answer that yes and you yourself are very simple-minded. Tsk.

>Well, I certainly don't see things which aren't there. :-) :-)

Tsk. You are seeing things not there continually.

I made no remark about "introducing Swahili dialects." You did.

>No, I haven't forgotten any of those things. My experience in such
>things is much more recent than your own and it is therefore fresher in
>my memory. All of those things introduce a time lag.

Tsk. Are you saying that TTY "introduces a time lag" now?

Are you also saying manual morse is instantaneous?

More tsk. You should be out educating all the rest of the
radio services on the supposed efficacy of morse code and
manual on-off carrier keying.

All the rest of those radio services that once used morse have
dropped it for communications purposes.

Then there are a number of radio services which never bothered
with any morse code when they began.

But, you will then "argue" that "this is amateur radio" as if it was
a haven, shrine, or religious temple for morse code and that all
amateurs MUST test for it...won't you? :-)

>They surely do "affect" morse reception, but you were touting the
>superiority of RTTY.

Incorrect. I was simply pointing out that morse code telegraphy
is the SLOWEST of all modes available to U.S. radio amateurs.

But, you cannot keep on the subject and must always attack
the persons of those who disagree with you. Tsk.

>Those "home hobby ham stations" use RTTY too, Leonard.

You don't, do you? :-)

>I'm quite
>familiar with the use of FSK. It is still effected by noise and
>multipath distortion.

...and on-off keyed carriers are NOT so affected? :-)

Of course they are. You are too simple-minded to admit to that.

>So, if I've got this right, we save on paper but spend on equipment.
>There's a dilemma. If my morse stuff is in memory on a keyer or PC, I
>can resend it quickly and easily without resorting to any paper.

Tsk. "Spend on equipment?" What are you communicating with
on this newsgroup? Morse code into your telephone line? :-)

Tsk. So simple-minded you walked into that very visible trap
like a blind man trying to bluff.

>The fact is that while FEC can be of some help, it is still subject to
>errors. It isn't a robust system like packet or Sitor/Amtor.

...and, to you, of course, manual morse code is without error. :-)

Lacking a few received characters in morse? Why, just fill in the
blanks. Who will know? :-)

>I don't have much in the way of negative criticism for non-morse
>communication methods, Leonard. Fact is, I use most of 'em.

Of course you do...oh, yes, everything from facsimile to slow-
scan TV. :-)

>Fact is,
>on/off keying cuts it quite well in the communications world of now.

By whom? Third- and fourth-world nations who don't have any
capital monies to invest? :-)

Face the facts. The rest of the radio world does NOT use morse
code for communications.

>That hasn't changed just because you aren't proficient in its use.

TRY to stay focussed on the subject instead of (once more)
launching into personalities.

TRY to understand that the rest of the radio communications
world does NOT use morse code for communications.

All you can do is to be very trying...

>Despite the statement above, your diatribe doesn't read like someone who
>supports use of morse code.

Tsk. You ARE seeing things that aren't there...

>Did you confuse me with you there for a moment?

Never happen. I know me. I know you. You do NOT know me.

>"Arrogant thundering" = any disagreement with your views.

You can't stay focussed on the subject. All you can do is act
the thunder mug on anything I post. :-)

>Past tense?

I'm using the Internet to send these messages. Whether that uses
radio or other means is not an issue. Except by your misdirection
and seeing things that aren't there.

>That's a load of manure, Leonard. That isn't the "only" at all. It is
>any radio amateur who uses morse and supports continuation of morse
>testing. I, for one, couldn't care less if you decide to "emulate" me
>or not.

Irrelevant.

NO one cares to "emulate" you. :-)

>What YOU write here isn't the case simply because YOU write it. Radio
>amateurs worldwide are using morse code daily for real communications.
>That you don't approve doesn't change that.

Again, irrelevant.

At issue is the morse code TEST, not whether or not "Dave" or his ilk
"use morse."

Note that USE has no real relation to the MORSE TEST.

Or do you spend all your amateur radio time "taking tests?" :-)

>There isn't any "higher morse rate" testing.

Isn't that awful...hi hi.

>You aren't even involved.

Tsk...with role models like the archtypical PCTA extra, who would
want to be "involved" in amateur radio? :-)

>It would really take an arrogant bully to
>expect radio amateurs to swallow your view of how amateur radio should
>be regulated.

Tsk. I feel that the USA should have the FCC regulate amateur radio,
all according to the Communications Act of 1934 plus the Congressional
law of 1996.

Who do you feel should "regulate" U.S. amateur radio?

A bunch of arrogant bullies trying to make newcomers swallow their
bilge about doing as they had to do?

>What do you know of the "fun" of amateur radio?

Tsk. What do you know of "fun" in ANYTHING? :-)

>Well, there you have it--the opinion of one never involved in amateur
>radio; one whom it would seem finds that five word per minute exam an
>insurmountable obstacle to his entry into amateur radio.

Tsk. Still seeing things that aren't there.

Still tossing out personal pejoratives instead of discussing the subjects.

THAT is the "fun" that appears in this amateur radio newsgroup. :-)

>So you believe that all that goes on in HF amateur radio is the use of
>morse? You don't seem to have any idea of what goes on.

Tsk. You don't have any idea of how to discuss things civilly.

>Petition your government for redress of your numerous grievances.

I have. :-)

You don't like that. TS for you. :-)

>Different interests? What are your "interests" in amateur radio, Len?
>What do YOU consider "vital" to ham radio enjoyment?

Freedom from the oppression of olde-tyme hammes insistent on
ruling over all others would be a good start... :-)

Oh, tsk. That would eliminate you, wouldn't it? Can't have that.

You have to stay here and effect ethnic cleansing of U.S. amateur
radio. All must think and act in the "officially approved" manner. :-)

Which has a strange similarity to your own interests, narrow as
those might be...

>You have to be in if you:
>
>1. want to partake in those things "vital to ham radio enjoyment".

This was NOT a discussion about "partaking" in anything.

Then, again, this isn't a discussion at all...just "Dave" trying to
push others around. Again.

>2. want to be seen as credible.

Lets "Dave" out...he is INcredible. :-)

>> The FCC regulates U.S. civil radio.
>
>You aren't the FCC.

NEITHER ARE YOU. :-)

>I'd have thought you'd have picked up on this one by now. Those people
>are paid to regulate amateur radio. They are PROFESSIONALS.

YOU are not a professional regulator...just an amateur one.

YOU may be admitted to A bar, but never a bar association.

>That's be another incorrect response. I'm a participant.

You are a precipitate. The dried leftovers following evaporation.

>Participants are more important than regulators.

Tell that to Congress. Have them change the Communications Act
of 1934. :-)

>With no participants, there'd be nothing to regulate.

Keep at it with your warmth and charm in newsgroups and that will
be a foregone conclusion. :-)

>You're an old thing and I'm not demanding to keep you.

Tsk. Again with the personal pejoratives. :-)

So...you are "young?" :-)

>> Are you going to STOP me?!? Oh, my. Tsk.
>
>Why, no. You do that. Consider yourself stopped by inertia.

Tsk. You, repeat YOU, keep trying to stop me.

Your technique (word used instead of other nasty ones) does NOT
work!

Sunnuvagun!

>It has been pointed out on numerous occasions that no one has prevented
>you from spilling your guts.

Feel free to do your own seppuku. Nobody is stopping you... :-)

>But you just can't force anyone to take
>your stuff seriously.

You aren't "anyone." You are the arrogant bully of the newsgroup,
even better than the gunnery nurse. :-)

Wouldn't dream of trying to make YOU seriously "take" anything.

That's what you try to do to others. :-)

>You attempt to push others around quite frequently.

Tsk. You gods of radio seem to think you are inviolate. Nobody is
supposed to say ANYTHING nasty to you dieties. :-)

>It's tough being
>arrogant about amateur radio when you aren't actually a licensed ham
>though.

It's much much more arrogant when you ARE a licensed ham (either
FCC or FDA) and you keep on trying to push folks around, strip
citizens of their Rights such as the First Amendment. Tsk.

>> First Amendment. Refresh your memory with what it means.
>
>It says that my right to free speech is equal to your own.

Tsk. It does NOT say your right is in any way stronger than mine.

Yet, throughout in here, that's what you keep on claiming.

>It makes no
>requirement for me to accept your views or to refrain from giving you
>the raspberries.

YOU would NOT come even close to accepting a contrary idea
to what you hold... :-)

>You misread. I wrote that you have no experience in *amateur* radio.

According to "Dave," one can't have ANY "interest in radio" without
getting an amateur radio license! :-)

Wasn't any qualifier to the word "radio" when "Dave" wrote it. :-)

>> Heh heh heh heh. I'm a long-time veteran of computer-modem
>> communications with a survivor's thick virtual skin. :-)
>
>Virtual skin? Is that like those "message knuckles" you wrote about
>some time back?

LIke I've seen lots of computer-modem bullies in the last 20 years.
Most of those are gone. I'm still here... :-)

>Well, you seem to have it on points over those who tired of your
>nonsense and left, and over those whose respiration stopped. I'm
>betting that I can outlast you.

Anything is possible... :-)

You are a god of radio. One of the Four Morsemen of this
Apocalypse.

>You probably lose some folks as soon as you start your "jump through the
>same hoops" schpiel.

Poor baby. Still can't get used to what others say of the morse
test, can you? :-)

>You aren't yet a newcomer and you'll not be able
>to jump through my hoops. They no longer exist.

Incorrect.

But, it is impossible to get you to admit to an error.

You are a god of radio and therefore inviolate.

>I'm sure that it seems that way to a guy with an obvious inferiority
>complex; a guy who sees demands in ordinary statements; a guy who views
>the comments of those who don't agree with him as "arrogant",
>"bullying", "imperious".

Now, now, don't get upset...the mirror you are looking into when
writing that has YOUR reflection! :-)

>Need matters not. You brayed about insistence that all must do as I
>have done. Fact is, it can't be done. Tsk, tsk. Poor baby.

Sadness is. When "Dave" was made, the mould was broken...

[or was that "mold?" Sometimes its hard to tell the difference...]

>Now, watch it come to pass.

Tsk. "Dave" keeps on with the personal pejoratives and gets all
flustered when they aren't received well.

If you threw passes properly then receivers might catch them.
Remember which way your goalposts are on the field...you keep
forgetting and that's not good. You should practice punting.
Your arm must be so sore from throwing all that stuff you throw....

Try to play with your Orion some more. Seriously, not trivially.
Can't have a god of radio use equipment trivially. :-)

If you go away from your radio toys into the newsgroup, then lots
of replies to you will "just write themselves!" :-)

LenAnderson@ieee.org

> consider themselves bound by the treaty anyhow.

I wonder how long it was after the WARC that created the
"WARC" bands that the FCC changed the USA rules to allow
use of those bands. Did US rules change before Senate ratification?
Hey Jim (N2EY), got your history of the FCC and ham rules
handy?

> But this will still probably take longer than any of us that made
> thoughtful predictions thought. 8^)

So it seems.

Cheers,
Bill K2UNK

That's right, you introduced equally unrelated. Then again, you don't
have to address my comments ;-)

> Can a morse radiotelegraph circuit introduce error or is it supposedly
> free from error of any kind?

It isn't necessarily free of error, Len. Then again, I've not claimed
that it is.

> >Well, I certainly don't see things which aren't there. :-) :-)
>
> Tsk. You are seeing things not there continually.

Which things are not there continually?

> I made no remark about "introducing Swahili dialects." You did.

Your response was equally irrelevant.

> >No, I haven't forgotten any of those things. My experience in such
> >things is much more recent than your own and it is therefore fresher in
> >my memory. All of those things introduce a time lag.
>
> Tsk. Are you saying that TTY "introduces a time lag" now?

We'll never know. You snip the relevant portions.

> Are you also saying manual morse is instantaneous?

I don't think so.

> More tsk. You should be out educating all the rest of the
> radio services on the supposed efficacy of morse code and
> manual on-off carrier keying.

I have no interest in educating the rest of the radio world in anything.
You may, if you like.

> All the rest of those radio services that once used morse have
> dropped it for communications purposes.

So? What is that supposed to mean for the service which uses it
commonly and regularly?

> Then there are a number of radio services which never bothered
> with any morse code when they began.

Did you have a point?

> But, you will then "argue" that "this is amateur radio" as if it was
> a haven, shrine, or religious temple for morse code and that all
> amateurs MUST test for it...won't you? :-)

As pointed out quite a few times to you, thousands of radio amateurs use
morse daily despite what the "rest of the radio world" decides to do.

> >They surely do "affect" morse reception, but you were touting the
> >superiority of RTTY.
>
> Incorrect. I was simply pointing out that morse code telegraphy
> is the SLOWEST of all modes available to U.S. radio amateurs.

Incorrect. That isn't what you were doing. Since you don't use morse
and aren't a radio amateur, why do you worry about morse throughput?

> But, you cannot keep on the subject and must always attack
> the persons of those who disagree with you. Tsk.

You can't possibly realize how silly the above statement makes you look.

> >Those "home hobby ham stations" use RTTY too, Leonard.
>
> You don't, do you? :-)

Why, yes, I do.

> >I'm quite
> >familiar with the use of FSK. It is still effected by noise and
> >multipath distortion.
>
> ...and on-off keyed carriers are NOT so affected? :-)

By noise? Sure. By multipath distortion? Not much at all.

> >So, if I've got this right, we save on paper but spend on equipment.

> on this newsgroup? Morse code into your telephone line? :-)
>
> Tsk. So simple-minded you walked into that very visible trap
> like a blind man trying to bluff.

Some "very visible trap"! I regularly use morse from my car. I don't
have a PC in my car.

> >The fact is that while FEC can be of some help, it is still subject to
> >errors. It isn't a robust system like packet or Sitor/Amtor.
>
> ...and, to you, of course, manual morse code is without error. :-)

I've not stated such.

> Lacking a few received characters in morse? Why, just fill in the
> blanks. Who will know? :-)

One thing for sure: You won't.

> >I don't have much in the way of negative criticism for non-morse
> >communication methods, Leonard. Fact is, I use most of 'em.
>
> Of course you do...oh, yes, everything from facsimile to slow-
> scan TV. :-)

That's right.

> >Fact is,
> >on/off keying cuts it quite well in the communications world of now.
>
> By whom? Third- and fourth-world nations who don't have any
> capital monies to invest? :-)

By radio amateurs across the globe, those with CASH and those without.

> Face the facts. The rest of the radio world does NOT use morse
> code for communications.

Why this concern about what the "rest of the radio world" is doing?
Hams aren't required to follow other services.

> >That hasn't changed just because you aren't proficient in its use.
>
> TRY to stay focussed on the subject instead of (once more)
> launching into personalities.

Tell you what: You settle on a subject and perhaps we can do that...if
you can't keep from launching into personalities.

> TRY to understand that the rest of the radio communications
> world does NOT use morse code for communications.

Try coming up with a valid explanation as to why I should concern myself
with that.

> >Despite the statement above, your diatribe doesn't read like someone who
> >supports use of morse code.
>
> Tsk. You ARE seeing things that aren't there...

Incorrect. You've snipped them so they aren't there.

> >Did you confuse me with you there for a moment?
>
> Never happen. I know me. I know you. You do NOT know me.

Interesting that you believe you can know me without my knowing you.
I've read your stuff for nearly a decade.

> >Past tense?
>
> I'm using the Internet to send these messages. Whether that uses
> radio or other means is not an issue.

We'll never know. Your snippage removes any context.

> Except by your misdirection
> and seeing things that aren't there.

I can't see them. You snipped 'em.

> >That's a load of manure, Leonard. That isn't the "only" at all. It is
> >any radio amateur who uses morse and supports continuation of morse
> >testing. I, for one, couldn't care less if you decide to "emulate" me
> >or not.
>
> Irrelevant.

Very relevant.

> NO one cares to "emulate" you. :-)

You aren't in a position to know that. :-)

> >What YOU write here isn't the case simply because YOU write it. Radio
> >amateurs worldwide are using morse code daily for real communications.
> >That you don't approve doesn't change that.
>
> Again, irrelevant.

Very relevant. Why should radio amateurs follow the methods of

> At issue is the morse code TEST, not whether or not "Dave" or his ilk
> "use morse."

The issue, according to you, is that other radio services don't use
morse.

Do try to stay focussed.

> Note that USE has no real relation to the MORSE TEST.

I don't agree.

> Or do you spend all your amateur radio time "taking tests?" :-)

I'll spend my amateur radio time doing what I choose. You spend your
amateur radio time....Oh, never mind.

> >There isn't any "higher morse rate" testing.
>
> Isn't that awful...hi hi.

You seemed to think it an issue a couple of posts ago.

> >You aren't even involved.
>
> Tsk...with role models like the archtypical PCTA extra, who would
> want to be "involved" in amateur radio? :-)

Lots of folks want to and do. You haven't and won't.

> >It would really take an arrogant bully to
> >expect radio amateurs to swallow your view of how amateur radio should
> >be regulated.
>
> Tsk. I feel that the USA should have the FCC regulate amateur radio,

> law of 1996.

Poof! You've got your wish.

> >What do you know of the "fun" of amateur radio?
>
> Tsk. What do you know of "fun" in ANYTHING? :-)

I know all about the fun in amateur radio. I know quite a bit about the
fun in usenet. Couldn't you come up with a meaningful answer?

> >Well, there you have it--the opinion of one never involved in amateur
> >radio; one whom it would seem finds that five word per minute exam an
> >insurmountable obstacle to his entry into amateur radio.
>
> Tsk. Still seeing things that aren't there.

Not really. I just took a look at amateur radio. I didn't see you.

> Still tossing out personal pejoratives instead of discussing the subjects.
>
> THAT is the "fun" that appears in this amateur radio newsgroup. :-)

Why, Leonard, that is PRECISELY your mode of operation here on a regular
basis. I know. We're to do as you say, not as you do.

> >So you believe that all that goes on in HF amateur radio is the use of
> >morse? You don't seem to have any idea of what goes on.
>
> Tsk. You don't have any idea of how to discuss things civilly.

Why, Leonard. That is precisely your mode of operation here.

> >Petition your government for redress of your numerous grievances.
>
> I have. :-)

Don't get upset with me because the government hasn't seen things your
way.

> You don't like that. TS for you. :-)

I wouldn't mind if you petitioned government for something each and
every day of the remainder of your life.

> >Different interests? What are your "interests" in amateur radio, Len?
> >What do YOU consider "vital" to ham radio enjoyment?
>
> Freedom from the oppression of olde-tyme hammes insistent on
> ruling over all others would be a good start... :-)

Oppression? Ooooooh! Are you a victim now?

> Oh, tsk. That would eliminate you, wouldn't it? Can't have that.

No, you can't have that.

> You have to stay here and effect ethnic cleansing of U.S. amateur
> radio.

You aren't an ethnic group and you aren't in amateur radio.

> >You have to be in if you:
> >
> >1. want to partake in those things "vital to ham radio enjoyment".
>
> This was NOT a discussion about "partaking" in anything.

Why'dja snip the relevant portion, Leonard? I directly responded to
something written by you.

> >2. want to be seen as credible.
>
> Lets "Dave" out...he is INcredible. :-)

Couldn't you come up with anything original?

> >> The FCC regulates U.S. civil radio.
> >
> >You aren't the FCC.
>
> NEITHER ARE YOU. :-)

What's with the caps?

> >I'd have thought you'd have picked up on this one by now. Those people
> >are paid to regulate amateur radio. They are PROFESSIONALS.
>
> YOU are not a professional regulator...just an amateur one.

That's incorrect. I don't regulate amateur radio.

> >That's be another incorrect response. I'm a participant.

> >Participants are more important than regulators.
>
> Tell that to Congress. Have them change the Communications Act
> of 1934. :-)

No changes are needed. No regulators are needed where there are no
participants.

> >You're an old thing and I'm not demanding to keep you.
>
> Tsk. Again with the personal pejoratives. :-)
>
> So...you are "young?" :-)

Everything is relative, Leonard. I'm just a kid when compared to you.

> >> Are you going to STOP me?!? Oh, my. Tsk.
> >
> >Why, no. You do that. Consider yourself stopped by inertia.
>
> Tsk. You, repeat YOU, keep trying to stop me.

There, there, Leonard. I'll give back your study guides, repair your
practice oscillator and allow you access to the site where you can
download the appropriate forms.

Only your own failure to act keeps you from an amateur radio license.

> Your technique (word used instead of other nasty ones) does NOT
> work!

Oh? You mean you'll have that Extra "right out of the box" sometime in
the forseeable future?

> Sunnuvagun!
>
> >It has been pointed out on numerous occasions that no one has prevented

>
> Feel free to do your own seppuku. Nobody is stopping you... :-)
>
> >But you just can't force anyone to take
> >your stuff seriously.
>

> You aren't "anyone."

You may not like it but, yes, I am someone.

> You are the arrogant bully of the newsgroup,
> even better than the gunnery nurse. :-)

Actually, I believe that title is rightfully yours. You've earned it.

> >You attempt to push others around quite frequently.

You often confuse me with yourself.

> Tsk. You gods of radio seem to think you are inviolate. Nobody is
> supposed to say ANYTHING nasty to you dieties. :-)

Oh, here we go again. One time I'm a god. The next, I'm no god.
Fact is, I'm a radio amateur. You are not.

> >It's tough being
> >arrogant about amateur radio when you aren't actually a licensed ham
> >though.
>
> It's much much more arrogant when you ARE a licensed ham (either
> FCC or FDA) and you keep on trying to push folks around, strip
> citizens of their Rights such as the First Amendment. Tsk.

Funny that you mention the First Amendment as if your rights have
somehow been taken away. That view is as incorrect now as it was the
very first time you tried to sell it.

> >> First Amendment. Refresh your memory with what it means.
> >
> >It says that my right to free speech is equal to your own.
>
> Tsk. It does NOT say your right is in any way stronger than mine.

Yeah? And?

> Yet, throughout in here, that's what you keep on claiming.

Is it? You've written and written and written and written. I've not
attempted to prevent you from doing so at any time. I have often
ridiculed you and laughed at you. I intend to continue doing so.

>
> >It makes no
> >requirement for me to accept your views or to refrain from giving you
> >the raspberries.
>
> YOU would NOT come even close to accepting a contrary idea
> to what you hold... :-)

You have no way of knowing that. All that you can be certain of is that
I find your ideas on regulating amateur radio to be laughable. I find

you to be a peculiar oddity--a man obsessed with regulating that in
which he has no part.

> >You misread. I wrote that you have no experience in *amateur* radio.
>
> According to "Dave," one can't have ANY "interest in radio" without
> getting an amateur radio license! :-)

You've been corrected on this one a number of times. You persist in
writing the same thing. It is a lie.

> Wasn't any qualifier to the word "radio" when "Dave" wrote it. :-)

Yes, there certainly was.

> >> Heh heh heh heh. I'm a long-time veteran of computer-modem
> >> communications with a survivor's thick virtual skin. :-)
> >
> >Virtual skin? Is that like those "message knuckles" you wrote about
> >some time back?
>
> LIke I've seen lots of computer-modem bullies in the last 20 years.
> Most of those are gone. I'm still here... :-)

That doesn't fill us in on "virtual skin" or "message knuckles".

> >Well, you seem to have it on points over those who tired of your
> >nonsense and left, and over those whose respiration stopped. I'm
> >betting that I can outlast you.
>
> Anything is possible... :-)

Any many things are likely. :-)

> You are a god of radio. One of the Four Morsemen of this
> Apocalypse.

You seem to have some trouble making up your mind on the issue. There
is an archived record on the subject.

> >You probably lose some folks as soon as you start your "jump through the
> >same hoops" schpiel.
>
> Poor baby. Still can't get used to what others say of the morse
> test, can you? :-)

Poor baby. You can't get used to the idea that you'll have to climb
that 5 wpm mountain in order to partake in HF amateur radio.

> >You aren't yet a newcomer and you'll not be able
> >to jump through my hoops. They no longer exist.
>
> Incorrect.

Quite correct. I took a 20 wpm morse exam. It isn't possible for you
take it. I took and passed written exams for the Novice, General,
Advanced and Extra. It is no longer possible for you to do so. No
exams are given for two of those classes. Exams very different from
those taken by me are now being used to test for both the General and
Amateur Extra.

> But, it is impossible to get you to admit to an error.

I'd first have to make one.

> You are a god of radio and therefore inviolate.

No, I'm inwestvirginia.

> >I'm sure that it seems that way to a guy with an obvious inferiority
> >complex; a guy who sees demands in ordinary statements; a guy who views
> >the comments of those who don't agree with him as "arrogant",
> >"bullying", "imperious".
>
> Now, now, don't get upset...the mirror you are looking into when
> writing that has YOUR reflection! :-)

Can't be, Leonard. You're the guy who uses the terms "arrogant",
"bullying" and "imperious". You're the guy who sees simple statements
as DEMANDS. You're mistaken.

> >Now, watch it come to pass.
>
> Tsk. "Dave" keeps on with the personal pejoratives and gets all
> flustered when they aren't received well.

The only thing you could do to fluster me would be to swear that you
actually like them.

>
> Try to play with your Orion some more. Seriously, not trivially.
> Can't have a god of radio use equipment trivially. :-)

Irrelevant.

Anything in particular come to mind when you came up with that
statement?

> Toughen up a little, whydoncha?

I have. I have a low tolerance for your deliberate falsehoods. I
intend to call you on them when you write them here.

> > I don't believe either of you is very well known in DXing.
>
> Sorry, but it was not a "career goal" of mine.

It isn't a career goal of anyone. There is no way to make a living at
DXing.

No, you did no such thing. You did, however reveal yourself to be quite
naive in such matters.

> Later you say I didn't.

By "later" you mean that I didn't write that you didn't at the same time
you posted the comment?

> > > > > Work France on 6 lately?

Actually, that is another deliberately false statement. You are the
party who has made such statements.

> > > > I did work Iowa, Illinois, Michigan,

I know a number of Extra class licensees with WN callsigns.

> Often people volunteer what their amateur "status"
> is, such as "I'm a Novice."

I don't believe I've ever had a QSO where someone blurts out, "I'm a
Novice".

> That is another decent clue.

No, it isn't.

> Or, you
> might be told that they are operating out of band.

Did you mean that someone I'm working is going to offer up a gem like,
"I'm out of band" or that some little weasel who spends his time
checking to see if other stations are operating where they're permitted
to be is going to call me to say, "He's out of band; he's out of band!"?

> The real problem occurs when you know they are out of band, but just
> keep right on collecting those greenstamps.

No such "real" problem has presented itself to me. What is your worry
about "greenstamps"? Is this one of your fetishes like the use of the
Farnsworth method in morse testing or repeater clubs having dues?
Are you concerned that hordes of domestic 2 meter SSB ops are filling
my mailbox with dollars?

> > > Work any
> > > "out-of-the-box WN-prefix Extras?").

"Toughen up"...?!?!

You mean "Get used to our lying because we haven't even started
yet"...?!?!

> > I don't believe either of you is very well known in DXing.
>
> Sorry, but it was not a "career goal" of mine.

Whew! Sure glad to hear that. Because based upon what we HAVE
seen of your "DXing" skills, you, the Little Woman and the kids would
be homeless and hungry.

> > I'm sorry. That is incorrect. "William", "Brian" or "liar" would have

Why not? You've lied repeatedly. You ARE a liar.

> Get in line, I don't think Steve's done yet. And bring your lunch.

Stop lying, I'll stop calling you a liar.

It really is THAT simple.

> > My accusations? The accusation where I corrected your use of the term

YOU have not educated ANYone, Brain.

YOU have yet to show where YOU know what the laws are. Indeed,
there's not one shred of evidence that you've ever done the things you
claim you have.

> Later you say I didn't.

Because you haven't.

> Isn't your position

The FCC has not issued "Novice" callsigns since 1976. There are
quite a few folks with Extra Class and Advenced Class licenses with WN
prefixes.

There are also several 1x2's with General and Advanced Class
licenses on the books as of this date.

Stop while you are ahead, Brain.

K1MAN EDITORIALS -- WD4AWO (Dumbo Bobbie) KB1EVE aka WA1BHV (Summers Eve) When will the 500 lb Michael Moore look alike ND8V (November Dumbass 8 Vomit) chime in???

EDITORIALS

It is evident that Glenn is a maniac and needs to be studied while he is safely housed in a rubber room. However, he is one of very few individuals who have the necessary steel balls to stand up to Riley. Unfortunately for Glenn's response that his station is in compliance is totally ridiculous. On Monday, October 11, 2004 Steve - W7CI and I made repeated requests on 14.275 for the control operator to confirm that the K1MAN station was indeed in compliance with the following FCC Part 97 Rules:
97.105 (a) - Control operator duties
97.109 - Station control
As expected we received no reply from a control operator for the K1MAN transmissions. Therefore, since the K1MAN station is NOT in compliance any and all legal transmissions by amateur radio stations should not be harrassed by K1MAN or his entourage with threats of legal action, specifically the filing of Felony Affidavit Complaints.

73,
Bob WD4AWO

MHR Comment: Keep in mind, WD4AWO can't even address an envelope. Don't believe me, here's his QRZ BIO.

VIA U.S. ADDRESS ONLY
I DO NOT RESPOND TO ANY BUREAUS/QSL SERVICES
U.S. STATIONS INCLUDE SASE
OTHERS - SAE & IRC OR SAE/80 CENTS US POSTAGE
SAE IS IMPORTANT TO AVOID ADDRESS ERRORS
IT IS SAFER FOR YOU TO ADDRESS THE ENVELOPE
DO NOT INCLUDE ANY CALLSIGNS ON ENVELOPE
73,
BOB
Bio last modified: 2004-08-12

Believe it or nuts: I agree with my good friend WD4AWO. but I would say they are brass balls, not steel. Glenn is totally nuts!! I tried calling the 800 number and it took me 4 times to just leave a message. Forget when he broadcasts on 75, he just ain't there, Also, Rich has a point: But the

ARRL has been along since ham radio's inception via W1AW. Glenn has the money and the balls to say "why not me" K1MAN's broadcasts are very technical and promote ham radio and make an (other) attempt to intice young people to get bit by the Radio Bug. K1MAN makes an attempt to promote ham radio. That's a good response by a lawyer in front of an ALJ. Isn't that Riley's prime objective? To improve ham radio, and get rid of the international embarrassment due to 14313? It was complaints about '313 that pulled the heat on us.
Peace
WA1BHV
me in 07
and Hillery in 08.

MHR Comment: Getting rid of Summers Eve from 20M was a major improvement.

K1MAN RESPONSE:

Bulletin stations do not have to respond to callers on the frequency while the bulletins are being transmitted. Try calling W1AW! This IS NOT rocket science.

AARA and IARN do not have to answer the phone. We will call you back is we want to. The control operator of K1MAN can be anywhere in the world at a given
moment. This is a little closer to rocket science.
Hellllllllloooooooooooo!

73 and GL

Glenn/K1MAN

That's a good one! ;-)

The trouble is that those freeband freqs will probably be even worse than the
ham bands.

In article <J9ncd.6731$NX5.2656@newsread3.news.atl.earthlink.net>, "Bill Sohl" <billsohl@mindspring.com> writes:

> Did US rules change before Senate ratification?
>Hey Jim (N2EY), got your history of the FCC and ham rules
>handy?
>

I'll have to go look that one up for exact dates, but here's a general scheme of what happened:

At WARC-79, the allocation table was changed to allow amateurs access to new bands at 30, 17 and 12 meters. 30 meters was shared; I'll have to look up 12 and 17. But the changes did not take place instantly, because the then-current users of those bands had to be given time to move elsewhere, and the various governments had to be given time to amend their rules.

Most of all, however, signatory countries did not *have to* let their hams use those bands, nor was there any specific allocation of modes, power levels, license classes, etc.

Some countries moved quickly; the US less so. I recall ARRL repeatedly petitioning FCC to open at least some of the bands (12 meters?) because *years* had passed and some other countries had full access.

I don't recall that Senate ratification had anyhting to do with it.

With WRC-2003, the situation is somewhat different. Changes to S25.5 do not affect users of other services directly (nobody has to move). The change to the Morse Code test requirement is straightforward and simple:

Before WRC-2003, the treaty itself required code testing for an HF ham license, and FCC interpretation backed that up and referenced it as a prime and later only reason to keep Element 1.

After WRC-2003, the treaty requires code testing policy to be set by each signatory country. Each country's code-test policy can be anything that country wants it to be. No requirement to change anything, nor to retain anything.

Yet so far, the US rules are the same as they were on April 16, 2000 - four-and-a-half years ago almost exactly. Obviously this isn't a high priority to FCC.

What's odd is that in the R&O for 98-143, FCC specifically cited the treaty requirement as the one-and-only reason they kept Element 1. Yet they also refused the idea of a sunset clause that would eliminate Element 1 if the treaty requirement vanished.

15 months ago, I thought that Senate ratification would be an issue, but that's obviously not the case. I also thought FCC would just dump Element 1 without the whole NPRM cycle, but that's obviously not the case either. (And I'm gald to have been mistaken!)

Back in 2003, ARRL predicted two years (2005) before we'd see rules changes resulting from WRC-2003. Now ARRL says 2006 - three years.

So far, most of us who entered a date in The Pool have seen the date come and go with no action.

So what's going on? Some speculations (in order of wildness):

1) Perhaps FCC is simply doing the NPRM cycle. With over a dozen proposals out there, thousands of comments and reply comments, and limited resources, it simply takes FCC a while to decide what to do.

2) Perhaps FCC has looked at the comments, seen how much widespread support Element 1 has, and is not about to do anything at all.

3) Perhaps the whole issue is simply not a big deal to the FCC. The existing test, complete with all the authorized accomodations, just isn't that hard for most people to pass. (Remember that VEs can do all kinds of things in the line of accomodation, even replacing the receiving test with a sending test).

4) Perhaps, as Mike suggests, this administration isn't big on paying attention to treaties. Look at the flip-flop on support for the Kyoto treaty back in 2001.

5) Perhaps FCC is more focused on BPL, Howard Stern and Janet Jackson than on requirements for a ham license.

(Devil's Advocate mode = ON)

6) Perhaps FCC has bought the claim that the code test reduces growth in the ARS, and is keeping it in place for just that reason (!) After all, the vast majority of opponents to BPL have been hams and ham organizations. Why do anything to increase our numbers - particularly on HF?

(Devil's Advocate mode = OFF)

Take your pick!

So? What is your point, Len?

Nobody but FM broadcaster uses the stereo multiplex system developed over a
half-century ago by Armstrong.
>
>>That hasn't changed just because you aren't proficient in its use.
>
> TRY to stay focussed on the subject instead of (once more)
> launching into personalities.

Gee, Len, you launch into other people's personalities all the time. ;-)

And the word is spelled "focused".

> TRY to understand that the rest of the radio communications
> world does NOT use morse code for communications.

Why is that important to amateur radio, Len? You repeat that statement over and
over like a mantra, but never explain its significance.

I don't think any other radio service still uses 5 level FSK Baudot for radio
communications either. Nor PSK-31.
>
>>Despite the statement above, your diatribe doesn't read like someone who
>>supports use of morse code.
>
> Tsk. You ARE seeing things that aren't there...

Right - you don't support the use of Morse Code. You'd ban it from ham radio if
you could.

>>"Arrogant thundering" = any disagreement with your views.
>
> You can't stay focussed on the subject. All you can do is act
> the thunder mug on anything I post. :-)

I care to emulate K8MN.

Let's see....

IIRC, he's retired, living in a beautiful area of his choice, with a wonderful loving family, a great home and ham station, and the time and resources to persue multiple interests.

I'll follow that lead any day.

>>What YOU write here isn't the case simply because YOU write it. Radio

The standard procedure for mitigating PL noise around here is to (a)
Don't even bother with the FCC. (b) Take it straight to the PA state
Public Utilities Commission. Which has a bunch more clout in the power
biz than the FCC has and they take PL noise problems seriously and are
rather effective at making it go away.

Rest snipped.

Same typo repeated over and over. According to Lennie's Newsgroup Rules
of Engagement, a typo is an indicator that the respondant is "mad".

Until Lennie calms down, I say we not talk to him any more.

It is also a nice location for peace and quiet, for hunting, for
astronomy and for being near a population of ordinary folks.

> Happens to be in WVA but could be
> anywhere.
> Dave could probably live in SoCal if he so desired, but he doesn't.

Southern California would be far down my list of desireable places to
live. It does top Manhattan on my list. I had no desire to locate near
any large city. From my place, I can see three homes, none closer than
about 100 yards.

> >
> Dave, why do you say that about Len? He's not describing the Southgate Type 7,
> because it doesn't fit his definition of a "kluge".

No, it doesn't fit his provided definition but that hasn't stopped him
from attempting to force-fit it to his definition. He wasn't paying you
a compliment. His definitions of amateur radio and the ARRL aren't

accurate either. He hasn't allowed that to stop him from painting a
false picture of either.

> What's most noteworthy is that while Len sits in judgement of what others do,
> he hasn't presented any homebrew radio projects of his own. You'd think a
> retired guy with a home shop and all his claimed experience, know-how and
> critical addy-tood would have built *something*.

C'mon. You'd think that a guy who has declared a several decades
interest in amateur radio would have obtained an amateur radio license.
He certainly could have done so in the years he has been posting here.
He could have done so in the years since his embarrassing "Extra right
out of the box" boast. Suddenly, he claims that I'm keeping him from
obtaining a license.

> But we see nothing at all from Len. Heck, he can't even solve a simple
> heterodyne design problem.

I'm sure that he's seen your challenge as a DEMAND. Len doesn't do
DEMANDS.

> You've heard my homebrew rigs, Dave - did they sound any different from "state
> of the art" rigs?

No, not at all. There was no drift, no chirp, no warble, no clicks.
Now that I think of it, some of the more expensive commercial rigs have
a reputation for key clicks. The Yaesu FT-1000 MP and variants come to
mind. Some of the expensive commercial rigs also transmit really ugly
phase noise components. They were designed by PROFESSIONALS.

Len asks things about what others have built or designed. When he
receives a response, he heaps insults on the equipment offered in
evidence. Though Len isn't a ham, he can build electronic item his
little heart desires. There is no indication or even a statement from
him that he has done so. Radio amateurs have the legal right to use
their homebrew equipment or to use modified commercial equipment on the
bands. They can do these things without the need for becoming
PROFESSIONALS or having their work checked by PROFESSIONALS.

Dave K8MN

699. I need a 10,000 amp 12 volt supply

Newsgroup: rec.radio.amateur.policy

I am building an 80,000 watt amp using 2sc2879 transistors, and need a really heavy duty power supply. Anyone know of any vendors who can supply this? Size is also an issue. I need one that is no bigger than a shoe box. After building the amp, I don't have much room left in here. The heat sink is taking up one entire wall, and the 15 ton AC unit pretty much takes up the rest.

Brother Stussy is on a jihad to expose the infidels for who they really are. The infidels did not have the journalistic integrity to check their facts and report both sides of a continuing story first aired in mid-2000. Brother Stussy is attacking the infidels on all fronts (including finances and netiquette) until the infidels confess their sins against their listeners. Then the truth will set them free from Brother Stussy's wrath.

So sayeth we ...

Bill, they still do... :-)

What was in the past when the present made their rank/status/
privileges must continue on indefinitely. If changes occur, then
their status, etc., will diminish. In their eyes, at least. :-)

On the "Congress must approve any 'treaty'" matter - Tsk, I
thought that the FCC could go right on making their own rules
without needing Congressional approval. They certainly do
over in the International Bureau in regards to tariffs with
international communications service providers. The WRC
administrative team (voting) is made up of the Department of
State, the National Telecommunicaitons and Information Agency,
and the Federal Communications Commission. They represent
the United States to the International Telecommunications Union.
Seems to me that they've done a whole heap of other radio
service decisions without a single "need" for Congressional
approval on amateur radio matters. ?

Heh, I'm sure that someone else in here will go ballistic on that
and make all sorts of "outraged" noises. :-)

Probably. But I'm not going to play the "my wallet's bigger than yours" game.
Personal worth and net worth are not at all comparable.

Besides - suppose I *did* play that game - and won. Suppose my financial
situation turned out to be better than Len's. Would it make any difference to
any amateur radio policy issue, or Len's behavior?

>> >I didn't see any statement about someone else having money, Leonard. We

>I don't think that'd turn the trick, Jim. You'd have to be able to
>prove to Len that you bought it for CASH.

Even if I bought one of each for CASH and could prove it - would it make any
difference?

I don't think so.

A lot of noise has been made about "state of the art". I don't ever recall
describing any of my projects as being "state of the art". They're just radio
projects I built to serve a need. And they do, without costing a lot of money.

I think that really bothers ol' Len. In some ways I'm his worst nightmare,
because I disprove so many of his pronouncements. For example, he can go off
about how hams are "appliance operators" - and then someone points out that
hams like me are still homebrewing entire stations.

Perhaps that's the real reason for his intense hatred of Morse Code. Its
popularity makes it possible for more of us homebrewing hams to exist. How many

hams would homebrew if their first project had to be an SSB transceiver?

>> >> A kluge is a kluge. A picture of one speaks for itself.

>obtaining a license.

Well, in a twisted sort of way you are, Dave. Me too. Even Kim is part of it (look how her one little post about Morse Code *use* caught Len hook, line and sinker)

By bothering to answer Len's frequent postings, and pointing out his errors, we keep Len occupied here. By commenting to the FCC, we keep him busy writing comments and reply comments. And by using and enjoying Morse Code, we make him fussy as a wet hen.

The Type 7 photo - just one little low-res photo taken by an old Kodak DC-40 - has kept him tied up for some time. (He hasn't even found the other photos of Southgate Radio projects that are out there on the web).

btw, some months ago I got a Canon A80 digital camera. New - for CASH...
>

I think you can find a 12V capacitor with enough Farads to provide
that sourt of current, ... for a few microseconds.

Ed

706. operator's licence vs. station licence

Newsgroup: rec.radio.amateur.policy
Date: 2004-10-17 18:12:24 UTC
From: Dan Jacobson <jidanni@jidanni.org>
Message-ID: <87is995i47.fsf@jidanni.org>
Source record: 98558

How many countries have two kinds of licences: operator's licence and station licence? You only get your callsign (station licence) after you bring your rig in for inspection, whereupon you are granted a callsign whose letter reflect the level of operator's licence you have achieved. Taiwan is one.

This seems like a commercial radio concept dragged over into ham radio. One would think one equipment approval would be enough too, as all rigs on the market already have local FCC approval.

708. BPL - Legal recourse?

Newsgroup: rec.radio.amateur.policy
Date: 2004-10-17 18:19:30 UTC
From: Ed <Huckleberry_REMOVE_@bigvalley.net>
Message-ID: <Xns958573402ACE8spectrumhogstarbandn@207.106.93.175>
Source record: 98556

Although a few BPL providers seem to be bailing out, there seems to be a growing trend of new ones coming on line. The ARRL has asked the FCC to shut down immediately a few of the cronic offenders, but with no reaction from the FCC.

The only recourse I see to this issue is Legal Action, against both the offending BPL provider, and possibly the FCC for failing to uphold their own regulations.

Has anyone heard of a ham preparing to take this matter to the courts?

Ed

By how much? Give us all the benefit of your long experience in commercial HF communications and demonstrate the total uselessness of RTTY as compared to mighty morse code.

>> All the rest of those radio services that once used morse have
>> dropped it for communications purposes.
>
>Not all. Almost all. And so what? They are not amateur radio.

Amazing...Rev. Jim finally appeared out of his haze and admitted that other radio services exist!

>Should hams stop using Morse Code?

No.

Should the FCC keep on testing for morse code just because some amateurs "still use it?"

>> Then there are a number of radio services which never bothered
>> with any morse code when they began.
>
>So what?

Tsk. It should really hurt the egos of mighty macho morsemen to know that many radio services just never bothered with morse code when they began. Tsk, tsk...all that flouting of "tradition" from when on-off keying was the ONLY way to communicate by radio!

>> But, you will then "argue" that "this is amateur radio" as if it was
>> a haven, shrine, or religious temple for morse code and that all
>> amateurs MUST test for it...won't you? :-)
>
>You are confused between "test" and "use".

Tsk, tsk. NO confusion. :-)

>Morse Code is *not* the "SLOWEST of all modes available to U.S. radio
>amateurs."

Awww...now you are thinking that my statement was a "direct
personal attack" on your mighty morsemanship? :-)

Is manual morse code faster than 100+ WPM data?

Is manual morse code faster than the spoken word?

If you answer "yes" to either, show your work. Preferrably on a home
page using recycled pixels. :-)

>Nobody but FM broadcaster uses the stereo multiplex system developed over a
>half-century ago by Armstrong.

Hello? Ol' Ed developed the "L+R, L-R on a subcarrier" method of
present-day FM stereo sound broadcasting? Tsk, I don't think so.

Rev. Jim is getting too much like his buddy, the gunnery nurse. :-)

>And the word is spelled "focused".

Try not to use dirty words in here. The children might object. :-)

>Why is that important to amateur radio, Len? You repeat that statement over
>and over like a mantra, but never explain its significance.

Tsk, tsk. I never once thought I could get dyed-in-the-wool (before
their eyes) morsemen to think their ultra-favorite mode was
(shudder!) "inferior" to anything else! :-)

>Right - you don't support the use of Morse Code. You'd ban it from ham radio
>if you could.

Tsk, tsk, TSK. Trying to put words in other people's opinions?

Nasty lie, jungle Jim. You swung on the wrong vine again...

>You posts often look like, and contain, the contents of said mug.....;-)

Tsk, tsk. Direct personal attacks again.

Yup, jungle Jim left his taxi to join the gunnery nurse...

>I care to emulate K8MN.

Keep us informed on which embassy post you get...bye...

>Then why are you here, Len?

Just advocating the elimination of the morse code test for any
amateur radio license. :-)

Tsk. More political spin. :-)

All other modes BUT morse has errors. An absolute. Yet you say
morse "isn't necessarily free of error." :-) A decided qualified non-
statement.

Anyplace else but in PCTA haven, such antics would be called
"sinning by omission."

>> I made no remark about "introducing Swahili dialects." You did.
>
>Your response was equally irrelevant.

Tsk. You tried to introduce "Swahili" in here. I didn't. :-)

>> Tsk. Are you saying that TTY "introduces a time lag" now?
>
>We'll never know. You snip the relevant portions.

In Heilian logic, that's "not necessarily relevant." :-)

>I have no interest in educating the rest of the radio world in anything.

Riiiight. All should revere and respect you because you Are.

>> All the rest of those radio services that once used morse have
>> dropped it for communications purposes.
>
>So? What is that supposed to mean for the service which uses it
>commonly and regularly?

Tsk. You can't see the relevence, your reverence? :-)

Morse code just doesn't have all the attributes that lie like urban
myths in the brainwashed minds of hams. It isn't faster than any
other mode, isn't error-free...all it is is a throwback to the pioneer
times of the first radios, far before the existance of anyone in this
newsgroup.

>> Then there are a number of radio services which never bothered
>> with any morse code when they began.
>
>Did you have a point?

Yes, I borrowed Amstrong's lance. [nice sharp point at the end]

>> But, you will then "argue" that "this is amateur radio" as if it was
>> a haven, shrine, or religious temple for morse code and that all
>> amateurs MUST test for it...won't you? :-)
>
>As pointed out quite a few times to you, thousands of radio amateurs use
>morse daily despite what the "rest of the radio world" decides to do.

Well, isn't that spay-shul? :-)

So...because morse is the distant second-most used mode on HF
by hams, the FCC *must* test for it in order to get an amateur radio
license with HF privileges?

Most strange. There is NO other mode allocated to amateurs which
requires a separate pass-fail test for manual operation.

Ah, but YOU had to take that morse test to achieve your rank, status,
and privilege...therefore all others must do as you did.

>> Incorrect. I was simply pointing out that morse code telegraphy
>> is the SLOWEST of all modes available to U.S. radio amateurs.
>
>Incorrect. That isn't what you were doing.

Tsk, tsk, tsk. It was very correct. You are incorrect.

>Since you don't use morse
>and aren't a radio amateur, why do you worry about morse throughput?

More tsk. I don't "worry" about it. I KNOW by example of history
of radio and seeing it used, hearing it used, that morse IS the
slowest form of communications allocated to hams for communications
pursposes.

>> But, you cannot keep on the subject and must always attack
>> the persons of those who disagree with you. Tsk.
>
>You can't possibly realize how silly the above statement makes you look.

Tsk, tsk. What I said is true. Denial of your own arrogant tactics,
of bullying, doesn't help you...but you keep on denying them even
though all other readers can see it.

>> Lacking a few received characters in morse? Why, just fill in the
>> blanks. Who will know? :-)
>
>One thing for sure: You won't.

Tsk, tsk. That's any easy thing to prove by recordings at both end
of a bad radio circuit relying on manual morse. :-)

But...mighty macho morsemen think that they are SO spay-shul
that they can claim anything they want to to non-morse persons
and get away with it. :-)

>Why this concern about what the "rest of the radio world" is doing?
>Hams aren't required to follow other services.

They don't seem to. They seem to regard amateur radio as having
its own distinct laws of physics, different from other radio. They
seem to think that discussion about federal regulations on amateur
radio should be forbidden to non-amateurs!

They seem to think that the First Amendment Rights don't belong
to non-amateur-licensed U.S. citizens.

>Tell you what: You settle on a subject and perhaps we can do that...if
>you can't keep from launching into personalities.

Tsk, tsk, tsk. YOU jumped into this thread ranting and raving
about "not having an amateur license" in a remark I wrote to Kim.

Your usual diatribe has been noted by all other readers and
recorded at Google message archives.

>> TRY to understand that the rest of the radio communications
>> world does NOT use morse code for communications.
>
>Try coming up with a valid explanation as to why I should concern myself
>with that.

No need to expect the impossible. Your royal mind is made up.
It is unchangeable. :-)

>> Tsk. You ARE seeing things that aren't there...
>
>Incorrect. You've snipped them so they aren't there.

Tsk. You are STILL seeing things that aren't there... :-)

>> I'm using the Internet to send these messages. Whether that uses
>> radio or other means is not an issue.
>
>We'll never know. Your snippage removes any context.

Tsk. I never introduced the communications methods used by
the Internet. One thing for sure, the Internet doesn't use any
manual morse for communications! :-)

>I can't see them. You snipped 'em.

"If thine eye offend thee, cast it out..."

>Very relevant. Why should radio amateurs follow the methods of
>unrelated services?

Tsk. Then why do radio amateurs require all the formalism of
"correct" methods, "correct" jargon, even the "official radiogram"
forms sold by the ARRL? :-)

Tsk, tsk...all the play-acting the professional in amateur comms
as if deviation from that would mean loss of a job! :-)

>> Note that USE has no real relation to the MORSE TEST.
>
>I don't agree.

That was understood. :-)

>> Or do you spend all your amateur radio time "taking tests?" :-)
>
>I'll spend my amateur radio time doing what I choose. You spend your
>amateur radio time....Oh, never mind.

:-)

>> Tsk...with role models like the archtypical PCTA extra, who would
>> want to be "involved" in amateur radio? :-)
>
>Lots of folks want to and do. You haven't and won't.

Define the numerical quantity in "lots." :-)

Tsk. Look at the published numbers from the FCC databasee. You
will find that the non-morse-test licensees have grown far more than
all the morse-tested licensee numbers...and that continues to grow.

You don't accept that any more than a "renowned historian" in here accepts it. You must defend your imperial territory of rank/status/ privilege via passing a 20 WPM morse test.

>I know all about the fun in amateur radio. I know quite a bit about the
>fun in usenet.

Tsk. Not demonstrated in here.

>Not really. I just took a look at amateur radio. I didn't see you.

Wow! One glance and his imperiousness sees ALL!

Superhuman. [gods of radio are like that...]

Tsk. Still trying to forbid First Amendment Rights to U.S. citizens, aren't you?

Ave, Imperator!

>Is it? You've written and written and written and written. I've not
>attempted to prevent you from doing so at any time. I have often
>ridiculed you and laughed at you. I intend to continue doing so.

I didn't expect you to do anything else. :-)

Sociopaths usually use that rationale to excuse their behavior.

>> According to "Dave," one can't have ANY "interest in radio" without
>> getting an amateur radio license! :-)
>
>You've been corrected on this one a number of times. You persist in
>writing the same thing. It is a lie.

Tsk. I've not been "corrected." "Dave" tried to back-track from what he originally wrote that anyone having an "interest" in radio would or should get an amateur radio license first. :-)

Apparently some of the old State Department so-called "diplomacy" had rubbed off since "Dave" doesn't admit to errors he openly made. "Dave" always explains that "Dave" is "correct" in whatever he does.

>You seem to have some trouble making up your mind on the issue. There
>is an archived record on the subject.

I have no problem at all on eliminating morse code testing. I advocate its elimination.

I have no problem at all on recognizing bullies and sociopaths viciously defending their alleged "honors" in rank/status/privileges achieved by passing a 20 WPM morse code test. There are several in here. :-)

>Poor baby. You can't get used to the idea that you'll have to climb
>that 5 wpm mountain in order to partake in HF amateur radio.

Tsk. You keep saying that one MUST "demonstrate" willingness to be licensed in amateur radio?

To whom? To some dead-in-the-mind PCTA extra?

PCTA extras do NOT regulate U.S. amateur radio. They never did.
But, they keep thinking they do. :-)

>Quite correct. I took a 20 wpm morse exam. It isn't possible for you
>take it.

Incorrect. I could still take a COMMERCIAL radiotelegraphy license
test for 20 WPM. I have NO desire to do so, but the USA allows
that option. Tsk, for an ex-federal employee you seem strangely
unaware of licensing according to Part 2 of Title 47 C.F.R.

>I took and passed written exams for the Novice, General,
>Advanced and Extra.

Are you expecting to be a guest of honor at the Kennedy Center
for doing so?

>It is no longer possible for you to do so.

Ave, Imperator! [old Roman statement roughly translatable to
"no s**t?!"]

>No exams are given for two of those classes. Exams very different from
>those taken by me are now being used to test for both the General and
>Amateur Extra.

...therefore YOU are a "superior" ham.

Here, I give you a AAAAA grade as a ham according to FDA regs.

>> But, it is impossible to get you to admit to an error.
>
>I'd first have to make one.

Gods of radio NEVER make errors. They even say so... :-)

>> Try to play with your Orion some more. Seriously, not trivially.
>> Can't have a god of radio use equipment trivially. :-)
>
>Irrelevant.

No, I'm being oscarlevant. :-)

This is the system in Spain, although they only have to write a description of their station to get the station licence (and, of course, pay an additional fee!).

US military enclaves (Guanatanamo, etc, can't remember all of them right now) all have the same system.

One advantage in both of those systems is that a licence issued anywhere in the world is accepted as the operator's licence. Other than that, it does seem terribly redundant.

You might want to read this first:

http://www.technewsworld.com/story/37378.html

In short, despite the FCC's cheerleading of BPL, it is almost certainly
not going to fly. It offers nothing not already provided in a better
fashion by other, superior services.

And quite frankly, it would be foolhardy to consider any legal action
before seeing the outcome of the election.

A typical efficiency is about 50%, possibly less at these current levels, so figure14000W input, or 1000A at 14V? I'm going to bet that there's some significant I^2R loss in that system.

Of course on the new car systems with the higher voltages, things will get a lot easier.

I have talked to the Alabama PSC on two occassions, once in Sep of 02, then in Jun of 03. I recently sent a letter to them.

They are not doing much as far as I can see.

What we can do is if we live in an area served by BPL, to make an official complaint as soon as we hear an interfereing signal. THAT will be addressed. Coffin nails so to speak. Iff the FCC ignores tat, they might as well ignore all RFI complaints.

I wonder what happens when BPL starts interfereing with BPL? 8^)

Thanks all! I was able to get a handle on the insulator size. I made
the new ones, and put the antenna up this afternoon. Now I just need to
hook up the ground wires and tune 'er up. This winter I'll be doing a
lot of comparison between the new one and my OCF dipole.

I believe it is. Dave has described his home as a "tar paper shack."
That might be the difference between a career as an Engineer, and one
as a public ham servant.

Da Judge told Len that he must retire in 6-land. No Manhattan, no
EPA, and no tar paper shack in WVA. It was forced on Len.

Sheesh. Is there a point in any of this?

More like a WELDER, GENERATOR or, one hell of an extension cord!
and, the antenna would need to be about 5 inches in diameter
to keep from melting!

>
> This seems like a commercial radio concept dragged over into ham radio.
> One would think one equipment approval would be enough too, as all
> rigs on the market already have local FCC approval.

The FCC had some strange license concept like this years ago.
Lately they changed it to match most hams' thinking. That the
callsign is associated with the person. Most hams, when visiting
a friend ham and borrowing the shack, would use his own call.
That he would "inspect" the equipment ("yes, it looks like a
Kenwood") and uses it.

Back in the olden days, two brothers living at the same house
got their ham licenses. But the FCC, seeing the same address,
made them share the same callsign, as they shared the same shack.

When was the last time a ham was busted for bad equipment?
All the NALs I've seen are for some stupid *use* of equipment
(jamming a repeater, dirty words, broadcasting, pecunary
interest violations, and such) or a lower level licensee
caught in say the extra portion of 20m. And one has to
work at it to get a NAL it seems. An occasional error
will usually pass unnoticed; the FCC figures that most hams
will spot the error and correct it themselves.

Why is one "hard pressed" to find the newsgroup charters? Put "rec.radio.amateur guidelines" into google.com's search engine and see that there are at least five sites that have them..... Or is that beyond your capability?

743. K1MAN EDITORIALS -- WD4AWO (Dumbo Bobbie) KB1EVE aka WA1BHV (Summers Eve) When will the 500 lb Michael Moore look alike ND8V (November Dumbass 8 Vomit) chime in???

K1MAN EDITORIALS -- WD4AWO (Dumbo Bobbie) KB1EVE aka WA1BHV (Summers Eve) When will the 500 lb Michael Moore look alike ND8V (November Dumbass 8 Vomit) chime in???

EDITORIALS

It is evident that Glenn is a maniac and needs to be studied while he is safely housed in a rubber room. However, he is one of very few individuals who have the necessary steel balls to stand up to Riley. Unfortunately for Glenn's response that his station is in compliance is totally ridiculous. On Monday, October 11, 2004 Steve - W7CI and I made repeated requests on 14.275 for the control operator to confirm that the K1MAN station was indeed in compliance with the following FCC Part 97 Rules:
97.105 (a) - Control operator duties
97.109 - Station control
As expected we received no reply from a control operator for the K1MAN transmissions. Therefore, since the K1MAN station is NOT in compliance any and all legal transmissions by amateur radio stations should not be harrassed by K1MAN or his entourage with threats of legal action, specifically the filing of Felony Affidavit Complaints.

73,
Bob WD4AWO

MHR Comment: Keep in mind, WD4AWO can't even address an envelope. Don't believe me, here's his QRZ BIO.

VIA U.S. ADDRESS ONLY
I DO NOT RESPOND TO ANY BUREAUS/QSL SERVICES
U.S. STATIONS INCLUDE SASE
OTHERS - SAE & IRC OR SAE/80 CENTS US POSTAGE
SAE IS IMPORTANT TO AVOID ADDRESS ERRORS
IT IS SAFER FOR YOU TO ADDRESS THE ENVELOPE
DO NOT INCLUDE ANY CALLSIGNS ON ENVELOPE
73,
BOB
Bio last modified: 2004-08-12

Believe it or nuts: I agree with my good friend WD4AWO. but I would say they are brass balls, not steel. Glenn is totally nuts!! I tried calling the 800 number and it took me 4 times to just leave a message. Forget when he broadcasts on 75, he just ain't there, Also, Rich has a point: But the

ARRL has been along since ham radio's inception via W1AW. Glenn has the money and the balls to say "why not me" K1MAN's broadcasts are very technical and promote ham radio and make an (other) attempt to intice young people to get bit by the Radio Bug. K1MAN makes an attempt to promote ham radio. That's a good response by a lawyer in front of an ALJ. Isn't that Riley's prime objective? To improve ham radio, and get rid of the international embarrassment due to 14313? It was complaints about '313 that pulled the heat on us.
Peace
WA1BHV
me in 07
and Hillery in 08.

MHR Comment: Getting rid of Summers Eve from 20M was a major improvement.

K1MAN RESPONSE:

Bulletin stations do not have to respond to callers on the frequency while the bulletins are being transmitted. Try calling W1AW! This IS NOT rocket science.

AARA and IARN do not have to answer the phone. We will call you back is we want to. The control operator of K1MAN can be anywhere in the world at a given
moment. This is a little closer to rocket science.
Hellllllllloooooooooooo!

73 and GL

Glenn/K1MAN

Have you done anything about any of this yet?

Have you taken any action to stop any of this alleged wrongdoing?

C'mon! The penal code? What action have you taken in regard to Bill
Pasternak?

If we had some bread, we could make sandwiches....if he had some meat.

I take it that you're still limiting your action to newsgroup rants.
This looks like a crusade with no beginning and no end.

Each individual licensed by the FCC has both an operators license and a station license --- see &#65533;97.5(b)(1). The are granted on the same document and run concurrently, but there are two separate licenses granted.

Not to any government agency. However, I'm still soliciting comments.
Comments by people local to the Los Angeles area come with quite a different
conclusion - one that indicates that they believe I may be correct.

Supposedly, ARN "reads" this group, so they know what is being discussed. If
they were to change their public statements about what donations are for, then
my issue with them would be rendered moot. Tell me why I shouldn't be
reasonable and wait for a small period of time (while the discussion continues)
to see if they change?

Fraud is a felony. That's where it's defined. Just what did you think we were discussing?

Since you don't live in the Los Angeles area, you can't see what other actions I may have taken.

Tsk. Poor baby. It isn't spin, much less political :-) :-)

> All other modes BUT morse has errors. An absolute. Yet you say

> statement.

I wrote what I intended to convey. If two morse ops exchange
information for two hours without an error, their communication is error
free.

> Anyplace else but in PCTA haven, such antics would be called

If this were anywhere else, nobody would likely be discussing this at
all.

> >> I made no remark about "introducing Swahili dialects." You did.

No, you didn't. You tap danced all over the place.

> >I have no interest in educating the rest of the radio world in anything.
>
> Riiiight. All should revere and respect you because you Are.

How does my lack of interest in educating the "world of radio" equate to
a desire to be revered and respected? I'd think I'd merit much more of
that for educating the "rest of the radio world".

I can't see what isn't there :-)

Under certain propagation conditions, CW can outperform RTTY. I've
personally experienced severe multipath echo where a morse circuit was
operating normally while RTTY machines were printing gibberish.

So, you hadn't any real response.

That's right.

> Most strange. There is NO other mode allocated to amateurs which
> requires a separate pass-fail test for manual operation.

There wasn't any such exam even back when the only two modes in use were
CW and AM phone. So?

> Ah, but YOU had to take that morse test to achieve your rank, status,
> and privilege...therefore all others must do as you did.

You are particularly thick these days. Others (read newcomers) not only
aren't required to do as I did, they can't possibly.

> >> Incorrect. I was simply pointing out that morse code telegraphy

Ah, non, non, non, Gaston. You are incorrect.
>
> >Since you don't use morse
> >and aren't a radio amateur, why do you worry about morse throughput?
>

Your voluminous output here suggests otherwise.

> I KNOW by example of history
> of radio and seeing it used, hearing it used, that morse IS the
> slowest form of communications allocated to hams for communications
> pursposes.

Seeing morse doesn't do much. Hearing it if you can't copy it, does
even less. I've seen voice ops take more time to exchange information
than morse ops, especially in dealing with formal message traffic.

Thanks for the giggles, Leonard. You keep describing your own actions
and attributing them to others.

> >> Lacking a few received characters in morse? Why, just fill in the

> >
> >One thing for sure: You won't.
>
> Tsk, tsk. That's any easy thing to prove by recordings at both end
> of a bad radio circuit relying on manual morse. :-)

Not if you and guy with like morse skills are at the ends of the
circuit, it won't be easy. :-)

> But...mighty macho morsemen think that they are SO spay-shul
> that they can claim anything they want to to non-morse persons
> and get away with it. :-)

Well ya see, Foghorn, it's like this: A morse op can pretty much do
that with someone like yourself. Anyone with a skill has it all over
someone who lacks that skill. That's a good reason for a guy to develop
as many skills as he can in this life. You seem to be lacking several
of 'em.

> >Why this concern about what the "rest of the radio world" is doing?
> >Hams aren't required to follow other services.
>
> They don't seem to. They seem to regard amateur radio as having
> its own distinct laws of physics, different from other radio.

Not different physics, Leonard. Different methods of operation in
pursuit of different goals. HF amateur communications aren't much like
the old military point-to-point circuits you are familiar with.

> They
> seem to think that discussion about federal regulations on amateur
> radio should be forbidden to non-amateurs!

There is no indication that "they" do that. I, however, note that
you've had ample opportunity (and Lord knows you've taken the
opportunity) to present your ideas. Those ideas are based on your very
limited knowledge of and exposure to amateur radio. I don't think your
ideas are very sound. Take your couple of ideas about amateur radio
regulation and couple them with your litany of insults directed toward
amateur radio operators and toward the ARRL; toss in your unique ability
to grate on folks and maybe you can see why you haven't brought more
people around to your way of thinking.
